Yes and I propose we give them an authority for civil forfeiture of
the property of suspected miscreants. Issue them guns and the right to
use them. Then anyone possesing illegal manuals and/or illegal radios
can be prosecuted to the full extent of the law. I propose life
imprisonment for the first offence and death for the second. That
would put a stop to this sort of thing pronto. Or it could make it
profitable again to be a radio repair person.

I upgraded my cell phone, the old one will dial 9111 and if you want to
use a credit card, you can make outgoing calls also.

From: Dean <DLambo55@tir.com>
Message-ID: <3432CF98.4A04@tir.com>
Source record: 184411
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Recently while searching I found cell conversations on my TrunkTracker in the 816.000 thru 823.000 area. I know these are not "ghosts" or images from the 868.000-890.000 cell band. Has the FCC opened up a new area of the spectrum for cell use????

> > Page? Thanks, Alan

Hopefully by the time you get this everything will be OK.

The server I use had an unexpected address change. Until the
new IP address circulates to all the name servers, QSL.NET
will not be a recognized address. Instead try 209.60.242.81.
So my main radio page would be http://209.60.242.81/n2mca/RADIO.HTM

Good luck and happy monitoring!

Strong signals,

Its funny... AES is the HIGHEST PRICED STORE but they claim to buy in
bulk to pass the savings to You. If you check the prices at ROSS
DISTRIBUTING or TEXAS TOWERS You will see you are overpaying. Whats more
is the Lousey Return Policy.
Lets review: AES= highest $$$, worst return policy,claims big buying
power. HMMMMMMMM

I think the important piece here is that the FCC has "requested" this policy(according to above verbage). Possibly because they know they have no chance of enforcing it.

I have a bigger problem with Radio Shack if they do intend on complying with this "request". Talk about totally gutless. I guess Radio Shack figures the FCC buys all of its scanners and not us so it should therefore comply with their wishes.

The FCC is simply being a spineless whore for the CTIA if this is true. Money talks ladies and gentlemen.

Can't say much better about RS. If any of the other radio manufacturers are gullible enough to fall for this crap then we have only seen the beginning...

For sell pro 43 scanner with cell mod. Case is in fair shape.
comes with original box,service manual and six ni-cad batteries. $175.00
or best offer.Visa/MC accepted.

thanks
Tom

21. Antenna Problems; Maybe?

Newsgroup: rec.radio.scanner
Date: 1997-10-01 00:00:00 UTC
From: "David S." <pampered@concentric.net>
Message-ID: <34334444.236E@concentric.net>
Source record: 184426

1. Just started reading daily and like the group. A lot of
intelligent helpful people.
2. The only complaint is that John Mackey, Jay thingy. I delete
all those messages so I have no idea what it is all about
but doesn't this group patrol that stuff. I read another
newsgroup daily and they clean that stuff up fast! Usually
through a warning and then banning. No big deal, just
commenting. It would just save me hitting the delete key
a lot of times.

So here is my problem, I am a novice scanner who might have a problem
you could help me with. I will give as many details as I can. I have a
Bearcat 200XLT with the antenna it came with (coiled wire coated with
hard rubber, approx. 8" long and fairly stiff w/ BNC connection). I
bought it about five years ago. When I bought my scanner (5 years ago)
my hometown police communicated on frequencies in the 155 range. I got
excellent reception of the city police even though I live in a township
outside the city. And naturally I got excellent reception of the township
police. I moved and packed my scanner away where it sat until this year
when I moved back to my hometown only 1/4 of mile where I used to live.
When I moved back I decided to start scanning the local police again.
I discovered that they had switched to a trunked system in the 800 range.
So I found all the appropiate frequencies via internet.

Problem: Now my reception sucks! I very rarely get a clear signal. Is this
natural with the 800 range? Because I'm maybe 7-15 miles from most city police
cars is it normal that I would get worse reception because they moved communication
from 155 range to the 800 range? My antenna was bent a little when I unpacked it
so is it possible this is causing the poor reception? Finally, I am buying a new
antenna irregradless and I would like some recommendations if you could.

What I want: -I don't want an outdoor antenna (not right now anyways)
-$30 - 50 dollar max.
-BNC connector
-Gives the strongest and best reception, if possible (of course)
-Listen to police (800 & 155 range) but if I expand my listening
a good all around antenna would be nice.
-Details on where to find and price.

I know this a lot but any help would be greatly appreciated. Thanks in
advance. I would prefer responses to my email. If you want to post to the
group fine but make sure you send one to my email also. I don't get to
read this often and sometimes I miss posts. Thanx again.

David

From: ted@homemail.com
Message-ID: <3433d839.1264709125@192.0.2.3>
Source record: 184428

Is the problem that you are trying to solve is the 'jittery'
squelch ? I am also looking for solutions and apparently there
are at least three solutions mentioned on the Internet:

#1. Controlling the bandwidth of some IF filter using a switch
(manual) that biases some diodes.

#2. Replacing an IF filter to increase the bandwidth from 6 to
7.5 or 10 Khz.

#3. Adding a capacitor.

I don't have much details about #1 and 2#. As for #3, it is
described at http://www.teleport.com/~gregsa/ham/ar8k/sput/.

Any info on the subject will be greatly appreciated.

Thanks,

TED

I wouldn't suggest doing this. If you succeed and screw with police communications, not only would you be jeopardizing the lives of the public and our police, but you'd find your a** in the slammer faster than you can say "illegal transmission". The FCC just loves to get people like you and they have the means to find you as soon as you key up your illegal transmitter.

Good luck in your endeavors......

I used the RS cheapo scanner antenna, goes for about $18US or so, for many a year and was totally happy with it. But then again, I wasen't into hearing martian farts and the like either.

I'm currently using the "old model" discone (with out the vertical whip) - it does seem to be more sensitive, but I don't really notice much difference.

I think that says more about what I'm listening to than the performance of either of these antennas. ie. I'm not into pulling in the cordless phone from the other side of the county.

I've also used an old CB 5/8's fiberglass whip with adequate results. I'd suggest start with whatever you'd like, that's cheap, if it dosen't do what you want - then move up. Basicly, if it ain't broke - don't fix it.

Enjoy!

Well, it looks like someone has struck a nerve here. It makes sense some how that you would respond to this man's explanation of your error in typical redneck rhetoric. However, I will translate, for the stupid people:

Barry O'Grady wrote:
Sorry to be vague.(That means he didn't mean to confuse your dumb ass) You can't use a qualifier (A word that makes another word more emphasised, dipshit.) with unique (the word you fucked up) since by itself (The word unique, John) it means one of. Thus (which means because of this fact) you can't have very unique or rather unique (But you can have very stupid, or rather assanine), etc. (That means "and so on, and so on and so on.)

Glad I could be of help with your technicalities there John.(you fool!)

460.8875 461.0875 465.8875 466.0875

If this list yields no results, try the nationwide itinerant frequencies.
You should be able to find them in books like Police Call and so on. I keep
them in a bank of my scanner because just about all department stores,
malls and apartment complexes use them since there is no license required.

* frequencies courtesy of R. Barron.

Sounds like nonsense that listening to encrypted radio trafic is illegal. Thats why its encrypted, because we may listen, but shouldn`t understand what we hear.Anyone interested in listening to encrypted traffic should contact me via e-mail. We can maybe exchange what we have learned. Douglas

Typical Tandy. They are so shitscared of offending the FCC that they won't even sell unblocked or moddable scanners in Canada. Which, by the way, has no such stupid legislation prohibiting their sale.

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/ (WWW).

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com (email), or http://www.perconcorp.com (WWW). The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads,
| "Portland, City of" in the master. Police Call has been merged with its
| sister publication, Beyond Police Call, and now includes a limited

| selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

Might it be effective to vote with our wallets, and refuse to buy a product unless the manufacturer will provide documentation on how to maintain the thing they want us to buy?

In the alternative, a lifetime warranty would suffice. If we can't be trusted with service information, then the manufacturer can assume that responsibility in perpetuity.

Uplink@Wavenet.Com wrote:

>IF ANYBODY HAS ONE I NEED ONE E-MAIL ME WITH INFO....

You are referring to the TV-R7000.

The newer TV-R7100 will work also, and might be easier to find.

The TV-R7000 would bolt physically to the right side of the receiver.
The TV-R7100 is a separate standalone box that site next to the
receiver but is not physically attached to it.

TV-R7000 was designed for the R7000 receiver, and superseded by the
TV-R7100 when the R7100 receiver happened. They are interchangeable
electrically.

Electrically they are similar except the TV-R7100 has an AGC line
which the TV-R7000 does not. A separate cable that plugs in the back
of the receiver along with the one that grabs the I.F. and strips the
video off. I doubt the AGC means much unless you are in a strong
signal area, meaning you have your own transmitter.

So you can use the TV-R7100 on an R7000 receiver; just don't connect
the AGC cable hanging out of the back of the TV-R7100.

TV-R7100 also decodes stereo FM broadcast. Don't remember if TV-R7000
does or not.

TV-R7100 is available new for $275. Mail me off list if interested.

And now another view....

I would suggest that you (and all users of mail-order) ask
the vendor what their return policy is before placing an order.

Knowing up-front what the policy is could sway me to go to another
vendor who has a return policy that would accomodate me. I have
ordered from AES in the past knowing full well that there is no
returns or a restocking fee if I change my mind on the purchase.

Let the buyer beware. Know up-front what the policy is.

Radio Shack has a new WWV clock. It is made by Oregon Scientific.
If you have priced this unit at other places, it can run as high
as $99. RatShack has it on sale for $39. If you like a very
accurate clock, now is the time to get one.

I believe that this clock is set by WWVB (60 Khz) six times a
day. I also have a German version by Oregon Sci that I paid
49 DM ($29). The Germans have wall clock, watches, everything
that are set by the national standards people. And most of it
is made here in the states!!!!

The Kenwood FRS radio IS AVAILABLE & has been for the last month or so.
It comes in one model & 2 colors - yellow or black - and has a 500 mW
transmitter. It features the standard 14 FRS channels & 38 CTCSS "pri-
vacy" tones PLUS speech inversion (aka scrambling)....the retail price
is $ 159.00 each.....I sell them for $ 139.95 each 1-6 & 129.95 6 up.
Contact me at (360) 254-9505 for more info.....

I read with great interest in one of the NG's that you can make 911 or emergency calls with an old (working) cellphone that is not activated or has a service contract.
Do any of you know if that's true ? The posting alluded to the fact that the FCC now mandates that cell service providers allow any phone access to their system for emergency calls.....I would be interested to know, as I have an old "bag" phone that is hanging out in my basement that I could throw under the seat ! (Don't want to "test" it by dialing 911, I'm sure you can understand why)

60. odd problem.

Newsgroup: rec.radio.scanner

I have an Ar1500 scanner, which is doing something strange. It receives a strong carrier signal on 155.775 mhz. This signal over-rides any real traffic on the channel. My other scanners don't get this signal. I'm wondering if the signal might be an image, and if it is, where is the true signal?

I checked around the house for something that might be producing the signal, and couldn't find anything. I walked a good distance from the house, and the signal didn't change much.

Any help appreciated.

markrobt+usenet@tezcat.com (Mark Roberts) wrote:

WWV and WWVH broadcast a 100 Hz time code. This is an
IRIG-H code with a 1 minute repeat cycle. Information is
encoded in BCD (Binary Coded Decimal); information similar
to that carried by WWVB. Get an old SW radio with a 10 inch
speaker and you can hear the 100 Hz code quite easily. This
code has been transmitted since at least the early 1970's.

>It comes with a small external ferrite-bar antenna connected
>to the clock by a wire. That antenna definitely
>is needed.

The ferrite bar would make more sense at 60 kHz than on SW
frequencies. A SW receiver would typically use a whip
antenna.

Pierre Thomson <pthomson@bruderhof.com> wrote:

To lay this question to rest: the R.S. clock receives WWVB on 60 KHz.

If you have trouble receiving the signal, take heart: NIST is in
the process of increasing their transmitter power and modifying
the antenna system to better cover the 48 states. There should
be a substantial increase in coverage of the East and West coasts
sometime in December. You might want to buy a clock at the sale
price, because the sale will probably end then! See:

http://www.bldrdoc.gov/timefreq/wwvstatus.htm

Good luck,

Pierre Thomson KA2QPG

66. AR8000 Squelch question

Newsgroup: rec.radio.scanner
Date: 1997-10-01 00:00:00 UTC
From: ted@homemail.com
Message-ID: <3432989e.1248426492@192.0.2.3>
Source record: 184482

Just got my new AR8000. It is really cool.

When performing search/scan, it sometimes stops on a frequency where the signal barely breaks the squelch. This makes the audio sound broken as the squelch turns on and off. The only 'solution' I found are (1) to push the 'Monitor' button or (2) to turn the squelch CCW, and both are kind of annoying. (previously I used BC235XLT and it seems to have hysteresis that takes care of that).

Am I missing something ? (I tried to play with the Expert Mode settings such as Level but could not find a reasonable solution). Is there is some programming/mod that 'fixes' this problem.

Any help will be greatly appreciated.

Thanks,

TED

As far as I know there are no real laws banning the use of scanners
either in your home, car, or on your person. The only laws that affect it are
the normal ones. ie, the use of a scanner in the commision of a crime.

Chris,
Remove your antenna and see if the signal goes away. If you still get
the signal with no antenna it is an internal generated signal.

Glenn

Do a WWW search for R7000 and Carl Clawson. Carl wrote a good paper on
the Icom control that assisted me in writting my control program for the
7000.
>
> I'd particularly like to be able to control/interrogate the "dot" that
> includes a channel in the SEL-M scan sequence - don't know if this is
> possible ?

Nope, not possible on the 7000. What I did find was with the right
program you don't need to use any of that front panel stuff on the 7000.
The right program turns it into a black box that is only useful for
adjusting the volume and squelch. If you need more info let me know and
I can dig into the archives.

It says on page 2 in the "Policies" section of their catalog "No returns on antennas..."

I can't see getting your money back from them even going through your credit card company due to the above statement printed in their catalog. The argument about putting a brick in the box IS going a bit overboard on their part. Best thing to do here is try to sell it at a small loss in the newsgroups. Personally I've always found them more than helpful with orders and very fast with shipments.

You must be kidding? I bought a defective "used" radio from them.

After talking to several people at AES (more details available), I
learned that I must eat the shipping both ways - even though it was
defective.

On a contrastive note, PC Zone sent a defective Zip drive to me. Not
only did they airborne one next day, they also had airborne pick up the
defective one. My cost $0.

Compare that to the twenty dollars for nothing from AES. No comparison.

84. TrunkTracker Scanner Case and Keypad Tricks

Newsgroup: rec.radio.scanner
Date: 1997-10-01 00:00:00 UTC
From: David Hitchner <asds@xworldnet.att.net>
Message-ID: <01bcceba$a4c5da00$6191410c@hal>
Source record: 184500

Does anyone know where I can get a good leather case for my TrunkTracker? I really like the ones sold by Radio Shack (I have one for my PRO-26: soft leather, custom fit), but I'd almost settle for any good case. I called several places but they either don't have any cases or have only generic cases that you must remove to use the scanner. I feel paranoid about carrying my scanner without a case having dropped my AR8000 and PRO-26 at least once.

Also, I know this has probably been asked a couple hundred time, but are there any keypad tricks for the TrunkTracker? I have search all the site on the web that I know about or could find through searching.

I don't understand the big deal here. This obviously depends on what day of the
week it is and what the price of tea is in China.

I went down to my local Rat Shack after reading this originally the other day.
I asked the salesdroid to order me the schematic for my 2026. He didn't bat an
eye and placed the order - took my money and said it would be delivered to my
door within 10 days.

What gives ?

I'll let you know if it doesn't show up or if they send a refund.

While I do have respect for the Tandy organization, and their fine line of products, I recognise that they have ALWAYS rolled over to expose their soft underside, anytime the Government asks them to do so.

So what else is new?

Well, I still get some of it, but the attenuator switch kills it. When
I hook up an external antenna, it mostly dies too, so I still am
wondering if it might be internally generated.

I agree, , , ,
BE CAREFUL, however, about their discone antennas.
DO NOT get the one with the hollow radials. They tend to come apart
and start decorating your lawn. The solid ones are OK.

Not any more... The FCC withdrew approval due to the ease with with the
bandplan could reinclude the cell frequencies.

The newly reapproved AR8000B cannot be so modified, apparently. Or at least it
will take a lot more work and money...

I've had pretty good results from RatShack's all band ground plane on
VHF lo, VHF hi and UHF. This antenna might be a good choice if you
don't need good performance on 800 MHz.

101. MDT Monitoring

Newsgroup: rec.radio.scanner
Date: 1997-10-01 00:00:00 UTC
From: Phil <psmalley@iac.honeywell.com>
Message-ID: <01bcce03$fe7167c0$667391a4@PSmalley95.iac.honeywell.com>
Source record: 184555

I am currently working on a data scanning program that will decode MDT, packet, pager transmissions and just about any other kind of data transmissions. I have seen a lot of concern in the NG's about this type of monitoring and the legal issues involved, so I will share what I have gathered.

1. Is it illegal? No. As far as I know the only time that monitoring these transmissions is illegal is if they have been encrypted by the sender. Furthermore, unless you attempt to un-encrypt the message, you are not commiting a crime.

2. Does ASCII code serve as an encryption technique? No. No more so than would any other common language, like English. If it was, you'd be commiting a crime by reading this posting.

Bear in mind, you should treat any type of received transmission - data or voice - as privileged information that you keep to yourself. That means no postings bragging about seeing everyone's NCIC info that was ran last night or finding out where that S.O.B. who cut you off lives. As long as the authorities view programs like these as mere hobbies, and not a serious threat, we can look forward to many more years of listening in. However, it only takes a few "bad eggs" who make ass-pains of themselves to ruin it for all of us, as is the case with cellular enabled scanners, among other things.

I should have a working copy of the program completed by early December, as it is still in development. I'll provide the beta version for testing at that time. If you are interested in recieving a beta version when it is ready, email me: psmalley@honeywell.com or agjxii@aol.com and put DataScanner 1.0 Beta in the subject line. You will need to be running Windows95 or NT 4.0 and you will need to buy or build the HamComm Interface, if you haven't already.

Thanks,
-Phil

>

YES...I do it all the time...that is, 24 hours a day.

in my car I have one antennae and four scanners.
Plus another 800 meghz antennae for inside mounting.
You can even get an antennae that mounts on the glass
from Radio Shack and a few other stores....

IT hooks into the radio, phono plug and you affix it to
windshield...great for local freq's within 20 miles...

No one knows you have a scanner.

As for inside house: same...you can get them from
Grove Enterprises...or go to RS and buy the adaptors
and cable and f-connectors and phono connectors and
do it that way. I have two scanners working off each
antennae...works great.

you can even use those CB/radio duo things.. for local
area listening. It's a bit hard to pull in distant
freq's with it.

you'll lose some sensitivity, but if you have a great
antennae system, the loss is minimal.

bill conduit
etc.

Download the following: (click on the link or goto the URL to download)

FCC Frequency Retreval System- 299k (must be used to view the
database file)
http://www.wvsc.wvnet.edu/~fcc/FCC_FRS.zip

California Database File (part 1)- 2.4mb (view w/above- from Spring 1996
FCC
Database- 2 sites to dload from)
ftp://hal.awwwsome.com/incoming/rimfire/CA1_Data.zip
http://www.wvsc.wvnet.edu/~fcc/CA1_Data.zip

California Database File (part 2)- 3.8mb (view w/above- from Spring 1996
FCC
Database- 2 sites to dload from)
http://www.wvsc.wvnet.edu/~fcc/CA2_Data.zip
ftp://hal.awwwsome.com/incoming/rimfire/CA2_Data.zip

Decompress FCC_FRS.ZIP first, then the database. Use FCC_FRS
(DOS-program) to view the database. The help file of the FCC_FRS
program is: (MS WORD format) 206k

http://www.wvsc.wvnet.edu/~fcc/FCCFRS.doc

If you don't have Microsoft Word, you can use the Microsoft WordView
7.1, which is freeware, from Microsoft's site:

http://www.microsoft.com/word/internet/viewer/viewer97/default.htm

Check out the main page (for other scanner stuff, and other state
databases- all 50 states)
http://www.wvsc.wvnet.edu/~fcc/

Happy scanning
Matt

112. New Weather Band Radio???

Why would you want to listen to someone else's PRIVATE
telephone conversation anyway?

It seems to me that it would be much cheaper to
just buy a small amplifier, earphone and alligator
clips and just clip directly to the connection.
But oops, I forgot, that's illegal! But is it
any less ethical than listening off the air?
Will laws against listening off the air or
manufacturing scanners that will receive these
frequencies help? Probably not. As stated by
someone else on this list a person could build
a converter to change the frequencies to "legal
ones."

"Laws are but a guide for a civilized society
but they will not prevent certain people from
acting in an uncivilized manor."

I am looking for scanner frequencies for this weekend's races in Charlotte!
Any info would be greatly appreciated. E-mail me.

>:Do any of you know if that's true ? The posting alluded to the fact that
>:the FCC now mandates that cell service providers allow any phone access to
>:their system for emergency calls.....I would be interested to know, as I
>:have an old "bag" phone that is hanging out in my basement that I could
>:throw under the seat ! (Don't want to "test" it by dialing 911, I'm sure
>:you can understand why)

At this point,

"...all cellular licensees, broadband PCS licensees, and certain
Specialized Mobile Radio (SMR) licensees..."

are *required* by the FCC to provide this service, assuming that:

1) the local 911 center is equipped to handle the information they
will get (and have asked the cell phone company to send them the
info).

2) they (the cell phone company) are recovering costs for the service.

This probably means getting part of the 911 subsidy that phone users
pay in most areas.

I'm not 100% sure its free in all places, yet. This will probably
change.

For the full text of the FCC statement, see

http://www.fcc.gov/Bureaus/Wireless/Orders/1996/fcc96264.txt

For those requesting cites (proof) of these statements, see especially
Paragraphs 10 and 11(Section II B...), which spell out the rules under
which this will be enforced.

This, IMHO, is a GOOD THING (TM).

Well, first of all those examples you specified (tapping into a cable, and inductively tapping a cable require an individual to tresspass or physically
modify/damage property that is NOT theirs.

Sitting in the privacy of you home, radio signals are passing all around you no tresspass/intrusive or physically harmful/damaging action of any kind need be taken to recieve these radio signals. That's the difference.

In addition, what these ban the scanner folks are suggesting show a lack of understanding of nature of radio.

They are asking for privacy, when there should be no reasonable expectation of privacy AND are asking NO demanding that everyone close their ears. It's been charactorized as walking in to a crowed room engaging in a normal voice conversation with another, then announcing that it is illegal to listen to the two of us converse, and you want everybody in the room to plug their ears. The point being that the burden of insuring privacy fall upon the person desiring it, not upon anybody within earshot that can hear a conversation in normal voice.

Look at all the problem Ham's have from TVI complaints, yet the burden of TVI is legally upon the manufacturer who have been allowed to eliminate componets cutting TVI, because it makes them more money.

Having said that, you may think I spend my days listing to cell/cordless phone calls, I don't. I have three scanners that can be easliy modified to do so, yet I have not performed the mods'. I'm not interested. You are right when you say that violates their privacy. I am interested in what my police, fire and public safety agencies do, and how they do it. I once was able to provide information to help the local police catch an armed robber, because I had a scanner in my car and as I drove by I saw all the police and wondered what was going on. (NO, I did not drive to the scene after hearing a dispatch, I was driving home from work).

You can purchase a 3-way splitter at Radio Shack that will work between 5-900 Mhz. This would be the same type of splitter you would use to split a TV antenna signal off to several TVs at the same time.

How in the Hell did this thread get back to cell mods. Just because your
idea of electronic repair is to whack the thing until it works or falls
apart doesn't mean others don't have the ability to desolder and replace
failed components. However, to do this correctly generally requires
schematics. Remember, the initial post was about a Pro-2006, a scanner
whose cell mod could easily be performed by a chimpanzee.
```

> Psalm 29:2
The laws I'm worried about are the ones that will say that we can't even

listen to PUBLIC service frequencies. I agree that we should have access to what others believe are private conversations. However there are enough radios out there that get the cellular and cordless bands that in order for people to have complete privacy the phone companys will need to introduce some form of encryption because I highly doubt that some of the people with the radios that are cellular are going to turn them in to have them fixed and the burden should be placed on the phone companys. Now I'll play devils advocate and say that you might compare cellular phones to postcards. You wouldn't write intimate letters on a postcard. I know it's against the law to read someones mail but are you 100% sure that someone isn't reading your postcards?
If you want to have a private conversation then use a landline. As you will never have privacy on a cellular unless they start encrypting the signal.I just hope that our hobby and freedoms will survive.

125. Need help choosing scanner!

Newsgroup: rec.radio.scanner
Date: 1997-10-02 00:00:00 UTC
From: whtreslr@ix.netcom.com
Message-ID: <3433ef7b.514797151@nntp.ix.netcom.com>
Source record: 184279

I had a scanner years ago and want to buy a new handheld. What would be the best scanner available for around $200-250?

I am primarily interested in one that will receive the cellular phone frequencies, I heard about the new law, so do they now make scanners so they can't get those frequencies?

Is it possible to program the scanner to search between two desired frequencies that you program in, such as 880mhz and 893 mhz?

Thanks for any help any of you can give me.

Scott

>without actually touching any wires, listen into your private telephone
>conversation? Same law applies. Well then why shouldn't there be laws
>against you listening to my cordless phone or cellular phone. The
>ONLY difference is that one uses a wire and one does not.

Let's go further. Why shouldn't there be laws against me listening to your conversation with your wife sitting next to me in the movie theater? The only difference that one uses technical means and one does not. I presume I should be put in jail for that, huh?

>This sounds like typical liberal/libertarian trash. Ideas that
>say that I should be able to do whatever I want when I want so
>long as I'm not hurting anyone else. Well listening in on someone's
>private conversations is "hurting" them. It violates their RIGHTS
>to privacy.

The key word here is *private*. But what makes information private? Surprisingly, it's not the contents of information itself, but the way YOU treat it. For example, one may treat his home phone number as private information, another may not. But this is not enough. If you write your phone number on the public toilet wall it is not private anymore, no matter how you feel about it.

If I stumbled across a piece of information, how do I know whether it's private or not? The answer is that YOU have to tell me so. How? By restricting my access to information or its contents (after all, this information is your property and you have all rights to do so). Now, what do I mean by 'restricting access'? After all, there is no unbreakable locks.

Well, any 'reasonable' measures should suffice. In other words, it should be obvious to the receiver (intended or unintended) that there has been an attempt by the sender to restrict access to the information. If you seal your letter in the envelope - it's good enough. Although it's easy to tear it open, it would be violation of your privacy. But if you shout out your credit card number in a shopping mall, it probably wouldn't.

The bottom line is that any information not explicitly designated as private should be considered public and any attempt to restrict my access to such information is violation of my freedoms. This is what distinguishes liberal

states from the police ones. Liberty is not a four-letter word, after all.

How does this relate to scanning versus phone tapping? Wired phone communications are commonly perceived as 'private' and rightly so. After all, information originates on your property, then travels through the property of your agent (telephone company) to the destination. That's why tapping phone line is violation of your privacy (and illegal) no matter where you tap. It's not so with wireless communications.

By using radio devices (e.g. cordless or cellular phones) you're *broadcasting* information, by definition. If that information by any chance crosses the boundaries of your property (or that of your agent), it becomes available to the public. You can't physically restrict access to that information (i.e. radio waves), although you can make it illegal (which is violation of my freedoms).

What you *can* do is to restrict my access to the *contents* of the information (e.g. by using encryption). In this case any attempt to decrypt your information would be equivalent to tearing up an envelope of the letter and therefore violation of your privacy.

So, listening to your broadcasts is not violation of your privacy. To the contrary, outlawing it is violation of my freedoms. Stop thinking of conventional cordless or wireless phone as of private communication channel, which it's not. To make it legally private you MUST use encryption.

Banning cellular phone frequencies from scanners it utterly wrong. It was merely a plot devised by big business who found it cheaper to lobby lawmakers to pass anti-constitutional law than to redesign their systems to ensure privacy of their customers. Bucks over freedoms!

Just a thought...

> physically
> modify/damage property that is NOT theirs.

True but irrelivent to the moral/ethical issue. Just because something
isn't against the law doesn't make it ethical or moral.

> Sitting in the privacy of you home, radio signals are passing all around you
> no tresspass/intrusive or physically harmful/damaging action of any kind
> need be taken to recieve these radio signals. That's the difference.

Just as the person on the phone is sitting in the privacy of his
own home....

> In addition, what these ban the scanner folks are suggesting show a lack
> of understanding of nature of radio.

Possibly but I think they understand the nature of those listening
on scanners pretty well. :/

> They are asking for privacy, when there should be no reasonable
> expectation of privacy AND are asking NO demanding that everyone close
> their ears.

That's why there are existing wire-tapping laws. Let's say
for the sake of argument that at present there were no wire-tapping
laws. Congress is concerned that a person can listen to his
neighbor's personal telephone conversation. Would you dispute
a law prohibiting wire-tapping? If no the why are you disputing
a law that makes it difficult to get radio receivers that will
receive cordless phone conversations? Tell me the ETHICAL difference
not the physics of the situation.

> It's been charactorized as walking in to a crowed room
> engaging in a normal voice conversation with another, then announcing that
> it is illegal to listen to the two of us converse, and you want everybody
> in the room to plug their ears.

The big difference is that one doesn't need special electronic equipment
to hear the couple next to him engaged in a conversation. Again what
is the ethical difference?

> The point being that the burden of
> insuring privacy fall upon the person desiring it, not upon anybody within
> earshot that can hear a conversation in normal voice.

Well you do have a point with this one. Consider this:
A couple is having a "private" conversation and notices that someone is
listening. So the go into another room. The person listening simply
places a microphone on the door and listens. So they go into separate
rooms and talk on the phone. This person taps the wires. So they
resort to a digitally encoded data stream. This person builds a
decoder.... Where will it end? What steps must one take to insure his
privacy? The line must be drawn somewhere in the law but where is
the line? Congress wants to make it illegal to sell scanners and
converters to receive these signals. It also wants to make it illegal
to sell digital decoders to decode digital cordless phones and the
new PCS phones. What's wrong with Congress and/or the FCC taking steps
to help insure privacy? They did it with the wire-tapping laws.

> Look at all the problem Ham's have from TVI complaints, yet the burden of
> TVI is legally upon the manufacturer who have been allowed to eliminate
> componets cutting TVI, because it makes them more money.

Hams rarly have problems with TVI complaints. CBers have many times
the complaints of hams. Besides I can use the argument that if my
equipment is operating within the technical standards of the FCC then
why should I stop talking on my radio just because you want to watch
television? The problem is not with my transmitter but with your
television not being able to handle/reject my transmitted signal.
That's what FCC Part 15 is all about. What does all of this have
to do with monitoring personal conversions with your scanner?

> Having said that, you may think I spend my days listing to cell/cordless phone
> calls, I don't. I have three scanners that can be easliy modified to do
> so, yet I have not performed the mods'. I'm not interested. You are right
> when you say that violates their privacy. I am interested in what my

> police and wondered what was going on. (NO, I did not drive to the scene
> after hearing a dispatch, I was driving home from work).
>
>
> greg

So you think that everyone else should have the right to do it
but you would never do it? Would you feel confortable if your
neighbor or some guy driving down the street could listen
to you in a private conversation with your wife/girlfriend?

California Highway Patrol Dispatch in Monterey has reconfigured the system to full repeaters.

You can still hear Santa Cruz/Gilroy still on 42.540 and Monterey units on 42.460

No more having to listen to the mobile freqs.

Is this trend gonna keep spreading north???

San Jose is still on the old splits.

You will also split the signal for each radio you have hooked to the splitter, if you are using all 3 radios at the same time from the same antenna.

If you want a great program to operate your AOR8000 via your computer,
have a look at
http://www.scanning.net
and download ARC.ZIP
The AOR8000 is the best portable scanner you can get, however....
the rubber antenna delivered with the AOR8000 is shit.
Replace it with a Diamond RH707 antenna and a new world opens for you!
For telephone freq. just replace the antenna with a ordinary metal
telescope antenna and you will have good results.

Hey folks,

I've just connected my handheld Bearcat scanner to my PC. It's a lot of fun. Thought I might share it with you.

What you need:
o any scanner with earphone jack or auxiliary output
o PC with sound card and speakers
o audio cable with appropriate jacks

What you get:
o enhanced audio
o ability to record comms

How to:

1. Just connect earphone output (or auxiliary output on base scanners) to the 'line' input on your sound card using the audio cable. (The trick here is to find a cable with right jacks).

2. Adjust volume controls on your scanner (if you connected to the earphone jack) and on your sound software, and off you go...

Well... Adjusting volume may be a little tricky. First, you want to get as high level as possible from the scanner to keep signal/noise ratio low, but not overload input stages on the sound board. I would suggest to set software volume control for the line input at about 75% level and set volume control knob on the scanner in the middle position. Then tune into a strong signal and gradually turn scanner volume knob up until sound becomes distorted, then turn the knob back a bit, so that you don't overload stages even during peak bursts.

Recording communications.

This will depend on software you are using. I'm using Windows'95, so my description is good for that beast. For starters, no third-party software is need. Everything is included in Windows.

1. There is a 'Sound Recorder' utility found in Start|Programs|Accessories|Multimedia menu. Click on it.

2. When it starts, select Edit|Audio Properties from the menu. Your goal is to select appropriate audio quality for recording. In 'Preferred quality' drop-down list select 'Telephone Quality'. This should be enough for the kind of audio scanner produces, anything more than that would be a waste of disk space. Yuo'll end up with bit rate of 11 kB/s (i.e. 10 seconds of audio takes up 110 kilobytes on the disk).

If you are adventurous enough you may push 'Customize...' button and play with 'Format' and 'Attributes' fields. Depending on hardware and software you're using you can get bit rate down to 1 kB/s (i.e. your 10-seconds snapshot can take up as little as 10 kB of disk space).

3. Now, bring up the 'Volume Control' utility (e.g. by double-clicking on the little speaker icon on your task bar) and select Options|Properties from the menu.

4. In the 'Adjust volume for' group select 'Recording' and push 'Ok' button. Make sure that 'Select' check-box in 'Line-In' group is checked and the rest is unchecked. Set the 'Volume' sliders for both 'Recording' and 'Line-In' groups to about 75% of the maximum.

5. Go back to the Sound Recorder (do not close Volume Control window) and start recording by pushing a button with a red dot in it. Adjust 'Line-In' and 'Recording' levels using Volume Control window so that UV-meter in the 'Recording' section jumps up to the red section.

6. Hit the Sound Recorder's stop button (the one with black rectangle in it), then select File|Save As from the menu and save it to the file.

It's that simple! Now you can edit it, mix with other sounds, share it with your friends or post it to alt.binaries.sounds.* newsgroups. Just don't post it here, if you don't wanna be flamed!

Note, that since scanners produce audio with narrow bandwidth (about 4 kHz), any sound card will do, including very old 8-bit ones.

Scanning away...

I went to RS and looked at their WWV(b) ("Atomic") clock. The U.S.
version seems to only do 12 hour AM/PM time (with alternate time
zone), but NO 24 hour mode I could find in the manual, on the
instrument, on the price tag or in their catalog!

Bummer... I would have bought one if it did! Let's face it...the
WWV(b) signal comes to the clock in 24 hour format! It would have
been easy to leave that format available in the first place! Too bad
Joe Sixpack and lack of market understanding has once again influenced
a product he is most likely not interested in owning, and alienated
the very type of person who is most likely to buy one!

Smooth Move RS! Grrrrrr.......

Phil,
I asked Icom about this in their forum on compuserve. I told them
they were shooting themselves in the foot by not releasing the serial
specs. They still insist that it will be kept proprietary. However, this
is not something that can really kept a secret. I suspect that shortly
after these radios hit the market here in the US, someone will connect a
serial protocol analyzer between their computer and the PCR1000 and
simply capture all the commands as the software is put through its paces.
It won't be a secret for long.

I have a PRO 2026 scanner from Radio Shack that I'm interested in selling or trading. The scanner comes with the owners manual, the original box, and the mounting bracket. It can be used as a base/home or a mobile scanner. It has direct keyboard access to over 30,000 frequencies. It also comes with:

Delay Feature
Scan, Priority Feature, Lock Out, and Monitor
100 Memory Channels (5 Banks)
Volume And Squelch
1 Touch Weather, Police, Fire, Air, and Marine Bands
External Speaker Jack

The buyer must pay the shipping. The scanner is in very good cosmetic condition and excellent working condition. Please make an offer on it. All offers considered. Trades are also considered. Radio gear only though.

Becasue I have a LIFE other than radio & internet, something
you seem to know little about. I have been putting in INCREDIBLE
hours at work lately, taking up time. Priorities ya know.

> You tend to attract a lot of unwanted attention to yourself.

Are you recycling the lines that people have said to YOU? That's
the pot calling the kettle black.

Funny, I came on to the internet in November of 1996, that isn't even
2 years. Either you exagorate or lie.

> You have made a point of making sure everyone knows who John Mackey

Aw shucks, I know I am one of the BEST known ham radio personalities
on the internet but I don't like to flaunt it.

> Go change your diaper, John.

Do you wanna EAT IT?

Don't waste a lot of money on coax. Any good quality 1/4 or 1/2 will
work. I am using double shelided 1/2 9133 only because my Ringo ranger
II has a high swr and in is now my scanner antenna and it works great.
Real good for picking up cordless phones also.

FYI....

Family Radio (aka FRS) are 14 467.XXXX mhz 12.5 khz FM UHF channels
sandwiched in between the GMRS 25 khz radio channels (UHF CB) that have
been set aside by the FCC for low power (no more than 500 mW)
UN-LICENSED operation by anyone in the US....

Have I ever "Claimed" to be on USA.NET???? No, I never have.

I don't know why I explain anything to you as you are to
bull-headed to listen or understand, but here goes.....

Go look at the web page for USA.NET, you will find that it is a
MAIL SERVICE and nothing else!!! You are correct, I currently
use Sprint for my ISP. (I do intend on changing soon) By using a
seperate mail service, I can maintain the same e-mail address
regardless of the ISP.

I am not covering my tracks, rather, I am making it EASIER for
people to find me since regardless of the ISP I always have
the same e-mail address.

You are simply trying to make trouble (AGAIN).

: programmed (by a Motorola dealer) to talk to the "talkabout; BUT, it
: may no longer be type-accepted if this is done, and, therefore, no
: longer "legal" to operate......

Well, sorta. The basic requirements for an FRS radio are:
0.5 watt ERP
Non-removeable antenna
+/- 2.5 kHz deviation
3 kHz max audio high end response

Note that the deviation is half the normal GMRS and itinerant
(red dot etc) radio deviation. This is because the FRS frequencies
are sandwitched between the GMRS frequencies and the low deviation
is required to prevent adjacent channel interference.

Drivel: I haven't heard the terms "wide-band" and "narrow-band"
since we did the conversion from +/-15KHz deviation to +/-5KHz
deviation in about 1971. Those "wide-band" radios were really
cool with the dynamotors, vibrator power supplies, selenium
recifiers, loctal tubes, 5 lb microphones and garden hose size
cableing. Ah, nostalgia.

he >ONLY difference is that one
GK>uses a wire and one does not.

GK>Let's go further. Why shouldn't there be laws against me listening to
GK>your conversation with your wife sitting next to me in the movie
GK>theater? The only difference that one uses technical means and one
GK>does not. I presume I should be put in jail for that, huh?

Actually Gene, the difference is what is called "expectation of privacy". The USSC has used this term to differentiate between when a person can reasonably expect a conversation to be private, and when they can't. For example, if a police officer is walking by an open window and hears two people plotting or talking about commiting a crime, he can take action. If, however, he uses electronic means to hear what is going on inside a closed room, absent a court order of course, he is violating the law. Sometimes the line is very thin, but it still exists.

Personally, I agree that the onus should be on the cellular or PCS providers, but unfortunately, the law doesn't agree with me.

>
> Don't waste a lot of money on coax.

Poor advise. Unless you are speaking of fairly short runs, 25 feet and under, you should spend the money on some quality low loss cable. The wrong cable can cause you to lose a large percentage of the signal before it gets to the scanner.

>Any good quality 1/4 or 1/2 will work.

Work yes, well no. Good quality isn't the same as quality low loss. The highest quality RG58 coax is still terrible for anything but patch cables or really short runs.

> I am using double shelided 1/2 9133 only because my Ringo ranger
> II has a high swr

What does high SWR have to do with what type of cable you use?

> and in is now my scanner antenna and it works great.

Great compared to what? I have several antennas made for various vhf/uhf ham bands. They all work so so for scanning but a terrible compared to the majority of scanner specialty antennas I have used. The Cushcraft antennas (Ringo and others) work fine if you are using it for a frequency close to the freq it is designed for but usually suck big time as you tune above or below the designed frequency.

> Real good for picking up cordless phones also.

Wonderful. With all the folks working to ban scanners it is nice to see intelligent comments like the above on a public forum like this. Have you written your representative about how good it works?

In regard to charging Ni-Cads,I do not let the battery go completely
dead.I charge mine as soon as the low battery indicator comes on.This
topic has been discussed on the Trunkcom list and this method seems to be
the consensus;discharging Ni-cads completely could actually shorten
battery life.

>to privacy.

This argument makes as much sense as what I about to say to you based on your
comments.

When you use your cordless or cellular telephone near my home, I will be forced
to call the local police and have you arrested for breaking and entering.

Sounds dumb, doesn't it. Unfortunately, it is the same argument you are using.
I cannot hurt you by listening to your cordless conversations. Just as you
cannot hurt me by sending your radio waves through my home.

And your silly argument about RIGHTS stands the same for me. I have the right
to privacy as well. I can't have it when your radio signals are being forced in
to my home. I know this sounds dumb, but it's what you're saying as well.

>I realize that we can't really legeslate morality. Tell me what
>is moral about listening into someone's private conversation, legal
>or not.

Tell me what is immoral about it? I think it makes for good entertainment
(sometimes) - plain and simple. I see nothing wrong with it.

Those who are educated or give a crap will either use a wired phone, or get a
cordless with spread spectrum technology. Right now, that's about the only way
to insure privacy from scanner listeners.

>
1. Turn the scanner off
2. Hold down buttons MAN+2+9 (hope you're a contortionist)
3. Turn it on. That should reset the CPU.

The above works on my 230xlt and just about every other Uniden scanner out there, but I have not tried it on the trunk tracker (and I really don't want to, either - reprogram 300 channels and all those talk groups? Yuk!). If it works, post a message and let us know.

Pam,
To answer your questions:(or at least try)
> I've heard the 2006 is a highly rated scanner but why are frequencies
> 520-760 blocked out? What's on those frequencies?

Those are TV freq's. The scanner would need wide-band fm coverage to
receive them. As far as I know none of their scanners receive wide band.

> If it has the frequencies 760-1300MHz, it should have the entire 800 Mhz
> spectrum, including cellular with no block outs, right?

IF it was manufactured before 1994, it should. If not, then they're gone.

Hope that helps!

>
>Nat Heatwole
>heatwole@clark.net

If your scanner can't be modified, since it is a dual conversion scanner, you CAN still receive most of the cell range on it. Enter 896.1125 as the lower limit and 920 as an upper limit. Then just hit search. I have found that you'll also want to turn on the delay. This trick also helps knock out adjacent interference too. For example, if your local police is on 482.8625 and there is a pager company coming thru, or just intermod (garbage) then try adding 21.4 to the frequency (504.4625) That should cut down, if not eliminate any noise. Fun, fun fun!

I read with great interest in one of the NG's that you can make 911 or emergency calls with an old (working) cellphone that is not activated or has a service contract.
<<<Do any of you know if that's true ? The posting alluded to the fact that the FCC now mandates that cell service providers allow any phone access to their system for emergency calls.....I would be interested to know, as I have an old "bag" phone that is hanging out in my basement that I could throw under the seat ! (Don't want to "test" it by dialing 911, I'm sure you can understand why)

>>>

yep, it's true, it works will all cell phones.

As I said in my original post, that I bought my unit in
Germany which is set up for the Frankfort time signal and
has a radius of 1500 km (it has "trouble" receiving here
in the states). Oregon Scientific makes two versions for
Europe, one for Britain and one for Germany. And there
are many other firms selling as well. I have even seen
watches that are regulated by the time signals.

Interesting that you mention this scanner. I thought I might have the only one. I called Uniden to get the manual and was told there was no such scanner and never was. They sent me the 350A manual. Someone suggested the 450A is the same as 350A but was probably renumbered for sale by a designated retailer like Kmart or Sears. Anyone know?
BTW good luck selling it; I like mine, especially for the Marine Freq presets..

Hi,

This is S. John Mackey in North Carolina. There is a nut case living
somewhere in So California who has vowed revenge on me for getting her
kicked off of GTE.NET for excessive trolling of several newsgroups.
It's a long story, but the bottom line is that she's plugged our name
(or is that names?) into DEJANEWS and decided we are the same person.
I suppose in some twisted corner of her small mind, she thinks she's
bothering me by slapping up web pages that have something of an
anthology of my USENET life... in any event the following message has
been posted to several newsgroups:

I went to my first NASCAR race recently and thought I could get away with Walkman style headphones but my buddy who goes to these on a regular basis said don't even try to use them. He was quite right. A small track or a smaller venue with quieter cars you might be able to get away with using them. If you're going to a high performance race you're going to need a headset. I purchased a set at the track that were actually very reasonably priced (much to my surprise). I bought RACETRAC headphones that are specifically made for scanner use. They are not stereo and were about $25. They are of excellent quality with seperate volume controls on each ear muff. My particular model is the RT-40. I strongly suggest you invest in something similar if you want to hear the drivers and crew chiefs.

Regards,
Dean Lambo

(it's "affecting" not "effecting").

and so?

why are people going to the trouble and work of writing these bills?
because they're bored? i don't think so.

currently those who have the ability to receive stuff have been grouped in
with various unsavory elements of society who have been shown to not be
trustworthy of the responsibility to not divulge the content of communications,
particulary with respect to politicians.

as far as the politicians are concerned, y'all justa bunch of nosy, peeping toms.
especially since several pols have been skewered by divulged communications
either during their term or while running for office.

it just helps that everyone read 1984 so they can use that imagery to get the
general public to side with the politican and back a "right to privacy"...that of
course isn't real due to pols also wanting to go along with the law enforcement
guys and give them a back door for wiretaps...

I downloaded the 2.02 ver three days ago and have had no problems. In fact, I like the software so much, I have sent the $15 reg. fee. It is fast and has never given me any false readings as far as extended DTMF goes. It's an excellent piece of software. I have been able to get up to 17 dig/sec out of it running on a P100 under '95.

: Those are TV freq's. The scanner would need wide-band fm coverage to
: receive them. As far as I know none of their scanners receive wide band.

Then you don't know squat about the PRO-2006!
It most CERTAINLY has wide-band fm...it picks up both VHF tv and FM
broadcast band signals perfectly(totally clear).
OTOH, many other Radio Shack scanners(most of them, in fact) do NOT
receive WFM signals.

: > If it has the frequencies 760-1300MHz, it should have the entire 800 Mhz
: > spectrum, including cellular with no block outs, right?

: IF it was manufactured before 1994, it should. If not, then they're gone.

AFAIK, no un-modable 2006's were made-Tandy discontinued it instead.
So all 2006's should be modable, but will need a diode lead clipped...of
course, the vast majority of the 2006's in the "field" will already have
had this done.

: Hope that helps!

Well......how's about if they passed a law that said you couldn't
buy oil for your car and put it in yourself unless you possessed
an oil-changer's license?

Or, you couldn't change your light bulbs unless you were
a licensed electrician?

Or change the tires on your bicycle?

Ad nauseum?

The precedent for licensed transmitter technicians was established
a zillion years ago. There is no precedent for licensing receiver
technicians. And by the <deities of choice>, there damned well
shouldn't be....... And legality has nothing to do with it. The
law should never extend into your home to declare what you can and
can't do with a passive device.

The fact that the law does intrude into your bedroom and even between
your sheets is no different than laws requiring homage to the King.....
or "heil Hitler"..... or ....

IMHO.

Partly true.The CRTC regulates broadcasting, sets bandwidth allocations and also oversees telecom industry . Industry Canada is the body that administrates and enforces ham radio, and all communications, inc pagers, repeaters, and all licensing for uhf, vhf etc. utility radio. Industry Canada performs the functions that used to be done by the Dept.of Transport, and before that by the Dept of Communications. Hope this is of some use.... I don't know their website, but it probably has something to do with IC, which they are commonly known as. Tim

-
-Or change the tires on your bicycle?
-
-Ad nauseum?

You mean like the law that says you can't buy freon?
What do laws designed to "protect the environment" (yeah right)
have to do with laws to protect a person's privacy?

-The precedent for licensed transmitter technicians was established
-a zillion years ago. There is no precedent for licensing receiver
-
-technicians. And by the <deities of choice>, there damned well
-shouldn't be..... And legality has nothing to do with it.

Why not? Tell me why you should be able to listen to my private
telephone conversations?

-The law should never extend into your home to declare what you can and
-can't do with a passive device.

So I can take my passive device (small amplifier with aligator clips)
and attach it to your telephone line at the pole (off of your property)
and listen to your private telephone conversations? No there are
laws against that. Well then why can't I take my inductive pickup and,
without actually touching any wires, listen into your private telephone
conversation? Same law applies. Well then why shouldn't there be laws

against you listening to my cordless phone or cellular phone. The
ONLY difference is that one uses a wire and one does not.

A knife is a "passive device" but there are laws limiting its use.
Hammers, saws, tree limbs, rocks are all passive devices but you
can't use them to bring harm to others.

-The fact that the law does intrude into your bedroom...

But when you listen to the private conversion between a man and
his wife you might as well be intruding into their bedroom.

-...and even between
-your sheets is no different than laws requiring homage to the King.....
-or "heil Hitler"..... or ....
-
-IMHO.

This sounds like typical liberal/libertarian trash. Ideas that
say that I should be able to do whatever I want when I want so
long as I'm not hurting anyone else. Well listening in on someone's
private conversations is "hurting" them. It violates their RIGHTS
to privacy.

"Laws are designed to be a guide to a civilized society but they
will not prevent certain people from acting in an uncivilized
manor." -- Clarance Thomas

I realize that we can't really legeslate morality. Tell me what
is moral about listening into someone's private conversation, legal
or not.

Kevin, WB5RUE
wb5rue@amsat.org
wb5rue@stic.net I'll answer to either

I'd love to see the schematics for all CBs & scanners placed on a cd,
with all the improvements from Secret CB, Cheeks scanner books, & any
other
reputable sources. Sort of a new improved SAMs... It would need to be in
Mac
& PC format, or maybe a .pdf file although I'm not impressed with the
pdf
format.

>members with some device.

I'd look into that as well as some other things. What time are your performances? I worked at a TV station that would get regular interference like clockwork. Turned out to be a taxi dispatching transmitter that had drifted and was mixing with our signal. They would use a different transmitter at night, or something like that. Could it be a nearby business that has activated an alarm? Is the interference there at the same time of the evening when there is NO audience present? If it's at night, could it be interference from a nearby street light or parking lot light that has come on?

214. What is this Scanner??

I got a "Courier COP-SCAN" uhf handheld crystal scanner.

it appears that the date of mfg. is 1/12/96??? but it's
crystal. (AL96) this thing says made in JAPAN.

can i put vhf crystals in it, and will it work?

this thing is in really good shape but it's gotta be old.

seen it?

215. Is Icom PCR-1000 a DOA Product?

Newsgroup: rec.radio.scanner
Date: 1997-10-02 00:00:00 UTC
From: Philip Scott <pwscott@erols.com>
Message-ID: <3433B438.6A38A2A2@erols.com>
Source record: 184400

I was close to buying an Icom PCR-1000- their new 'black box' scanning receiver.....[-see URL below:]

http://www.icomamerica.com/featured/

....when it occurred to me that I had better check with a few of the major scanning/radio software vendors to see that they would in fact support it at some time. I use ScanCat for Windows Gold and Scan*Star and have a lot of files for places I visit and for home to use in an OS456/2006 and an AR8000. Anyway, when I queried a few of these companies I heard the same from each....Icom has refused to even give us access to the interface specs! One said, "...Save your money!..."
I know this radio comes with some neat-looking software...may be even cool enough to buy one for scanning and searching when traveling with a laptop or for the shack, BUT I for one am very hesitant to be stuck without the kind of support other radios have for uploading or at least importing Percon or ScanCat and Scan*Star files that I have spent so much time keying in or accumulating.

Anybody buy one of these yet? I wonder if their software can import files...I kind of doubt it. When I bought a Kenwood TS-870 some time ago, they had neat software but it's never even been updated once since then that I know of. Fortunately, Kenwood stuck to their standard interface. Icom has forced the CI-V interface on us a long time now, but this one is RS-232 and they seem unwilling to help software vendors develop code for it! Same as the R-10 I think? May be these talented code writers will reverse engineer this one like the R-10 but why buy one of these units from Icom if they're going to be this way?

Finally, in fairness to Icom (who I think does make quality, albeit counter-intuitive and hard-to-operate receivers e.g. R-7100) I called their dealer, HRO, to get some feedback. HRO referred me to Icom with a warning that I should, "...be prepared to be on hold for a long, long time....". So I called Icom, told the switchboard I wanted some feature/function questions answered about a forthcoming product. They insisted on sending me to Technical Support....I held for 14 minutes before hanging up. Oh well.....

Anybody else have any thoughts on this radio? Anyone try one yet?

Phil

Even better is to take it to your local PD *after* the modification
and have them take a look at it to make sure it's been done correctly.
Key up a few times at the front desk just to prove it works well....

Good luck pursuing that line; I have been rebuffed by Alpine and Volvo, among others, in attempting to get service manuals for certain Honda car stereos made by Alpine, and any Volvo radio (they won't even say who makes the Volvo radios!). Car owners are instructed to return to their Honda or Volvo dealers for an exchange radio. Also, Delco now refuses to sell service manuals or parts for GM radios to anyone but Delco authorized warranty shops (this started about a year ago; prior to that, anyone could buy a manual or part). Many years ago, Volkswagen was sued for not making service manuals for their cars available to the trade, but I haven't heard anything recently about manufacturers witholding service data.

There you go! We can also sell cigarettes, Bibles, _Huckleberry Finn_
(and other "banned" books), and of course, scanners that can receive
cellphones out of the back of our cars. Heck, who needs to sell drugs and
illegal guns anyways when we can peddle this stuff?! B-)

Just a little offbeat humor but it seems like things are going that way.

Chuck, just some thoughts, ala P.J. O'Roarke style.... B-)

229. Scanning in Australia (Melbourne)

Newsgroup: rec.radio.scanner
Date: 1997-10-02 00:00:00 UTC
From: Paul Gunn <gunnp@spamno.fri.cri.nz>
Message-ID: <3432FB3C.71D4@spamno.fri.cri.nz>
Source record: 184453

I'm heading to Melbourne sometime soon, and I'm looking for some info on scanning there.

Firstly, my understanding is it's legality is similar to NZ, "don't chase ambulances and don't tell anyone what you hear and we'll ignore you". Sound about right? If it's more restrictive I'd *really* like to know.

Secondly, I'd like specifics for what to listen to in and around Melbourne, or general band plan information if you can't help with specifics.

I'm quite happy to try to fill in the same sort of gaps any Ozzie may have about their small neighbour.

I've heard Australia before without leaving home. During some parts of the year, a local channel in my town gets signal from some suburb in North Sydney. Quite odd.

Thanx, email replies possibly best (after removing antispam insert).

231. UBC 9000XLT trick

Newsgroup: rec.radio.scanner
Date: 1997-10-02 00:00:00 UTC
From: Clark Rennie <cerenniexxx@gte.net>
Message-ID: <60v0bq$59$1@gte2.gte.net>
Source record: 184455

In the June'94 issue of Monitoring Times, Bob Parnass gave a keypad trick in his review of the BC 9000XLT. Turn power on while pressing the DELAY,2,AND 9 keys simulateously, then release them. Press the LOCK and PROGRAM keys simulaneously, the release them.

You will hear a series of beeps and the message scrolling on the display "Uniden America ****1994**** Presents You a New Bearcat BC9000XLT, Specifically Designed for Professional Scaner Users" (Note the misspelling of word scanner.)

My question is, I have the UBC9000XLT model and instead of saying " Uniden America" , mine says "DECTEL".
Anyone know what "DECTEL" MEANS?

Clark

Nice idea

Too expensive.

Prone to noise problems from being in an "RF rich environment" (so I've heard)

I'd be interested if the price was right - going to have to come WAY down in price 'for I'm look'n close.

FWIW,

My BC200XLT went Tango Uniform on me after many years of good service. Since I was convinced the unit was toast, I went ahead and sent it to the Radio Shack Service center through our local RS. They have a new 'priority' repair deal setup if you have one of their credit cards.

Not only did the unit come back within 5 business days, it now works. All freqs are still in it (after sitting on my bench for a month w/no battery - impressive in itself) and NONE of the mods were messed with at all. My cost? the $49 labor fee. Turned out to be a simple cold joint gone bad I didn't find. Glad they did - wish I had.

RS manager assured me that if it's a RS product, yes - they'll undo any mods and make the unit 'legal'. If it's a NON-RS product - they don't care. Mods left alone.

But Bill,

I really don't want to buy another scanner - even a Pro 2042. Wouldn't just a massive letter writting type deal get their attention too?

Bill- wrote:

I was just wondering how much of a resale demand there is for the Regency HX2000 scanner with full 800-950 Mhz coverage, and seperate 800 Mhz antenna. (It even tells you how to pick up the cellular frequencies in the manual. How times change!) It also covers 118-174 Mhz and 406-512 Mhz with the regular antenna.

Yeah, I remember that Terry said that I could have a FREE ride in the AES Starship for each $250 that I had spent there if I had the receipts! Also, if I was visiting a town that had a AES, he would send out a limo to ferry me into the store. That was in the "old days", pre breakdown. Things got a little rough for the company back then (about '90, '91) because of these things that Terry was putting in the catalog. They owned or leased 2 of those Beech Starships which were incredibly expensive to fly and maintain. Then there were the limos along with some acquisitions that pushed the company almost over the edge. Not really sound business decisions for a amateur radio equipment dealer, don't you think?

Having "inside" experience at AES for a few years, I can tell you that some of the policies are rooted in the "kit" days. They also seem to change with the wind. I can't help but think Jack got hold of a new guy that didn't know much, or that he pissed someone off to the point of them strictly interpreting the policy. If the transaction happened EXACTLY as he said, AES should have accepted the return and credited him with the price less shipping. The only other charges should have been the 15% restock fee if warranted. They double box most everything, so it could go right back on the shelf or out the door. The deal about "slipping a brick in the box" is pure bulls@#!!!! If they got a brick back (or everything in the box wasn't there/broken/swapped/whatever), that then would be credit card fraud which is a felony, and AES DOES pursue fraud. They also network with the other dealers to notify them of a "baddie" until it is cleared up. If the guy was a real ham wanting to buy new equipment, he would be SOL with most everyone until the matter was settled. The point here is that it is hard to make blanket policies. Look at all of the mail order houses in business. My wife gets 7 catalogs or more a week from different business,

and they all offer money back guarantee or free exchange or if you don't like it, send it back, etc...etc. Why should hams be treated differently? Like it or not, Ham radio HAS become a consumer commodity. If there is to be a policy, make it returns accepted after inspection or unopened boxes accepted only or something like that, not NO RETURNS!! There are many different situations, I've heard most of them. If AES sent 3 huge monoband beams to Jack that he ordered, then while they were in transit, Jack was killed in an accdent, and his widow wanted to return them for credit since Jack was now dead, do you think they would stand up tall and say "sorry, NO RETURNS on antennas, PERIOD."?? I doubt it.

A short but true story... an Electrical Engineer and Extra class ham (he made sure that I knew it) wanted to put up a 160 meter dipole. He called me and said he wanted to buy the materials to construct this. No problem. He bought all the wire, insulators and feedpoint balun to make it himself. A week later he called bitching and moaning that I has sold him wrong. According to him, I had not told him a 160 meter dipole was 260 feet long (DUH---HE was the EE) and it would not fit in his yard on a 30 ft tower. Of course, he wanted to return it AFTER installation, we said NO, he threatened to sue and all sorts of other nasty things. He ended up sending it all back in a box than looked like it was growing. When we opened it up, all 300 feet of the Copperweld came blasting out of the box, if you've ever worked with that wire, you know what I mean. It was ruined, and was going to be scrapped. Meanwhile, Mr. EE has the credit card company debit the purchase from his account because WE failed to instruct HIM on the technical details of the antenna. All of this CRAP over $50 worth of parts. After we had a meeting with a rep from the credit card company, it was determined that Mr. EE would now be recharged for returning merchandise in "unsaleable condition", and told him there could be other legal problems if he pursued it any more. We repacked the wire and sent it back to him, and never heard another word.

AES is a great supplier for the hobby. They need to review their policies for the ever-changing customer base that they have.....if not, they might be the next addition to HRO's ever increasing "multi-store buying power".

Now.....about customer service in the store at the counter.....

Placing the antenna in the center of the roof *should* be the optimal position providing for best omni-directional (front/back - side to side) coverage.

>that responsibility in perpetuity.

It was mentioned in an earlier followup that some companies do not
provide service materials to "mere mortals". I have run up against
this for years, even as a technician for a government ran shop.
Try buying a service document for, lets say, a Dell monitor.
"Proprietory information" I am told. Try getting ifo on some of the
inner workings of some of Motorola's newer digital radios -- again
"Proprietory information". In other words -- we cant trust YOU to
work on our gear, so send it in to our depot and we will gladly
swap it for a new one for a nominal fee.....

Makers of two-way gear are getting away from keeping
parts stocks to support repair of older models as well.
Used to be a time when Motorola sold parts for any
radio made, now try finding a part for any unit over 5
years old. And with service literature, the newer
stuff is almost impossible to talk them out of detailed
service info.

So it ain't just Tandy, it's an industry trend.

Tom

> of coax for the run between scanner and antenna??

From the FAQ article "Introduction to Scanning,"

[...]

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of
feedline, use RG213/U or high quality RG8/U coaxial cable.
RG213/U, e.g., Belden type 8267, has a non-contaminating
jacket and will last longer. Each has an outer diameter of
about 13/32". Similarly sized Belden 9913 cable and clones
have lower attenuation but are difficult to bend, require
special connectors, and can accumulate moisture inside
because they are hollow.

If you must use a small diameter cable for long runs, use
RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high
frequencies. RG8/X (1/4" OD) is suitable for short patch
cords.

[...]

Personal opinion?

Get one of those Radio Shack Discones, stick it in the attic, corner of the room - out of the way (best outside, but....). Run your cable and voila! I also use a BC200XLT and a Pro-2026 - both on the same discone. Works great for me here from 145 to 800mhz +

When you hit the local RS store - try to get one of the older "discontinued" discones. Their newer one includes a veritcal whip and a cost about $30 over the older one.

BC200/205XLT CELLULAR RESTORATION

Note: It is unlawful to monitor cellular telephone conversations. It is possible to monitor signals from the deleted ranges even without conversion. Simply add 21.7 MHz to the deleted frequency and enter the higher (image) frequency. Reception is virtually identical in strength to that which would be heard on the deleted frequency.

The frequencies deleted at the factory may be restored, but the procedure must not be attempted by anyone unfamiliar with electronic circuitry.

TOOLS REQUIRED: Small Phillips screwdriver, small wire cutters.

1. Slide off the battery pack and remove the antenna from the scanner.

2. Using a small Phillips screwdriver, remove the two screws from the back of the scanner, the two screws which hold the battery retaining spring at the base and the spring itself.

3. Carefully pry the bottom of the rear cover from the radio and remove the cover.

4. Locate the two small screws at the base of the circuit board and remove them. Gently pull the front panel from the mainframe at the base and separate them.

5. Locate the (64 pin quad flatpack) microprocessor IC labelled "UNIDEN UC-1147" and the 10k ohm (brown-black-orange) leadless resistor positioned above the letters "DEN" on the IC.

6. Using miniature wire cutters, cut the resistor body in two without disturbing anything else near it. If the left solder pad comes loose, it may be peeled from the board. Brush or blow away any residue. This completes the restoration.

REASSEMBLY

7. Insert the top of the front panel into the slot under the volume/squelch control panel and, noting carefully the alignment of the dual inline connector at the bottom of the board with the mating socket, press the front panel firmly into place. Be sure that the holes at the bottom of the circuit board line up with the holes in the plastic standoffs below them. Insert the two screws and gently tighten them.

8. Replace the back cover by inserting the top of the cover into the slot under the volume/squelch control panel; press the cover into place, insert and tighten the screws.

9. Reposition the battery retaining spring (slotted side toward notched
hole), insert the two remaining screws and gently but securely tighten them.

10. Slide the battery pack into place; switch the scanner on to make
sure the display comes on. If not, the battery is discharged or the dual-inline
connector was misaligned during assembly (see step 7).

Assuming the display comes on, press: MANUAL, 845.0, E; within two seconds, the
frequency 845.000 should appear on the display.

> Why not? Tell me why you should be able to listen to
> my private [radio]telephone conversations?

A very dear friend of mine is deaf.
But she is one of the world's best lip-readers.

The Republican Congress heard about this invasion of the privacy of conversations, and is considering making a law directing the FCC to enact rules which will make it illegal to receive certain frequencies of the electromagnetic spectrum (commonly refered to as light), so that citizens will not be able to lip-read anymore.

A photon sheild (commonly refered to as blinders) will be required covering corneal receivers on all citizens born after a certain date. It is still unclear whether citizens born before this date will be "grandfathered" in to use the spectrum on a shared basis, or must be retro-fitted with corneal blinders.

Portions of the light spectrum will then be made available via auction. Licensees will be authorized to purchase a maximum of 6 Major Markets. The spectrum sales are expected to bring in trillions of dollars into the US treasury if the licensees don't go bankrupt first.

Oregon Scientific sells a great 24hr digital clock that also includes the temperature.

The digits are approx 1" with the temp(F or C) displayed on top and the time on the bottom in either 12 or 24 hour format... no seconds displayed. Have had mine for about a year and seems to be very accurate... around 1 min per year... cost if I remember right is about $24... If you live in California, Fry's has them.

>

Yes. The radio is sold by Radio Shack, and it is on their
website:

http://support.tandy.com/support_audio/40465.htm

And the NWS page about the SAME digital codes:

http://www.nws.noaa.gov/nwr/nwrsame.htm

It decodes and displays the SAME codes broadcast by the NWS (the
5-15 second digital junk you now hear on the NWS). You program
the code for your local area, and the radio will react to them.

You can even have it activate an external device, or X-10 module,
when an alert comes in.

I'd love to play with one, but the weather is too "boring" around
here to justify it...

Radio Shack has on on its new catalog. Also, go to www.noaa.gov and
search through until you find the weather radio pages. The SAME system
involves transmitting databursts on the air. A receiver is programmed
with a six digit code to alert and display the message.

I am wondering if a modern low band VHF-radio with CTCSS would be compatible with military radios (e.g. prc25, prc77) that uses 150 Hz tone-squelch?

The closest CTCSS-frequency seems to be 151.4 Hz. Will that be close enough to open the squelch on the military radio?

I've run into this also. The quick and dirty fix was to determine
which frequencies were interacting and then doing a different mix and
match in the two scanners.

For example, if 154.725 in Scanner A causes 450.4125 in Scanner B to
lock up, then put move both frequencies to the same scanner.
Eventually you'll get a combination that will play well together.

US military FM transmissions employ wider deviation than
(USA) VHF land mobile stations and are too wide for
land mobile receivers with decent IF filtering.

The squelch on a narrow band FM receiver often slams shut
on voice peaks when listening to wider military FM signals.

>would be and/or how such non-radiocommunications are regulated in
>Canada.
>
>Thanks

```
1 - Cable television.
2 - Local area networks running at RF rates.
3 - Various wired communications systems using RF signals confined to wires or
fibre optics.

Regulation depends on the specific device.
Cable television is regulated by the CRTC.
I am personally aware of Canadian communications systems which operate within
buildings, or complexes of buildings, using FDM (Frequecy Division
Multiplexing) to permit multiple voice conversations; and operating in the HF
band from 7 to 10 MHz. So there are a lot of communications "with artificial
guide".

Contact Stridsberg Engineering, Inc., PO Box 5040,
Shreveport, LA 71135-5040, telephone (318)861-0660.

This is not a product endorsement. I tested a Stridsberg
Engineering MC202 receiver multicoupler for use with one
antenna and two receivers in the September 1997 issue
of Monitoring Times.

I used two radios for qualitative measurements. Two
different test equipment setups allowed me to measure the
loss quantitatively, including a spectrum analyzer, tracking
generator, digital RF millivoltmeter, and RF signal
generator (see the performance graph in my MT column).

Here are excerpts from the Stridsberg Engineering
application notes:

"The basic use of the antenna multi-coupler is to
enable the use of one antenna system for several
monitoring receivers or scanners. The advantages
of the multi-coupler for those applications
requiring several monitoring receivers is in the
port-to-port isolation of the coupler. This will
ensure that there is no interaction between each
receiver's local oscillators, and that the from
end of each receiver is properly loaded at 50 ohm.
The second obvious benefit in using the coupler is
that only one major antenna system have [sic] to
be maintained, and if a preamplifier is used, only
one is needed to feed up to four receivers...."

"...The basic connection for multi receiver use
is to connect the antenna to Port 0 and the
receivers to Ports 1 through 4. Unused ports may
be left open with little effect on receiver
performance (isolation and less in the coupler
will suffer), but to reduce the effect of extra

loss a 50 ohm terminator should be connected to
the unused port(s)."

These are some questions I have about the Icom IC-R10.
- Does anyone know what the ring conductor on the CI-V interface does?
If anything at all???
- Where can I get a discriminator audio output in the radio to connect
to DTMF, CTCSS, etc decoders.
- Is there a hardware squelch detect line available?
(for connection to a computer)

Thanks,
Brian Lee

$300.00 includes monitor or swap for a Uniden BC 895 (trunktracker base) or would consider a Sangean ATS 909.

Perfect for dedicated use for packet radio, decoding ACARS, WEFAX, POGSAG, etc..Not a real speed demon in windows but does a good job for it's type. I used it for DOS programs mostly.

Due to weight, prohibited from shipping . Can deliver to SF Bay area if needed.

There are no bad sectors on the hard drive and it has been defragged and scanchecked.

IBM PS2 /70 386/25
6MB Ram
60MB IBM HDD (drivespaced in DOS 6.22 to 120MB)27 MB free (deleting windows and MS office will give you considerably more)
MS mouse (PS2)
IBM keyboard
IBM Color VGA Monitor (15") viewable (14.25")
loaded with DOS 6.22,Windows 3.11, MS Office with Word 6.0 and Excel

I live in Pleasanton, CA..

Thanks

>

Here is another way to utliize the not having to
worry about this problem....

In your area you will discover that there are
agencies who work fine off the supplied indoor
put-it-in-the-back-of-the-scanner.

This means that you get both dispatch and
field unit...in full stereo sound.

First find which ones you get and then decide how
you are going to schedule them for the scanner
chosen. Most of the newer scanners are very sensitive
and pull in channels many miles away.

I can pull in San Jose Calif from up here in the
SF area with an in-the-scanner supplied antennae.

Also some will work without an antennae. OH jes.
Mostly in the 488's....489's. Also 800's work
fine this way too. As long as they are near you,
their antennea.

What this does is makes your dependence upon outdoor
antennae lessened ...

In my Jeep the 800mghz scanner I don't even have
to hook up the indoor antennae I have for it. It
q works without it just fine.

Once you determine which ones operate fine with the
supplied antennae then you can concentrate on locating
those other agencies requiring an antennae for that
scanner.

One technique is to put one agency in each scanner.

This way there is very little interference. I have none
and I work four as I said in my jeep plus the 800 plus
four portables.

Indoors: same. I know that San Francisco operates fine
of supplied antennae and most of the peninsula
channels I listen to. Cities nearby same. But
in some instances you will only get dispatch.

That is when you need the outdoor kind. IF you cannot
hear both sides, then outdoor or a Grove Enterprise
system for indoors is required.

Bill Conduit
etc.

If the First Amendment allows bribery of our government by big corporate lobbysts, then it ought to be limited. But I do not believe that is a legitimate interpretation of the First Amendment pertaining to campaign finance. Limiting money for bribes shouldn't be limiting speech.

Clinton - a liberal? Are you ever off base on that one!

But what is truly shocking to me is for the hypocrites like you who claim to be Christians on one hand and on the other hand bash people for having the values of Jesus Christ - liberal, open minded, caring, tolerant, compassionate...

You would have been one of those who nailed Him to the cross.

ALL THIS EQUIPMENT IS IN ITS BOX UNOPENED AND BRAND NEW
I ordered an extra set of this top of the line amateur radio
enthusiast equipment and need to get rid of this hardware before
Christmas :^)
I have all the accessories to connect the handheld equipment to your
PC and program it, connect it to your car (cb style), or go mobile with
it. You'll love this stuff!

I. Yaesu FT-50R PC Programmable Handheld Transceiver

Wide Multi-band Receive 76-200, 300-540, 800-999 MHz
3-Selectable Rx modes (AM and Daul FM [FM-Narrow, FM-Standard])
5/2.5W Ultra Compact Construction
Rugged MIL Spec MIL-STD 810 Rated for Shock and Vibration
Auto Range Transpond SystemTM (ARTS) uses DCS to automatically
poll
other stations, indicating if they are within simplex range.
Digital Coded Squelch (DCS) is used in the commercial industry,
DCS
provides 113 unique codes in addition to the standard CTCSS tones.
112 Memory Channels each stores offset, CTCSS/DCS Encodement &
power
level.
Alpha-Numeric Display up to 4 characters may be used to name
each
memory channel.
Digital DC Voltage Display monitors current battery voltage.
MARS/CAP Modifiable with proof of permits.112 Channels
5/2.5W Ultra Compact Rugged MIL Spec Modular Construction
Full 5 Watts Power Output at DC 9.6V with 4 selectable power
levels
RX/TX Battery Savers
Direct FM for Better Voice Clarity
Alphanumeric Display
Unique Water Resistant Clam Shell Design Permits Rear Mount
Battery
Digital Voice Recording System
Check the Yaesu Site, http://www.yaesu.com/ft50.html
for specifications link on this great product

II. Yeasu Rubber Case Protector Fitting FT-50R

III. Yaesu ADMS-1c Advanced Data Management System

3.5" HD Diskette with Windows PC Program
Serial Interface Cable to Connect to a 9-pin Port
Allows Keyboard and Menu Programming for FT-50R

IV. Yaesu Cigarette Lighter Adapter

V. Yaesu Voice VOX Headset (2way)

VI. Yaesu FNB-42 Ni-Cd Battery

DC 9.6 V 1100 mAh

VII. Yeasu CN-3 Antenna Adapter

BNA to SMA Adapter

VIII. Diamond K-601M Antenna

UHF Hideway trunk Mount
6 ft. Teflon Coax PL-259 Adapter

IX. and X. Maxon 49 49 MHz Two Radio (Quantity 2)

Portable FM Transceiver
Offers VOX Voice Activated Command or Standard Push to Talk
Unique RX/TX Signal Through In Ear Microphone

If You are interested in this equipment, please make sure to reply
via e-mail, as my ISP has a pretty shoddy newsfeed. Thank you.

Regards,
Anup

I second that and would add don't vote for any socialist Republicans.

Republicans and Democrats are just two factions of the same party. No
way to get this sort of thing passed in Congress today without
Republican help.

The advice given to you by Bill C. is vary good, especially the terminate the unused "ports" on the splitter. One caveat that Bill forgot to mention is that you may experience some interference between the radios. I tried to do this myself once, and I got a "putt-putt" sound in the radios. E.G.- scanner #1 stops on a signal, I could hear this noise in the background the whole while, just happens that the noise frequency matched the scan speed of the other radio(s).

Your missing the point, did you ever hear the phase "The Customer Is Always right" AES is treating their customer as if they were crooks.. That's not good business practice or a way to treat people...

It make's no difference what there return policy is, they must follow the law. and the law states, the consumer has 30 days to cancel a said contract.. This law applies to every state.

David, The AOR-8000 *VINYL* case is a near perfect fit. Do not use the
leather case, as it will not work. Just remove the belt clip(I would
not recommend cutting the vinyl around the belt clip area, it would
probably tear with usage since it is not reinforced down far enough)
and you should be fine. If desired, you could punch a small hole to
allow charging/powering when in the case.
I have also heard that Grove is going to have a custom leather case
which may be worth looking into, probably allowing the belt clip to be
attached and proper hole for charging. As of about 2 weeks ago, they
did not have them in. I really don't know any keypad tricks(other than
reset), but I am interested as well. Hope this helps, Matt

Regarding the South Carolina Highway Patrol going to 800 MHz, they and some of the other state and local agencies are using 800 MHz in specific areas ... generally close to the interstates and the larger cities.

District 4 (York, Chester, Lancaster, Cherokee, Union and Chesterfield Counties) is still completely on low band.

To the best of my knowledge, there is nothing to preclude troopers from using the low band radios, even in areas where the 800 system is up and running.

I have also not seen any reports that the SCHP system was switching from an analog to digital format.

Can you say, "POLITICAL CORRECTNESS" ? Can you say, "ANIMAL FARM" ?

Freedom of speech is only allowed if it is approved
by the Elite. When these people who live and breath
political correctness start to get into the different
branches of the gov't, it will be eventually that freedom
of speech will only be allowed if it agrees with the gov't
point of view. Could see another "Alien & Sedition Act"
equivalent being put on the law books soon.

We are only allowed to know what our government wants us to know. To know anymore would put the government at risk. No more technical information, no more modifications, no more freedom of speech, no more freedom period. In the 30's the Nazis burned books that the Nazi government didn't like. Now, the American government is banning printed information. Are technical drawings really a threat to society? The Nazis thought so. It would appear that Radio Shack will do whatever the FCC asks regardless what the Constitution says. If you would like to voice an opinion please let the contacts listed below be of assistance.

> Return policies were invented by the BIG GUYS who have no ethics,
> and who don't give a hang about spreading the losses around to
> all their customers. You call THAT "customer loyalty"?

The small guy can easily be put under if he gets a rash of returns. The "big guys" know that only a small percentage of their sales end up as returns. They can afford to handle those returns in a pleasant manner. (some also do un-ethical things like re-shrinkwrapping packages) They also have a lower overhead (true, at the cost of reduced help and support), so they can still often offer a lower cost to the consumer. (although many smaller stores will match prices) They can also offer something the small guy can't - a much larger selection.

> Gambling casinoes do not lose. They can't lose. They don't
> gamble. They play and structure the games so that the pay odds
> are less than the mathematical/probability odds. They pocket
> the difference between those odds....with an absolute certainty
> over the long haul. And who pays the winners? Not the casino.
> Try....the losers. A loser loses $100. A winner wins $85. The
> casino pockets the $15 for its time and trouble.

All businesses operate that way. You're certainly not in it for "being nice", are you? Of course it's tough to compete against the "big guys". But it isn't just electronics. Where do you buy food? The supermarket was probably the first of it's kind - the first "superstore". Put most of the small grocers, butchers, bakers, etc. out of business. Now we have superstores for toys, consumer electronics, computers, tires, hardware/lumber, pet supplies, etc.

Is ham radio next? I dunno. Many old time stores are gone (ie: Gilfer). The biggies with cheap mail order are taking over. Of course, the average age of hams is still creaping up. It's a race to see if ham superstores can be created before the last ham operator dies of old age.

> Despite the name, I strongly urge you and the rest of "radioland" to purge
> the "*Radio* Shack customer mindset" from your heads and become
> informed, educated buyers. This bullshit of "You got the questions; we got
> the answers..." has got to come to an end if radio is to survive as a
> pleasurable and rewarding pursuit into the next century.

The one last advantage of the small guy - knowledge. This is where small businesses need to concentrate. Not on a few dollars difference in price. But on the knowledge that will save the customer even more money in the long run. The trick is convincing the average consumer that's it's worth

paying that little bit extra now. Most of us are too concerned with saving a few cents.

> The bottom line is that Radio Shack's "satisfaction/money back" policy
> costs ALL OF US a lot more money over the long haul, so they can
> pay back the minority who won't be satisfied. I prefer to take my chances
> by educating myself to a product BEFORE I buy....and at that point, all I
> want is a low price and an assurance that it is not defective.

What's worse of course is Radio Shack's inept sales drone force. Not only are they generally unknowledgable about their products, but also often quite rude. I got into an argument with one who wanted my name/address/etc to correct a sales receipt error he made (punched in the wrong qty of a 99 cent part). Threatened to "call mall security" if I didn't cooperate. Guess what Radio Shack? You lost a 20 year customer with that one. I haven't set foot in a Radio Shack since, and don't intend to. Was it worth it to build up your mailing list?

310. Frequencies wanted : Melbourne, Australia

Newsgroup: rec.radio.scanner
Date: 1997-10-03 00:00:00 UTC
From: Paul Gunn <gunnp@spamno.fri.cri.nz>
Message-ID: <34348C34.665F@spamno.fri.cri.nz>
Source record: 184252

I'm heading to Melbourne sometime soon, and I'm looking for some info on scanning there.

Firstly, my understanding is it's legality is similar to NZ, "don't chase ambulances and don't tell anyone what you hear and we'll ignore you". Sound about right? If it's more restrictive I'd *really* like to know.

Secondly, I'd like specifics for what to listen to in and around Melbourne, or general band plan information if you can't help with specifics.

I'm quite happy to try to fill in the same sort of gaps any Ozzie may have about their small neighbour.

I've heard Australia before without leaving home. During some parts of the year, a local channel in my town gets signal from some suburb in North Sydney. Quite odd.

Thanx, email replies possibly best (after removing antispam insert).

Glad that 895 is working well for you, Andy.

> Post those BG&E freqs if you've got em!

Ok, here's the freqs I have punched in. Not sure all of them are trunked,
but it works so what the heck:

852.3375 .8875
853.7625
855.1875 .3625 .4125 .6125 .6375
856.2875
857.2875
858.2875
859.2875
860.2875

Here's my talk group notes from one night of monitoring last week:

176 ?
496 "deposit?" "Paper Mill" "Delaney Vally Rd."
720 "Street Light Dispatch"
752 "Car 1458..."
816 ?? Trouble -- "by Northrop/Grumman Aerospace"
"Crain Hwy..."
848 Front Street Trouble -- downtown Balt.
880 "Mink Hollow..."
912 Westminster Trouble
976 "Old Skagsville Rd. and Rt. 216..."
1296 "Central"
1328 "Gas Dispatch"
1424 ?
1520 Music...? (Someone playing "DJ" :-)

Hope that helps!

BTW - Is there a mailing list for swapping notes on MD area freqs and
talk groups? I don't wish to clog the national/general newsgroups or
mailing lists with this kind of traffic. If there isn't already such

a list, I'd be happy to start one here.

Regards,
Charlie - N3HAZ

314. Listening Post 1.0 is here!

Newsgroup: rec.radio.scanner
Date: 1997-10-03 00:00:00 UTC
From: "LPCOM.COM" <lpcom@io.com>
Message-ID: <611fr1$cb1$1@nntp-2.io.com>
Source record: 184325
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The first major advance in scanning since the introduction of
the computer controlled scanner. Check out http://www.lpcom.com
for full information.

Design Goals

- Windows 95/32-bit system with full multitasking.
No more do you have to stop scanning to edit banks,
channels, etc. Generate reports, search the database,
all without missing any of the action.

- Tight integration with database. Listening Post utilizes
ODBC to connect directly to Access or Sybase SQL Anywhere
to store channel/search information. This ability enhances
the scanning experience so dramatically it was reason
enough for us to develop this system.

- Built in wave recording. Sound data is stored directly to
the database to allow full random access playback. One
can playback just the activity from a given agency, etc.
There is even an 'Instant Replay' button.

- Full duplex support. Playback can occur simultaneously
with recording.

- Scanning speed is limited by the radio, not the software.
Scanning speeds of up to 80 channels/sec are possible,
even on a heavily loaded PC. No software that runs in
a dos window, or that does not have driver support can
make this claim.

- Familiar user interface. Listening Post resembles Windows
Explorer in both the main interface and the playback system.

- Full featured scanning support. CTCSS filtering, priority
scans, per channel delays, etc. are supported.

- Audio processing plug-in support. Listening Post supports
plug-in components that will process the audio to achieve
some desired result. Included in the full version is a
speech inverter component. More will be available as they
are developed. With release 1.1, the plug-in specifications
will be published on the web page, allowing any interested
parties to develop their own plug-ins.

- Radio dependencies are external to the core system. This
will allow us to add support for additional radios quickly.

I had been meaning to order a PRO-2006 service manual for a while. This prompted me to go ahead and do it. Called 1-800-THESHACK and placed an order. I was told that it was available and would receive it in 7 to 10 days.

We'll see if I actually get it or not.

I don't understand what you're asking, exactly......

> -The precedent for licensed transmitter technicians was established
> -a zillion years ago. There is no precedent for licensing receiver
> -technicians. And by the <deities of choice>, there damned well
> -shouldn't be....... And legality has nothing to do with it.

> Why not? Tell me why you should be able to listen to my private
> telephone conversations?

I shouldn't !!!! To listen to telephone conversations, one should
be required to have court permission, first....and not from just one
judge, but three, at least.

The thing is.....cellular and cordless units are NOT telephones.
They are RADIOS. Their respective industries merely created and
fostered the illusions of these being telephones. There is no
inherent privacy to radio waves and it cannot be legislated, same
as those stinking Congress-critters can't legislate what you can
and can't do in your bedroom with your consenting lady.

> -The law should never extend into your home to declare what you can and
> -can't do with a passive device.

> So I can take my passive device (small amplifier with aligator clips)
> and attach it to your telephone line at the pole (off of your property)
> and listen to your private telephone conversations?

We're not talking about wireline and fiber here. We're talking
RADIO. Besides, wire and fiber belong to someone. You cannot
invade the property of another without permission or authority.
You do not have a choice as to the radio waves that invade your
skull, gonads, and other cherished possessions, friends, family,
etc. Besides, radio waves are not inherently private.......

> No there are
> laws against that. Well then why can't I take my inductive pickup and,
> without actually touching any wires, listen into your private telephone
> conversation?

You can, I suppose, if you can get it anywhere near a line without
trespassing......

> Same law applies. Well then why shouldn't there be laws
> against you listening to my cordless phone or cellular phone.

Because radio waves are just the opposite. You have to intrude
somewhere to listen to wireline and fiber conversations. On the
other hand, your radio waves intrude upon others, same as the sound
waves you emit and the light that bounces off your body as you
drop your britches in public. (Indecent exposure!)

Same as if you were talking in a restaurant about something private
and secret and I'm at the table near you and can hear your voice.
Tough. You should have whispered or talked in a language that
I can't understand.

> The ONLY difference is that one uses a wire and one does not.

Big difference, pal. Besides, privacy is incumbent on the sender
and the intended receiver, if it is to be an issue. If you want
private cordless and cellular communications, then use a simple
DVP encryption device. Or insist that your cellular company provide
it. Use spread spectrum cordless phones.....not those cheapo 49 MHz jobs.

> A knife is a "passive device" but there are laws limiting its use.

No, it isn't passive...not if you invade someone's body with it.

> Hammers, saws, tree limbs, rocks are all passive devices but you
> can't use them to bring harm to others.

When you do, they become active devices. On the other hand, when
you send a radio wave (or a voice sound wave) across my property or
through my body.....you better have it encrypted if you want privacy.

> -The fact that the law does intrude into your bedroom...
>
> But when you listen to the private conversion between a man and
> his wife you might as well be intruding into their bedroom.

On a wireline or fiber, sure. But if they are stupid enough
to talk sex and other sensitive stuff on a cellular or cordless
phone, then they deserve for the world to listen.

> -...and even between -your sheets is no different than laws requiring
> homage to the King..... -or "heil Hitler"..... or ....
> -
> -IMHO.

> This sounds like typical liberal/libertarian trash.

So now you have to get nasty? Take a hike, Spike.

Try it with the antenna removed....if it is still there it is probably
an internally produced frequency or "birdie".
Of course, if it is only a new phenomena, disregard the above.
If it is a birdie, you are stuck with it.
Only a suggestion.
Brian

This is only partialy related to scanning but has several uses including scanning, but...

Does anyone know what if any software packages can decode Touch Tone (DTMF) frequencies and display the corosponding Digit(s) that were dialed? I have used both GoldWave and SoundForge but neither does this as an automatic function. They can both be used to see the frequencies produced by my scanner but then you have to look at them and figure out the tones manualy. I'm lazy and want something that will do the math for me!

The local Police Dept uses touch tones to signal their AirCraft over the radio and I've been curious for a while about what numbers/digits they are using.

> extremely appreciated.

The previous post mentioned the ONLY proper way to use one
antenna to feed multiple scanners. Let me add a few inside
notes, if I may......

First, get the splitter that has EXACTLY the number of outputs
needed - no more and no less. If you have four scanners, then
you need a splitter with one input and four outputs.

If my some chance, you remove a scanner, then that empty port
needs to be terminated with a screw-on resistor, called a
"termination", typically 75-ohms. Radio Shack sells them, too.

There is a problem with splitters and running one antenna into
two or more receivers: LOSS. What happens when you put a "Y"
on a garden hose? 50% of the water goes one way and 50% the other.
A 4-way splitter will have 25% of the original signal at each port.
A 3-way will have 33% at each port, and a 2-way will have 50%.
Brass tacks. This loss can't be avoided. Except if you don't
use the right splitter, and try to use "tee's" instead, then the
LOSS will be even greater. You have to use a splitter, but frankly
the best choice is a separate antenna for each scanner.

They already have...

Not just anyone can buy and install freon (R-12) anymore and get into the business. At least not without a lot of expense. In many localities a licensed electrician is needed for anything past changing light bulbs (are they next?). The fact is, the government has stuck its nose into just about every facet of life anymore by virtue of declaring their actions to be justified by "public safety" in some form or other and is planning even more escapades. The latest thing is the "RF Exposure" boondoggle which threatens to make a misery of a fun hobby in populated areas (don't believe me? observe how regulations always get more and more repressive against the common joe) with its avenue for money happy attorneys to sue hams for RF exposure when the problem is really RF interference to some sensitive home electronics device.

My friends, this lunacy will not stop until the good people of this country are truly sick and tired of it. However, so long as there are not bread lines nor rationing for gasoline, the people will tolerate an incredible amount more of this abuse.

We live with bureaucracy gone berzerk. 3 and 1/2 years after the "Republican Revolution", I'm sorry to say that nothing substantial has been accomplished (I suppose someone will say "I told you so" ... spare your bits) and we are mired ever deeper in the quagmire. The FCC is a joke and other agencies are dictating policy to an FCC that these days doesn't have enough technical competence to refute the politically driven mandates handed to them. Congress doesn't understand the concept behind cellular radio and seeks a Soviet Union style ban to cure a supposed problem. If there is a problem then let technology fix it. But to make criminal actions taken by individuals to decipher electro-magnetic radiation that passes through their

bodies and across their property is absurd. Only in America friends.

"Looking" or bought? I can't imagine AES shipping stuff all around
the country for people to "look at". Did you BUY it?

> While waiting for the antenna to arrive a friend came over and told me
> that he had a Hustler 6-BTV vertical that I could have, so since it was
> too late to stop the shipment

Whose responsibility was that? Surely not AES's?

> I waited until the box arrived a day later and called AES.

Why didn't you just refuse the delivery?

> They said they could not take the antenna back because
> they have a "no return" policy on antennas, towers, cable, audio tapes,
> books, vidio tapes, kits, just about everything unless it's defective...

I can well imagine..... and each of the things you mentioned
sure have good reasoning behind the policy, too. People are
fond of copying books, tapes, kits, etc. Cable has to be cut.
Antennas and towers are costly to ship.

>then they will "work with you" to get it repaired or replaced.

Now that's decent......sounds like service to me.

> I told them that I had never even opened the box, or the
> shipping invoice for that matter, and they said that I could not return
> it because I may have removed the antenna and put a brick in the box and
> resealed it!!

Well? How would they know? And there are laws pertaining to
reselling "handled" merchandise.

> They also said that they could not resell it as new since
> they will have to open the box, again I told them that I had not even
> opened the shipping box let alone the antenna box...still NO RETURNS.

Well, they would have to open the box to make sure you didn't slip
'em a brick or two.

> Now I can see if I special ordered a monster HF beam and had the parts
> all over the garage floor, but a simple wire dipole antenna??

You DID order it, right? Who failed in the "contract of sale" here?
Doesn't sound like they did......

> that's a stocked item?? NO RETURNS??

Mail order? Where freight, handling, and bookkeeping cost hard
cold cash? Many companies levy a 20% restocking fee on nonsense
returns. AES apparently uses the KISS principle, instead.

> I have ordered thousands of dollars worth of stuff from AES over
> the past 15 years and never expected to be treated like that.

How exactly did they fail in their "treatment" of you? And how do
past purchases affect the contract of sale for future purchases?
Did they ever tell you that for "X-thousands of dollars worth of stuff",
that you'd get a freebie or some other premium? If not, then each
sale stands or fails on its own without relationship to others, past
and future.

> My point here is that if your in the mail order business you have to
> allow some returns that are within reason,

Why do you have to do that? It costs a lot of money to support
"looky-lou's"

THAT increases the cost of doing business, especially to other
customers who have to pay higher prices so you can "window shop"
by mail. THAT ain't fair to those who want the lowest possible
price....which includes just about everyone.

> it's just goes along with the territory. AES has lost my business for
> good.

Judging from what you said in your article, it sounds to me like they'd
have a helluva time making a fair profit in transactions with you.

> I'll find other places such as HRO and R&L Electronics and a host of
> other "small" dealers to do business with.

One wonders if they're reaching for their bandanas to mop their
brows with..... I rather imagine AES wouldn't mind at all if the
cost of doing business went UP for HRO and R&L. Theirs certainly
went down.......

> So beware if you order from AES, the "S" does not
> stand for Service for the customer.

Noooooo, I believe it stands for "Supply". And to the best of my
knowledge, "supply" houses are in the business of SELLING. Service
in a sales organization consists of supplying quality merchandise at

a fair cost with some attention paid to getting the order right and
shipped on time.

Looks to me like it was you who soured that transaction; not AES.
Looks to me like you were not an informed buyer.
Looks to me like you had not done your homework.
Looks to me like you have no feeling for the COST out of AES' pocket
that it took to get you that antenna to your door in a short time,
in exactly the condition and specification that you wanted.

No offense, pal....but....would you mind running this by me again?
Maybe I missed something....

What is the "REAL" range of these radios? Could two be used to talk
between two brick homes a mile apart?

Ahhhh, AmericKa the beautiful! With Comrad Bill in the White House,
and Socialism warming the hearts of every leftist in the land, soon we
will finally arrive! Our long sought after dream of a world wide
communist society will end and we will awake to a New World Order.
One World, One Flag, One True Religion: Utopia at last!
God is dead, but Bill Clinton feels your pain:
Bow before the king!

Wake UP! Do the leaders of a communist government stand in the bread
lines with the citizenry? HELL NO! They eat the best food and drive
fine automobiles while the people suffer greatly!

Is Ameica about to become AmeriKa?

I cannot believe that the damn government is now killing off the
First Amendment!

Surely they are going to come and take all the guns away from the
people because they must realize that all of this heavy handed
government is going to cause a huge outcry and maybe a revolution!

GOODBYE AMERICA! Hello AmeriKa!

Bill, here in TEXAS, our lousy, scummy, no good government has passed
a law that will soon take effect.
I am not kidding at all about this: If you want to get ANY home
repairs done, you must meet with in front of one of the following or you
will be breaking the law and subject to MAJOR fines:

1. An attorney.
2. Your mortgage company representative.
3. A state official.

You CANNOT have your home painted, plumbing fixed, or dishwasher repaired without following this law.

Here in Texas, we are in deep trouble. George W. Bush is a whimp and a worthless democrat calling himself a Republican. Noone stands up for the citizen here in Texas except the citizens themselves. If Goerge W. Bush runs for president, DO NOT VOTE FOR HIM! He allowed all of this harmful junk to come down on the families of Texas! Vote for Pete Wilson. He will be running too!

Liberals will never realize that their method of government just does not work. The "open minded", "caring" and "tolerant" liberals of the Clinton Klan are now attempting to limit the First Amendment.

"Son, why are you here?....Well, I was caught reading subversive materials. I was reading a schmatic and working on my scanner when the tanks pulled up in my front yard! I couldnt believe it! The next thing I knew, Federal agents led by Janet Reno crashed through my door....The FBI pointed guns in my face and told me to hand over the illegal, subverive materials. They told me that the penelty for reading something that had been outlawed by the state was at least one year due to sentencing requirements."
"And why are you here sir? I too was caught reading what the judge called "subversive" materials. He told me that my Bible was outlawed because it suggests that the people are really resposible on only one entity whose name is God. The judge said that I might be persuaded to blow up a Federal building if I continued to read the radical views expressed in the Bible."

Someone needs to develope a single chip scanner. An electronics mag I once owned had this TDA 7000 chip produced by Texas Instruments articule which was a radio on a chip. It could be used to tune in many frequencies, but had no scan capability, nor a freq counter, but it worked great!
All we need to do is start selling a single chip radio here and it will have the effect of going around all of these stupid, heavy handed, government regulations on the scanning industry. And, it could be sold as components that snap together to produce a radio if you so desire!

How long untill a law is imposed upon us that says you cannot buy chips like the TDA 7000? Surely the FCC is going to become the next IRS in America!
House sweeps for scanners and Tabacco! Ohhhhh NOOOOOOOOOO!
Knock! Knock! Knock! OPEN UP! We know you have illegal chips in there!
New Law: Worship your government or it will kill you!

avid shooter
-> I run into the same problem in a grander scale every day. What if
the
-> FCC created a version of the BATF FFL license so acknowledged repair
-> facilities could get what ever it is they need to fix whatever.
Your thoughts?
-
-Well......how's about if they passed a law that said you couldn't
-buy oil for your car and put it in yourself unless you possessed
-an oil-changer's license?
-
-Or, you couldn't change your light bulbs unless you were
-a licensed electrician?
-
-Or change the tires on your bicycle?
-
-Ad nauseum?

You mean like the law that says you can't buy freon?
What do laws designed to "protect the environment" (yeah right)
have to do with laws to protect a person's privacy?

-The precedent for licensed transmitter technicians was established
-a zillion years ago. There is no precedent for licensing receiver
-
-technicians. And by the <deities of choice>, there damned well
-shouldn't be....... And legality has nothing to do with it.

Why not? Tell me why you should be able to listen to my private
telephone conversations?

-The law should never extend into your home to declare what you can and
-can't do with a passive device.

So I can take my passive device (small amplifier with aligator clips)
and attach it to your telephone line at the pole (off of your property)
and listen to your private telephone conversations? No there are
laws against that. Well then why can't I take my inductive pickup and,
without actually touching any wires, listen into your private telephone
conversation? Same law applies. Well then why shouldn't there be laws
against you listening to my cordless phone or cellular phone. The
ONLY difference is that one uses a wire and one does not.

A knife is a "passive device" but there are laws limiting its use.
Hammers, saws, tree limbs, rocks are all passive devices but you
can't use them to bring harm to others.

-The fact that the law does intrude into your bedroom...

But when you listen to the private conversion between a man and
his wife you might as well be intruding into their bedroom.

-...and even between
-your sheets is no different than laws requiring homage to the ing.....
-or "heil Hitler"..... or ....
-
-IMHO.

This sounds like typical liberal/libertarian trash. Ideas that
say that I should be able to do whatever I want when I want so
long as I'm not hurting anyone else. Well listening in on someone's
private conversations is "hurting" them. It violates their RIGHTS
to privacy.

"Laws are designed to be a guide to a civilized society but they
will not prevent certain people from acting in an uncivilized
manor." -- Clarance Thomas

I realize that we can't really legeslate morality. Tell me what
is moral about listening into someone's private conversation, legal
or not.

Hey folks,
I have a friends Yaesu FT-50R which seems to be stuck in the
European band plan. The good news is it tunes all freqs from 76 MHz to
999 MHz (no gaps, including 222 MHz), the bad news is it will not
transmit from 146 to 148 MHz and from 440 to 450 MHz. I have the ADMS 1C
software package and have tried numerous software tricks. I have not
opened up the radio yet as he has not given me the green light for
hardware mod verification/de-mods.
I know these are scanner newsgroups but I respect the opinions of
many of you and I've noticed a lot of FT-50 users here.

Thanks for any help,
Steve S

I'm a bit confused by all the AES no antenna return stuff. A year of so ago I bought a Cushcraft 432 antenna from the Las Vegas store. It was what they call a "demo" ie. it had been out of their hands. I asked them what was up with it and they told me someone purchased it for FM use and was unhappy with the SWR as this particular model is cut for the CW/SSB part of 70cm. The buyer returned it paid a restocking charge and I bought it at a discount. I can't say what the difference was in the no return case that started this thread but I know in this other case they seem to have taken an antenna back.

The original poster seems to want everything. He orders something then changes his mind and expects the vendor to smile and return his money. A bit unreasonable.

Jerry

I'm not offended. You just made it impossible to have an
intelligent discourse with you.

> Look, Bill, I'm not trying to nasty but I will be blunt.
>
> I disagree totally with your absurd argument

There you go again. Garbage? Absurd?

> I think you haven't a clue how to run a business.

After twenty years of my own business and 35 years in business? Really now?
There you go again......

> The honest businessman is one who values his integrity and his reputation
> and is committed to his customers and to delivering the best products and
> service he can even if <gasp!> sometimes that's at the expense of the
> almighty dollar.

You talk as if business is a one way deal.

I believe it is a two way deal. 50-50. Nothing more. Nothing less.

> I speak from some experience.

So do I.....a lot of it. But not only do I value my integrity and
reputation, as you put it, I also have dignity, self-respect, and
a strength of conviction that contracts are two-way, 50-50.

I also know that "red carpets", drums, and bugles cost a lot of money.
If I provide those....sure, I'll pay for 'em...and then pass the costs
on to the customers. What if they don't want red carpets, drums, and
bugles?

> For the past 10 years, I've run a business
> myself selling a packaged software product.......
> .... My return rate is under 0.1% .....

> compared to an industry standard of about 10%,

There it is. The little guy needs to produce a superior product,
in which case normal "return policies" are moot. Good products
sold to good customers don't come back.

On the other hand, you are in the software business.....a business
that differs markedly from hardware. Your overhead and cost of sales
are a LOT lower than if you peddled hardware. All you got to lose
on a return is ruined packaging....shrink-wrap, if you're a high-end
software dealer; otherwise, you don't even lose packaging. You got
no inventory other than disks.....and the Internet even eliminates
the need for disks.

Your business IS different.....a LOT different. And so your
view of business will also be different.

> Sir, that philosophy is obnoxious to me. Life is not a zero-sum game.

I didn't say it was......

> You are supposed to add something to the world while you're here.
> You are supposed to leave it a little better than you found it.

Even though I personally subscribe to that philosophy, the iron-clad
container in which you put it is......arguable. Nevertheless, if the
plank holds true, then it is equally imposed on the customer as well
as the vendor. There are more customers in this world than vendors.
Customers rule. Vendors are servants.

But.....we are not slaves. There is a difference.

> When a vendor offers an unconditional satisfaction guarantee, yes,

No one can legitimately do that.....though all too often, they do it
anyway. It's nothing more than an assigned risk insurance pool or
even a chain letter or multi-level marketing scheme whereby it works
to some perceived extent.

In the case of software, your primary product is labor. That's different.
No wonder your returns are 0.1%. That makes it easy and cheap for you
to play into the hands of the slime merchants. You CAN play that game
and get away with it. And because it succeeds, it must be good. No?

No. Imbeciles win at the card tables once in a while. My Pa used to
say, "Son, blind hogs sometimes pick up acorns." Luck of the draw.
Time and position. Many variables make things work when they shouldn't.
Unconditional guarantees can't work without someone paying for them.
The pits is that the people who have no responsibility for it are the
ones who end up paying. That is most unrighteous and unethical.

> But, maybe, just maybe, sir, the vendor who's committed to your
> satisfaction can deliver that. Now, isn't that worth something?

There isn't an honest vendor on this planet who is unqualified committed
to my satisfaction. It is only a delusion and an illusion perpetrated
by those who profess it. Radio Schloque has one of the most ironclad
satisfaction policies around......and having been in on the inside, I
can attest there is hardly a more crooked corporation on the planet than
Radio Schloque. (The Mafia has more intestinal fortitude.)

But you can get your money back at Radio Schloque....that's for sure.
So it must be good..... <shudder>

> The crook is not the vendor who promises that you must be satisfied or you
> get your money back. That's an honest man.

Think about it. If he turns around and clips a dozen others to
make YOU happy, that's an honest man? Radio Schloque will repackage
and resell the same thing ten times. So when a nitwit buys it for
the tenth time and keeps it, satisfied, that makes Radio Schloque
an honest company?

<shudder>

Whoa! Lighten up, guys.

I'm not gonna take sides here -- you're both right, but your words are
getting in the way.

I agree with Bill to the extent that today's distressingly prevalent
habit of buying things just to take a test drive, knowing that most
merchants will accept returns, drives costs up for the rest of us.
But Bill, the way you said it couldn't have been better flame bait if
that had been your intention, which I'm sure it wasn't.

And Doug -- I really commend your "customer comes first" attitude, and
believe it should be the model for every business. But really, can
you honestly say the damage to your bottom line if someone returns a
software product is the same as if they return a $1,000 radio (which
is now used goods) on a whim?

I don't know which annoys me worse -- merchants with a "no returns"
policy, or merchants who will accept *any* return, unconditionally.

That's my position, and I'm sticking to it. :-)

The company name is Racing Electronics...

I seemed to have lost their catalog, but can find their adds in racing
magazines and newspapers. They have all kinds of headsets. They have 2 a
cheap one that works, or a more expensive version that works in comfort.
And if you and someone else wants to listen to the same scanner and
talk, for over 100.00 they have a dual headset with intercom.

goodluck, and i do not recomend being cheap here, a headset will hurt
your head if it is not comfy.

|>...
|> Principle.
|> You take your losses off your income tax like all other companies.
|> You don't stick it to your customers.
|> If you do you loose.
|>....

Principle.
You lose $100.
You're in a 50% tax bracket.
You deduct $50 from income tax.
You "stick" the other $50 to your other customers.
If you don't you go out of business.

Don't forget, "deduct it from your tax" means you just lose a little
less money than you would have for something you can't deduct.
(Except for a few legal tax tricks that probably don't apply here.)
If you'd like some tax losses to deduct from your taxes, I'll be
glad to sell you something for $200 that you can then sell for $100
and take off your taxes as an investment loss. (Don't worry, you
can take it off your taxes.)

I like reasonably liberal return policies and am often willing to pay
SOME amount extra to companies that have them. I'm also a lot more
willing to order from some mail order company if I can return the
equipment if it isn't up to my standards, particularly if it isn't a
commodity or an item I'm familiar with.

Companies without "good" return policies lose some business. Companies
with "good" return policies lose some money. It's a balance.

> you honestly say the damage to your bottom line if someone returns a
> software product is the same as if they return a $1,000 radio (which
> is now used goods) on a whim?

Yes, I think it is comparable. If you return my product, that copy is not resold except in exceptional situations. It's usually destroyed or given away, usually to students who can't afford to purchase, even with an educational discount. (Books usually sustain some inevitable level of damage and I won't sell someone a book that's dinged, etc.) I eat any shipping costs I may have paid. (When I say you get your money back if you're not satisfied, I mean it. You get all of it. Every penny.) So I'm out of pocket about 30%, and that doesn't count whatever labor went into preparing the invoice or the order, packaging it for shipment, etc.

Could a retailer accept a return of an expensive radio and move it as an "open box" special with at most a 30% loss on that item? Sounds reasonable to me.

Again, for me, the whole point is to conduct my business so that no one ever has a reason to return the product.

You and I differ in one important point. You seem to expect that customers routinely just want to try things out in case they may decide they may want them. You think they don't really want to buy anything, they just want free loans.

I assume they do have a real needs and that they do want to buy things that address those needs if only I can provide them. I assume they do like owning things that give them pleasure. I assume most of my customers are basically honest and sincere and that my job is to work with them before the sale to be sure they have the information they need to enable them to make good purchase decisions. I manage my return rate not by refusing to accept them but by taking responsibility myself, ensuring the customer gets what he really needs before he walks out the door.

And what's the surprise here? I'm the vendor. Of course I know more about the product than the customer does. If I don't take care to provide the information he needs, then of course there's a good chance he'll walk out with something he later realizes he doesn't want. If I don't take care of my customers, I don't deserve to have them.

I'll pay shipping and all if you would be kind enough to take this pre-ban R7100 off my hands. I guess throwing the R-9000 into the deal would be toooo much to ask so maybe I'll just have Salvation Army pick it up next week.

363. Re: Question: F, N, or UHF connnector for 9913 Cable?

Newsgroup: rec.radio.scanner

Message-ID: <01bcd114$2a4446c0$dd04440c@default>
Source record: 184024

Theoretically, the N-connector should offer the best result at UHF and
higher freq's.
In your case however, it is a moot point since the BC895XLT has BNC
connectors and you would have to use an adaptor to link to the
9913/N-connector.
Don't worry. Your 9913/UHF connector with BNC adaptor will be fine.

So long as EACH of those makes it clear, UP FRONT, what their policy
is, there's no problem. The buyer can make an informed decision.
Some dealers seem to be, shall we say, erratic about just how they
deal with their customers.

Marc, your ham status is irrelevant. You must abide by what the
government decides, unless you are of the opinion that bad laws should
be ignored. The commercial/GROL is probably the right place to start if
you want to be assured some privelege. 73, Brian/N0iMD

Daren, you're probably right. But when crack is so commonplace that a minor with just a few rocks gets this kind of response from the authorities, its probably time to move to a new community. Unfortunately, my earning power is probably not great enough to outrun the moral decay in America.

Very Good Condition.....200 Channel Base Scanner.....
Covers 30-54mhz; 108-136mhz, 138-174mhz & 380-512mhz
Only problem is a dim elf panel. This has not presented a problem for
me in use. Works & looks very good. Comes with antenna & factory
photo-copy of manual. I am asking $100.00 shipped to anywhere in the
continental USA via UPS Ground or best reasonable offer for the unit.
If interested, please reply to
radioman@localnet.com

I thought laws were passed by Congress. A nominally "Republican"
Congress.

There is no difference between the Republicans and Democrats except
rhetoric. And talk is cheap (except for Congress).

Were the Republicans in Congress duped by Big Brother Bill or are they
in league with him? You decide.

Simon

Last night, on Police band... I heard a Police Officer make a patched call to an individual's father (evidentaly the individual was underage) but anyway, i heard this police offices tell the guys father that he had been stopped in a routine traffic stop, and he had found crack-cocaine in the vehicle, well, in Florida, the laws state that the car would then become impounded, and property of the police dept. and the Crack, would go into evidence. Well this dickhead of an officer, let the kid go, and called his father instead what a way to handle a crack cocaine bust. Gee i wonder if I can get off next time I am crusing thru this town, and get stopped for something. Personally, I think that the cop should have "run him in" have the police dept. changed thier policy on crack cocaine charges?

what a gas... I wish that i had been rolling tape... un fortunately, i was rewinding a really good action tape of a Major fire... so it goes... oh well....

just thought SOMEONE should know...

Date: 1997-10-04 00:00:00 UTC
From: Phil Henry <phenry@phenry.com>
Message-ID: <01bcd0fc$d687eee0$77191dce@ccc>
Source record: 184060

NEVADA HIGHWAY PATROL RADIO FREQUENCIES

Ch# Receive Transmit Remarks Location
1 154.965 161.325 Region One Sober & Brock Peaks
2 151.070 161.325 Region One Resident Officers
3 150.995 161.325 Region One Resident Officers
4 161.325 161.325 Region One Resident Mobile
5 151.100 161.535 Local Dispatch - Apex Peak
6 151.025 161.385 Local Dispatch - Downtown B of A
7 150.775 160.965 Tactical Operations - Excalibur Hotel
8 150.775 160.965 Tactical Operations - Sahara Hotel
9 155.145 155.715 Emerg. Mgmt. Sunrise Mountain
10 154.905 154.905 Reno Local Dispatch
11 155.610 159.105 Elko Local Dispatch
12 155.655 155.655 NV LE Mutual Aid
13 155.475 155.475 Nat LE Mutual Aid
14 154.920 154.920 Mobile Extenders Amargosa Valley
15 159.150 154.770 LVMPD Channel 1
16 156.210 156.210 LVMPD Channel 12

NHP is currently running the old radio system and the new one in parallel, using the low band mobile frequencies and outputing on both low band and high band. When the cutover is complete the above frequencies will be used, except in some rural areas they may continue using the low band for some period of time.

Owners of BearTrackers Model BCT-7 should program the above frequencies in the programmable channels of the Highway Patrol Bank which will permit continual scanning of the old and new frequencies.

The company name is Racing Electronics...

I seemed to have lost their catalog, but can find their adds in racing
magazines and newspapers. They have all kinds of headsets. They have 2
a
cheap one that works, or a more expensive version that works in
comfort.
And if you and someone else wants to listen to the same scanner and
talk, for over 100.00 they have a dual headset with intercom.

goodluck, and i do not recomend being cheap here, a headset will hurt
your head if it is not comfy.

****
Stephen_h@feldstein.com crimescene@technologist.com

I bought a very inexpensive headset sold by Racing Electronics for
under $30 at the Devilbiss 400. It's the RaceTRAC RT-40, very good
sound with seperate volume controls on each ear muff. Great investment!

Funny, my old cell phone, which was in the past connected to Bell
Atlantic, will not dial 911 ar anything else any more. Perhaps this
only applies to the newer authenticated phones?

"John Griffin" <jpgriff@worldnet.att.net> wrote:

Have you ever heard the term "police descretion"? There are very few
department policies and laws that MANDATE an arrest. Once in a while
better things can be accomplished by NOT writing a ticket or not making
an arrest.

My $.02

In this situation, you should have explained the circumstances and offered to pay a restocking charge. It is not AES' fault that you are indecisive.Why should they take a loss on the time, effort, bookkeeping and freight? The time to change your mind came before the product was shipped, not after. It is vindictive and petty to air this beef in this fashion, considering A: the policy was stated and published beforehand. B: as a longstanding customer you knew the policy. C: You admit that the return was not for any good reason other than that you "changed your mind". Your experience strengthens my faith in AES----now I know that they stand behind their written policies.

>It's a cheap shell game that buyers with an attitiude impose on
>the rest of the world....a game of insurance that artificially and
>needlessly raises prices.

More baloney. Places like K-Mart and Future Shop are among the lowest
priced places in town, and have some of the best return policies.
Cheaters are part of the cost of doing business, yes, but it's cheaper
to spread that small percentage cost out than it is to chase off
honest customers with an unrealistic return policy. The fact is that
AES has a flakey attitude, and they lose a lot of business that way.
In the meantime, their prices are not much lower than HRO, if any.

>Money back guarantees are a delusion and an illusion, designed

>a doubt, give you superior quality products at fair prices if only
>they could know you weren't going to come traipsing back the next
>morning, whining and sniveling because you changed your mind.

Garbage. The best places are the ones that keep their customers
happy, no matter what it takes, within reason. Rat Shack didn't get
to be so big by chasing off potential customers.

>But they DO expect you back in, so the price is elevated in advance.
>Which porks the rest of us, especially those of us who cherish our
>hard earned dollars and who will not buy something until we know
>dern good and well it is what we want.

Good. Buy everything from places which have a No Return Policy. I'm
sure you'll save enough to eat about half the price of the first
defective product you buy from such a place.

>I do make clear exception to shoddy, inferior, or defective merchandise,
>which certainly should have some sort of return policy. If limited to
>that sort of thing, then the middle men will never buy from the sleaze.

And who determines what's shoddy? You, or the store?

>pleasurable and rewarding pursuit into the next century.

Irrelevant.

>The bottom line is that Radio Shack's "satisfaction/money back" policy
>costs ALL OF US a lot more money over the long haul, so they can

I'd like to see you prove that.

>pay back the minority who won't be satisfied. I prefer to take my chances
>by educating myself to a product BEFORE I buy....and at that point, all I
>want is a low price and an assurance that it is not defective.

You're just like everyone else. You want high quality, low price. In
a "free market" you'd get exactly what you pay for, no more, no less.
Since the market isn't exactly free, you're going to have to do like
all the rest of us; buy where you get satisfaction, and gripe like
hell about the places where you don't get satisfaction. Just like the
guy did who started this thread.

Not sure how familar you are with your local police procedures, but I know a enough about how they work here. If an officer makes a traffic stop and during the traffic stop the officer finds a small ammount of narcotics, depending on the ammount the officer has two choices. (1) run the kid in and face many hours of paperwork + later court dates or (2) throw the stuff away and call Dad to come get him. In most instances what would be considered for "personal use" is hardly enough to prosecute for. It has gotten to the point where unless the kid was hauling a couple hundred pounds of the stuff, then its not worth the time to bother with it. I am not saying that police departments wont arrest you for a small ammount of narcotics, but I am saying they do have the descretion of just getting rid of a small personal use ammount.

> Steve S

Ask your friend if he or anyone has opened the radio and made any mods. If so undo the mods then check for transmit. It sounds like he might have made the extended rx mod then found out about the software mod from someone and made that mod.
Now he is stuck.

There is a software mod that lets the ft50rd do everything, you name it. No one should ever take the case off the ft50rd it is not necessary. The software mod will do it all.

I hope your friend made a backup of his original template file in case none of this works. If you require more info e-mail me direct.

Leroy

I wouldn't be surprised if they got the buy back money from the U.S.
government. Here, buy their guns, but then don't turn communist. Then when
the U.S. sees that government won't take advantage,
HCI will get people to vote for us to TAKE U.S guns. Then we can both turn
commi together!!! Everyone will be happy!!

I don't know if it's the same thing but here in LA the FCC has approved car telephones on 217-219 MHz marine channels. They use regular FM radios and can be monitored with almost any scanner.

This is being used just like SMRS but without trunking.

Maybe they are using modified amateur radios for mobiles?

And on top of a return policy, how is a customer supposed to evaluate a product if he buys it mail order?? What if the product is just a poorly designed piece of junk? Its not "defective", its just junk. Whats the course of action to be taken? Of course, it goes back, but for a "supplier" to say "sorry, we just sell it, we dont guarantee it works for its intended purpose" is very poor business. Thats the risk mail order suppliers must take if they wish to do business. Now, if they want to set up stores all over the country, and demo every piece of equipment they sell before a sale, and someone buys it, then maybe they have an argument for not taking something back because the custome just does not want it. Otherwise, I believe they have to take that small risk to be reputable. Most mail order merchandise does not get returned. You are talking about a very small percentage comming back anyway, and for a company the size of AES, it should be a total drop in the bucket, especially if they add the expense to their products, which, if they are good business men, they will do, correct?

There are a ton of them around, most are not very good, some are just plain bogus. Try the newsgroup alt.radio.pirate for a lot of web sites and vendors.

The back of the electronics magazines have a lot of ads for these, too.

IMHO, a good decent wireless mic should have the following:

Microphone preamp

AVC/ALC circuit to keep from overmodulating

Preemphasis to keep it from sounding muffled.

Stable RF VCO

RF output stage to isolate the osc from the ant.

Battery lifetime is inversely proportional to the power output, so some compromise has to be made there.

Here in Michigan, both Ameritech and Air Touch are offering some attractive incentives to get customers to switch. You see, it's in their best interest. Once things go digital, privacy will become more of a reality (although not 100%). And cloning will be almost impossible. So the cellular providers can start making money from the users who were abusers.

The metal of the vehicle body acts as a ground plane. For even
coverage, best place is in centre. If your antenna is on the left,
you'll get better reception from signals coming from the right, and
vice versa.

Had he just refused the package would have been the answer. The
issue then would have been: did you order this?

he could then say: "NO"....

returned, unopened and undelivered.

this way the charge then could be taken
off the card...

unauthorized charge without you knowing what it was for
or who did it? bank will take care of it...remember
there are state laws which apply and bank laws which
apply as for merchandise that is not delivered or signed
for.

414. Cell on TrunkTracker?? YES YES YES

Newsgroup: rec.radio.scanner

While in search mode on my TrunkTrucker Uniden BC235XLT I was amazed to hear CLEAR cell conversations on the 812.00 thru 823.955 area of the unblocked 800 band. I obviously refrained from listening to these areas since it's illegal to listen to these conversations. I'm only posting this so those of you who lock up on these frequencies don't inadvertently listen to this area of the 800Mhz band and break the law. If any others have other cell "secrets" that can be shared, please post them. I don't want to be a lawbreaker and listen to unathorized areas of the BROADCAST spectrum.

Close. 7 in the 462.XXXX range and 7 in the 467.XXXX range.

> If you do you loose.

But are you inferring that AES stuck it to that dude? How did they?
He tried to slip it to them. The merchandise wasn't defective or
inferior. He did place the order in sane and sound mind. It was
a done deal until he wanted to return it, and they said, "No."

No sticking it to anyone that I can see.

<shrug>

The dude is all frosted over now, sure. And he may never do business
with AES again.....but from the looks of things, AES would never make
a dime's profit what with him returning things just because he finds
something different or better...........

Shoooooey, it's tough to have customers like that. Just one can eat
up the profits from a half-dozen other sales.

I think the moral of it all is that Mail Order is not the medium
by which to be a "looky lou". The costs of shipping and handling
are enormous. Add to that the costs of invoicing and restocking.

Just ONE of those kinds of deals certainly can negate the profits
from several other sales.......UNLESS, of course, prices are jacked
up for everyone else........

Ungood.

The difference is that one party wants government to grow a little bit
slower than does the other. Bob Dole admitted this when he explained
the difference between himself and Bill Clinton in a debate. It was
seemingly (my memory is not clear) 20% versus 16%.

TalkAbout + is great. My sons age 8 and 12 use them all the time. We have used them at the shore, at amusement parks, around the neighbor hood, and we will be using them skiing this winter. The range is very good. Motorola has several accessories for the radios.

I got the speaker mics which come in handy and the waterproof case. I couldn't be happier with the radios. All of my sons friends are looking forward to getting their own.

from thoughtfully posted:

> Does anyone know if there are any commonly used frequencies for movie
> production crews? There is a crew working a short distance from me and
> I would like to "tune in"

`Cordn to my old book, the "movie crew" channels are:

152.87 to 153.020, 30KHz spacing

173.225 to 173.375, 50KHz spacing

They might also be using some of the itinerant "dot" channels.

Oh, hey, look here:

ftp://oak.oakland.edu/pub/hamradio/docs/misc/scanner.faf

Look at the antennas on the radios to get an idea of what band
they are on. Also scan the wireless mic frequencies.

Yer dern tootin'! So in a very real sense, the big guys
exert an artificial control over the market. That's all
fine and dandy so long as the market is active and hot,
and so long as people *think* they are happy.

> The "big guys" know that only a small percentage of their sales end up as

You mean like Radio Schloque? :-) The hell of it is....after a while,
it's not a "small percentage". Take a closer look at the customer
service sections of large department stores...a lot of people and a
lot of space are dedicated to handling returns......returns of merchandise
that's perfectly okay.....

> They also
> have a lower overhead (true, at the cost of reduced help and support), so
> they can still often offer a lower cost to the consumer. (although many

> guy can't - a much larger selection.

But the quality, man....the quality suffers. Do you buy your
computers, stereo, and photographic equipment from Radio Schloque,
or even Rears & Sawbuck? <Glurk!>

I don't believe that to be cosmic truth. Agreed that the majority do.
Apparently AES is drawing some lines now......

> You're certainly not in it for "being nice", are you?

Nooooo.....but I am in it for the love of radio.

> Of course it's tough to compete against the "big guys". But

> hardware/lumber, pet supplies, etc.

Yup. And that's the "end of a hundred year waltz", too. Overall,
it's okay, I suppose. But at least on a spot basis, there is some
nasty stink pervading the arena. Radio, for instance, is on a
monstrous downturn. There are lots of reasons, but regardless of
the reasons, dealers and consumers alike are having to tighten their
belts. The glory days of radio are gone.

> Is ham radio next? I dunno.

Not only ham....but also CB, SWL, scanning, broadcast, and commercial.
The Land Mobile industry is a hurting frog. Cellular and PCS porked
the hell out of LM. Landline, fiber, satellite and the Internet have
slipped the hurts to broadcast in a big way. And the spinoffs have
impacted CB, SWL, ham, and scanning. Cellular and PCS are on a rising
star, but thanks to our illustrious lawmakers, those services are not
RADIO....they're portable wirelines. <my sweet patooty!>

> Many old time stores are gone (ie: Gilfer). The

> created before the last ham operator dies of old age.

Ha ha ha..... well, we have a new Fry's Electronics here in San Diego
that sells everything that carries electrons, including CB and ham stuff.
They're really big in computers, though.

> a few cents.

Pennywise and pound foolish to some extent. I worked at a Radio Schloque
store some years ago....part time for a manager friend. I was apalled at
the waste. It's profound! And clearly it results in much higher costs.

> > The bottom line is that Radio Shack's "satisfaction/money back" policy

> > pay back the minority who won't be satisfied. I prefer to take my chances
> > by educating myself to a product BEFORE I buy....and at that point, all I
> > want is a low price and an assurance that it is not defective.
>
> What's worse of course is Radio Shack's inept sales drone force.

Gawd....don't get me started on that one. All I can say is that I
bailed as fast as I could scoot when my manager buddy got transferred,
and never looked back......except for their scanners, some of 'em anyway.

GRE-Japan produces the best scanner hardware around and the best
documented. It just so happens that Radio Schloque is their sole
outlet in the USA, so for that reason, I'll still cross their doorstep
once in a while. Staying in there very long gives me the hives, though.

Anyway.....as far as radio is concerned, the times are a changing, and
in the words of Ed Bruce, this is "the end of a hundred year waltz...".
A lot depends on who sticks around on both sides of the fence, supply
and demand. Maybe there will be some hope when the inept; the nitwits;
the fast-buck artists; and the power-mongers are gone.

We'll see.

Nice sharing thoughts with you without being called a vile name... :-)

423. Re: Editorial On H.R.2369

Newsgroup: rec.radio.scanner
Date: 1997-10-04 00:00:00 UTC
From: tug@pobox.com_no.spam
Message-ID: <614p86$2rd$1@eskinews.eskimo.com>
Source record: 184112

Here's my editorial opinion on the pending federal legislation, which
will appear somewhere in the November issue of a Seattle-area magazine.

BEGIN EDITORIAL ============

LEGISLATION ALARMS RADIO USERS by Bruce Miller, copyright 1997
http://www.eskimo.com/~brucem
Permission to distribute without charge granted provided it remains
intact with attribution.

Just as radios and computers are coming together, Congress has
embarked on a campaign to restrict what U.S. citizens can listen to. It may not be quite as bad--yet--as what happened Sept. 23, 1939, when German Jews were forbidden to own shortwave radios. But many scanner users have become extremely alarmed by proposed federal legislation.
The House Telecommunications, Trade, and Consumer Protection
Subcommittee (of the House Commerce Committee) introduced two bills. HR 1964, the "Communications Privacy and Consumer Empowerment Act," introduced by Edward Markey, and HR 2369, the "Wireless Privacy Enhancement Act," introduced by Billy Tauzin, would outlaw the manufacture, sale, or modification of scanners capable of receiving Commercial Mobile Radio Service (CMRS) frequencies. CMRS is the new Federal Communications Commission (FCC) designation for radio services that function as wireless telephone services. (Remember when Newt Gingrich and associates got caught with their pants down during a conference call by someone listening in on the cellular phone link into the conference?)
These frequencies are all over the radio spectrum.
Further, allocations are changed by the FCC. What may be a CMRS channel in one locale may not be so in another area. The restrictions in the proposed legislation go far beyond banning the listening of cellular phone communications (which is already illegal under ECPA--the Electronic Communications Privacy Act of 1986.) HR 1964 and HR 2369 also would make it illegal to listen to such communications as the NASCAR communications at races, some marine communication (including emergency), and some public safety agency communication (because some public safety agencies use commercial
bands). Manufacturing a radio that blocks out all of the forbidden
frequencies could become so difficult that some manufacturers might
simply abandon production or greatly increase the price of radios.
The proposed legislation is not likely to deter the few miscreants with radio scanners who probably do not care about laws anyway. The proposed legislation would,
however, turn many of the following people into criminals: volunteer firefighters; volunteer
emergency workers; ham radio operators; community crime prevention groups; store owners (who sometimes have scanners going in stores to deter criminals); search and rescue workers; members of the media, such as those who work in newspaper newsrooms; and Mr. and Mrs. Average Citizen who want to know what's going on in their neighborhood--and who become more eyes on the lookout for criminals. (This author directed police to a person stalking another person on a bus, to a stolen car within half an hour of it being stolen, and to a

group of drinking minors before they crashed and burned--all because the information was physically and legally available.) Why would these people become criminals? Simply because the proposed legislation makes it illegal to even listen to certain frequencies. The Communications Act of 1934 made it illegal to listen and divulge the contents of certain communications on most
frequencies.
The next time you think about taking a hike on a mountain, or
contemplate what you would do in a sinking boat, or prepare for an impending earthquake, would you want people monitoring a variety of frequencies for emergency communication? Or would you rather they sit at home legally unable to make that important link to save your life or the life of a loved one?
Via two separate letters, I asked the following Washington State members of Congress what their positions were on these bills: Representatives Norm Dicks, Jennifer Dunn, Jim McDermott, Adam Smith, and Rick White; and Senators Slade Gorton and Patty Murray. Slade Gorton's office responded by saying he didn't have an opinion. The others did not respond. (Interestingly, Rick White is on the Telecommunications Subcommittee in which these bills originated.) You can find a full list of committee members at
http://www.house.gov/commerce/telecom/members.htm.

Charlie,

I'll post a 'So Far' list of talk groups that I think I've identified in
the near future. I haven't had much time lately and I've been having
antenna problems, so I'll try and post what I've gotten, soon.

Here's the frequencies I use + some notes of interest:

852.3375 (I suspect for data use only, possibly no voice)
852.8875 (I suspect for data use only, possibly no voice)
853.7625
853.7875
854.2625
855.1875
855.3625 (Phone Patches)
855.4125
855.6125 (Phone Patches)
855.6375
856.2875-860.2875 (Control/Voice)

425. Question: F, N, or UHF connnector for 9913 Cable?

Newsgroup: rec.radio.scanner
Date: 1997-10-04 00:00:00 UTC
From: along@erols.com
Message-ID: <along-ya02408000R0410970339360001@news.erols.com>
Source record: 184114

I've just recently ordered and received a 75' length of 9913 cable to run a connection between an outside antenna and my basement monitoring station, to use with the new BC-895 TrunkTracker. I want to monitor 33-950 MHz (concentrating on 851-868MHz). I ordered the cable w/ UHF connectors on each end. Since ordering this, I've noticed some small print regarding frequency next to the various connectors displayed in the many mail order scanner catalogues available.

My concern here is: Are these various connectors frequency specific? Should I have opted for the N or F connector instead of the UHF connector?

I purchased this 9913 cable because of its low attenuation feature with the UHF connectors on it, because I had a bunch of SO-239 to BNC connectors laying around, that I figured I could use. Now I'm a little nervous that I bought the right cable, but the incorrect connector!

BTW, does anyone have any suggestions on how to get this monster cable into the house, w/o any drilling holes, etc.?

T.I.A.

Andy

: meant that the only place that can repair the products that they sell would be
: them (RS). It seems to me that they might be in violation of anti-trust laws
: with that one? Whata ya think?
:
: Bill

There is no law that requires a company to help a competitor repair or service their product. If a competitor can work out their own schematics and testing procedures, then they are free to do whatever repairs for which their techs are licensed to perform. Anti-trust has nothing to do with it.

: > and attach it to your telephone line at the pole (off of your property)
: > and listen to your private telephone conversations? No there are
: > laws against that. Well then why can't I take my inductive pickup and,
: > without actually touching any wires, listen into your private telephone
: > conversation? Same law applies. Well then why shouldn't there be laws
: > against you listening to my cordless phone or cellular phone. The
: > ONLY difference is that one uses a wire and one does not.

Wrong. There is another difference, which you chose to ignore. Your radio signal is entering MY property. Making it illegal for me to listen is the same as for you to take a bullhorn and yell your messages to your neighbor across the street - and make it illegal for me to listen to your blathering. In both cases, your conversation is entering my property - by YOUR choice, not mine. If you want to keep it private, then use a landline - not a wireless phone.

: > A knife is a "passive device" but there are laws limiting its use.
: > Hammers, saws, tree limbs, rocks are all passive devices but you
: > can't use them to bring harm to others.
: >
: > -The fact that the law does intrude into your bedroom...
: >
: > But when you listen to the private conversion between a man and
: > his wife you might as well be intruding into their bedroom.

No. It is like you and your wife placing your bed out on your front lawn, and then expecting/requiring people to not observe what you do when in the bed.

: > This sounds like typical liberal/libertarian trash. Ideas that
: > say that I should be able to do whatever I want when I want so
: > long as I'm not hurting anyone else. Well listening in on someone's
: > private conversations is "hurting" them. It violates their RIGHTS

: > to privacy.

How? YOU chose to broadcast your conversations, not matter how inane
they may be. YOU chose to make it possible to be overheard. If you want
privacy, then use readily available methods for keeping your conversations
private.

: > "Laws are designed to be a guide to a civilized society but they
: > will not prevent certain people from acting in an uncivilized
: > manor." -- Clarance Thomas

And maybe a civilized person would attempt to keep their private
conversations private - instead of spewing them out on to the world?

: > I realize that we can't really legeslate morality. Tell me what
: > is moral about listening into someone's private conversation, legal
: > or not.

What is immoral about it? If you want privacy, then take the modicum
of effort required to ensure that privacy - instead of making love to
your wife on the front lawn.

: The laws I'm worried about are the ones that will say that we can't even
: listen to PUBLIC service frequencies. I agree that we should have access to
: what others believe are private conversations. However there are enough
: radios out there that get the cellular and cordless bands that in order for
: people to have complete privacy the phone companys will need to introduce
: some form of encryption because I highly doubt that some of the people with
: the radios that are cellular are going to turn them in to have them fixed
: and the burden should be placed on the phone companys. Now I'll play devils
: advocate and say that you might compare cellular phones to postcards. You
: wouldn't write intimate letters on a postcard. I know it's against the law
: to read someones mail but are you 100% sure that someone isn't reading your
: postcards?

Cellular phone is rapidly being converted to digital - which will make all
the current scanners useless. It is possible that the FCC will not allow
digital capable scanners to be produced.

As soon as the conversion to digital is completed, then encryption will be
trivial.

: If you want to have a private conversation then use a landline. As you will
: never have privacy on a cellular unless they start encrypting the signal.I
: just hope that our hobby and freedoms will survive.

Exactly.

Yes, Uniden will fix the radio for a flat rate of $49 total. There are no other charges. Check out their web page for the details. As to the one mod for 800 cellular (which is a simple cut of one component), their repair page says they bring the receiver back to original specifications. It doesn't matter either way.

Since many years I own a Bearcat 175 XL, the europian model.
Since some time i want to use the scanner for pocsag and other pager
programms.
However, this model has only 16 channels, somewhere, somehow, someday
i have read something about increasing the channels to 20. (don't now
where anymore, kind off stupid....)

Does somebody know where these mods are found? ftp or http?
Maybe there are more interestings mods around?
Please let me know......

Don't waste your hard earned bucks scrambling to buy Cellular capable scanners. Here in Michigan, and I'm sure elsewhere, Cellular providers are quickly switching users over to digital cellular phone service. None of the cellular capable scanners discussed in this newsgroup will be able to monitor these digital cell phones, legal, or otherwise, once they are in place.

Bill Crocker

It seems to me that it is only recently that we have a Republican congress.
I believe, except for the modified Brady bill, these other bills were
passed into law while the democrats were running the show in congress.
Am I wrong on this?

Can someone with the measurements get this fellow a thicker skin?

Look, Bill, I'm not trying to nasty but I will be blunt.

I disagree totally with your absurd argument that less service is more and
that a commitment to customer satisfaction is the mark of crook. I think
you haven't a clue how to run a business.

The honest businessman is one who values his integrity and his reputation
and is committed to his customers and to delivering the best products and
service he can even if <gasp!> sometimes that's at the expense of the
almighty dollar.

I speak from some experience. For the past 10 years, I've run a business
myself selling a packaged software product. It comes with an unconditional
satisfaction guarantee, unlimited support and free updates. I have
customers who've been with me 10 years still getting free updates. If
someone calls to report a bug, I fix it. I don't care how long they've had
it, whether it's 10 minutes, 10 days, 10 months or 10 years. If they find
a bug, I fix it. If someone buys the product and they don't like it, they
get their money back. I don't even require that they tell me why they
don't want it, though I do appreciate the feedback if they are willing to
tell me. This is how I do business.

And guess what? It works. Once you get into the habit of operating in
this manner, the problems go away. My return rate is under 0.1% compared
to an industry standard of about 10%, according to some resellers I work
with. How do I do it? Simple. I try to fully and fairly disclose to each
potential customer what he should expect. If the customer has a question,

I actually answer it. And unlike a lot of vendors, I actually listen to my customers and give correct, reliable information. Anytime a customer does encounter a problem, I ask myself what I could do differently the next time in the way I've explained it, or in the documentation or in the product itself so that no one else will have a similarly disappointing experience.

I welcome returns, bug reports, suggestions, complaints because I know that when I have a customer who complains, that is a valuable person. He is telling me something I need to know. For every customer who does complain or return a product, I know there are probably 10 more who felt the same way but just didn't figure it was worth telling me - probably because of their experiences with other vendors who just told them to go to hell.

A lot of people seem to think life is all a big zero-sum game. The only way to get something is to take it away from someone else. If a vendor gives a customer service, it must be at your expense and, damn it!, why should you have to pay for that?

Sir, that philosophy is obnoxious to me. Life is not a zero-sum game. You are supposed to add something to the world while you're here. You are supposed to leave it a little better than you found it.

When a vendor offers an unconditional satisfaction guarantee, yes, I suppose in some twisted sense that's bad for you if you never return anything because he has spread the cost of any returns in the prices he charges, meaning you are going to pay for that. He also has to spread the cost of his salesmen's time spent on people who do not buy, the cost of ads that don't get read, the cost of products he develops or stocks that, for whatever reason, just don't sell. By this logic, you should probably only buy things from the back of a white van.

But, maybe, just maybe, sir, the vendor who's committed to your satisfaction can deliver that. Now, isn't that worth something?

But also, isn't it just possible that his dedication to his customers might allow him to improve his product or service so that more people buy from him, allowing him to increase his efficiencies and reduce his costs? In fact, isn't that just what does happen? Isn't your diatribe about Sears and Radio Shack, etc., just one big, long testament to the fact that satisfaction guarantees lead to increased volume and better prices that drive out the competition from vendors less committed to the customer?

In my own case, my product is not the cheapest possible thing in its category. Heck, you can even find free stuff on the internet that does a lot of what my product does. But it's my experience that long after I've completely forgotten what I paid for something, I'm still acutely aware of whether I got what I wanted. That's what I hold out to my customers. And it does work.

The crook is not the vendor who promises that you must be satisfied or you get your money back. That's an honest man. That's the smart businessman, the one who knows that the only way to succeed is to make people happy so they'll come back and bring their friends. The honest businessman, the

smart businessman, has his eye on the long-term.

The crook is the guy who says, we got your money, you got the box, don't call us again. That's the guy in Times Square trying to sell you a "genuine Rolex" from under his coat for $100.

You want to deal with crooks, be my guest.

The first major advance in scanning since the introduction of
the computer controlled scanner. Listening Post integrates your
scanner/sound card/computer into one seamless system. Check out
http://www.lpcom.com for full information.

There is also a FREE speech inverter system available at the
above location. This is offered as a demonstration of our
technology. Not to be used for any illegal purposes.

Design Goals

- Windows 95/32-bit system with full multitasking.
No more do you have to stop scanning to edit banks,
channels, etc. Generate reports, search the database,
all without missing any of the action.

- Tight integration with database. Listening Post utilizes
ODBC to connect directly to Access or Sybase SQL Anywhere
to store channel/search information. This ability enhances
the scanning experience so dramatically it was reason
enough for us to develop this system.

- Built in wave recording. Sound data is stored directly to
the database to allow full random access playback. One
can playback just the activity from a given agency, etc.
There is even an 'Instant Replay' button.

- Full featured scheduler. The ability to run autonomously
and unattended is one of the major value-adds that computers
bring to scanning. Our scheduler is both passive (time-
based) and reactive (triggered), and is second to none
in scanning control software.

- Full duplex support. Playback can occur simultaneously
with recording.

- Scanning speed is limited by the radio, not the software.
Scanning speeds of up to 80 channels/sec are possible,
even on a heavily loaded PC. No software that runs in
a dos window, or that does not have driver support can
make this claim.

- Familiar user interface. Listening Post resembles Windows
Explorer in both the main interface and the playback system.

- Full featured scanning support. CTCSS filtering, priority scans, per channel delays, etc. are supported.

- Audio processing plug-in support. Listening Post supports plug-in components that will process the audio to achieve some desired result. Included in the full version is a speech inverter component. More will be available as they are developed. With release 1.1, the plug-in specifications will be published on the web page, allowing any interested parties to develop their own plug-ins.

- Radio dependencies are external to the core system. This will allow us to add support for additional radios quickly.

- Extensive on-line help.

If you get earphones, use the over-the-ear style, which covers your whole ear. There is a company that makes headsets just for racing, but I do not have their name. I like your idea of an earpiece and over-the-ear hearing protectors (like you would use when using a jackhammer). My experience at car races is that just a regular earphone doesn't work, nor do those walkman-style headsets. You need a true, over the ear headphone.

It's a sadder state of euphorious affairs in the USA that in
order to get a company to accept merchandise back, one would
have to deny ordering it to the deliveryman.

It's sadder still that the people who take the order don't
make you realize that once you place your order and
accept it you have bought it and no returns are allowed.

IF a company can ask you for your Zip Code when you place an
order using a credit card, they surely can state: we don't
accept returns.

But credit card orders are protected for merchandise unwanted
or ordered in the heat of sexual union when you did not know
what you were doing...

Credit Card Banks says one ting....sellers who subscribe to the
polices of the BANKS who use Visa/MC/AE/Discover etc. are bound
by those agreements when they agree to do credit card sales.

That is their responsibility: be bound by the rules of the game
using that terminal for that charge. Banks say you can return
items unwanted or unordered or "in the throes of passion" based
on the parameters they set up.

The store cannot unilaterally abridge that acceptance: it's
called their contract.

Notify the Visa or MC or whoever what they refused to do.

Hi William

He did not open the box.

He is not a lookie-lou or lookie-louette

Reasons he decided to send it back are non-seguiturs here.

It is not part of the equation.

It does not compute.

He wanted to return it. That's it. The receiving
dock knows not why. It's purpose is to stamp on the
box whatever numbers indicating returned and alive.

They take the unopened box. Take the inner box out and
restock it.

MR. Cheek: he (the buyer) did not (nada) open the
outer box (shipping carton) from which to inspect it (
lookie-lou or lookie-louette)..... he did not consume
the marriage and is entitled to an annulment.

Repeat after me: HE
DID
NOT
OPEN
the shipping box.

LMPS -- Motorola's Land Mobile Products Sector today announced a $38 million, 10-year contract to provide the city of San Francisco a state of-the-art digital 800 MHz trunked radio communications system as part of the city's overall upgrade to a new 9-1-1 emergency communications system. The contract also call for additional purchases of up to $1 million a year for 10 years. The new Motorola ASTRO SMARTNET II system will consolidate the city's nine existing radio communications systems into one new system. Motorola will design and manufacture the new mixed mode analog and digital radio system, providing the software and hardware components for a new communications infrastructure and 1,000 mobile radios and 3,000 portable radios. /PRNewswire/

Nope, but then neither does the Oregon Scientific unit which costs
twice as much ($80 at Service Merchandise) to two and a half times as
much ($100 at Sharper Image stores).

BTW, I sent e-mail to Oregon Scientific asking if they had a model
with 24 hour display in GMT, which seems like it'd be a popular
option. They said that they didn't offer this as yet, but were
considering it.

472. Free touch tone decoder

Newsgroup: rec.radio.scanner
Date: 1997-10-04 00:00:00 UTC
From: motorola2@aol.com
Message-ID: <19971004012601.VAA02645@ladder01.news.aol.com>
Source record: 184193

For those of you who want a touch tone decoder but don't have one, here is a method of using your pocket pager to decode a touch tone. I learned this trick working in law enforcement and it works.

Use a tape recorder to record the speaker output of your scanner. When you hear a touch tone, dial your pocket pager number, and replay the tape recorder into the telephone handset. When your pocket pager starts beeping, you will see the number on the pager display.

If you have trouble with this, try adjusting the volume of the tape recorder, it may be too loud or not loud enough. The pager is a little picky. It is best to buy a Radio Shack attenuating patch cord, the one with the red plugs on both ends. Plug the attenuating patch cord into the scanner's headphone jack, and the other end into the external microphone jack of the tape recorder. Adjust the scanner volume control for a mellow volume. It helps to put a jumper wire across the scanner headphone jack so you can hear the scanner speaker while the patch cord is plugged in. I would be interested in hearing success stories on this. It works well to find out who a cordless telephone is dialing. It also works if you are recording your home telephone line, you can play it back to ascertain who your target has called.

473. Re: Is there a demand for the Regency HX2000 with 800-950 Mhz?

Depends on who wants to buy it...the good thing is that it does receive 800, unrestricted. Secondly, the manual tells you how, which may be nostalgia in a few more years. Hang onto it, keep it clean. Clean used gear that is uncensored usually commands a decent dollar amount.

Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.scanner

To: Jack Kauker (This is in response to your e-mail, the
subject of which is a vital interest to
everyone in radio....hence my reply here)

You don't KNOW how well I understand BOTH sides of the fence.
But I know them both like the back of my hand. I've been in the
business as a "little guy" trying to compete with the "big guys"
for over 20 years.

Being perfectly frank about it, I can't afford to let people shop
and handle my goods and then return them on a whim or because
they changed their minds, or because they found something
better.....or even because their dying grandmother told them to
return it......

As a consumer, I understand your point of view. As a businessman,
I understand that if I let you soak me for X amount of dollars, then I
have to charge the rest of my market for the soak. Now THAT is
blatantly unfair. I should be loyal to my existing market by
offering quality merchandise, good tech support, and fair prices.

Return policies were invented by the BIG GUYS who have no ethics,
and who don't give a hang about spreading the losses around to
all their customers. You call THAT "customer loyalty"?

You have become accustomed to the Radio Shack's, the Sears,
the Wards, the whomevers in this world who add to and foster the
delusion of being good guys with their liberal satisfaction/
money back guarantees. But that is not the mark of a good guy.

It is the mark of a con artist.....a gambling casino operator....who
simply finds a nice equation for profit and loss....and spreads the
loss around his customer base.

Gambling casinoes do not lose. They can't lose. They don't
gamble. They play and structure the games so that the pay odds
are less than the mathematical/probability odds. They pocket
the difference between those odds....with an absolute certainty
over the long haul. And who pays the winners? Not the casino.
Try....the losers. A loser loses $100. A winner wins $85. The
casino pockets the $15 for its time and trouble.

And so too it is with the radio and most other businesses. There
is a flow of cash between supply and demand....with lots of little
rake-offs along the way. A business is not going to go belly up
if it can help it, so if it has to take it in the shorts by people who

increase their costs, then those costs are going to be added to the prices of the products....or product quality will be lowered!

It's a cheap shell game that buyers with an attitiude impose on the rest of the world....a game of insurance that artificially and needlessly raises prices.

Regardless of what AES told you or didn't tell you, you STILL bear exactly one half the responsibility of the transaction. You should have KNOWN what product you wanted, and if you didn't know, you shouldn't have made the purchase until you did know.

Money back guarantees are a delusion and an illusion, designed to inebriate the masses and to addict them to a narcotic modus operandi. In effect, this hurts the good guys who would without a doubt, give you superior quality products at fair prices if only they could know you weren't going to come traipsing back the next morning, whining and sniveling because you changed your mind.

But they DO expect you back in, so the price is elevated in advance. Which porks the rest of us, especially those of us who cherish our hard earned dollars and who will not buy something until we know dern good and well it is what we want.

I do make clear exception to shoddy, inferior, or defective merchandise, which certainly should have some sort of return policy. If limited to that sort of thing, then the middle men will never buy from the sleaze.

Like I said....I understand your views. However, the RADIO MARKET is crumbling all around us, in every which way you turn, from CB to ham to SWL to scanning to commercial and broadcast. The companies and entrepreneurs who are to survive into the future of radio, for whatever it may hold in store, are going to tighten their belts.......

.......and yours, too, whether you like it or not. But then a truly free market does not play silly little under-the-table games with money-back policies for when you stub your toe or change your mind. CAVEAT EMPTOR is the first commandment of a truly free market.....and it doesn't get any better than that. It does get worse, though......

Despite the name, I strongly urge you and the rest of "radioland" to purge the "*Radio* Shack customer mindset" from your heads and become informed, educated buyers. This bullshit of "You got the questions; we got the answers..." has got to come to an end if radio is to survive as a pleasurable and rewarding pursuit into the next century.

The bottom line is that Radio Shack's "satisfaction/money back" policy costs ALL OF US a lot more money over the long haul, so they can pay back the minority who won't be satisfied. I prefer to take my chances by educating myself to a product BEFORE I buy....and at that point, all I want is a low price and an assurance that it is not defective.

IMHO.

I'm confused, you say don't vote demi. Don't vote republican. Who then, do we vote for. Because, for all i know we're sitting here whining and moaning, and all of a sudden Clinton gets re-elected with the lowest voting percentage in history. What do we do? we have three parties, do we add libertarian? Who wins if there are four parties? You said "amen brother," so who do you suggest run this country, out of couriosity? Please help.

477. City of Atlanta's Motorola 800 System goes down hard today

Newsgroup: rec.radio.scanner
Date: 1997-10-04 00:00:00 UTC
From: ccreeper@inetnow.net
Message-ID: <3439a3b1.164686695@news.access1.net>
Source record: 184198
Cross-posted to: rec.radio.scanner,alt.radio.scanner

10/03/97
Just for historical record, today the City of Atlanta's 2 year-old
Motorola 800mhz Smartzone trunk system went down like a rock starting
at around 12 noon till about 5 pm. All active repeater frequencies
refused to un-key and emitted an extremely unpleasant high-pitch tone.
Shortly after that happened, the system went into cardiac arrest and
reverted to fail safe mode, which was still almost completely useless.
The same high-pitch tones were still on all frequencies in
conventional mode and communications were very garbled. Officers and
other radio users in the field found that their portable batteries
were dead very quickly because the repeaters refused to un-key; in
short, it was a mess for all. While in convetional mode, apparently
one ot Sewer Dept's talkgroups had to share the same frequency with a
Water Department talkgroup, both parties were yelling at each other to
get off their frequency and stop transmitting those high-pitched
tones!

Only the Eastside Atlanta Police zone found a solution, they switched
to a TAC frequency on neighboring Dekalb County's 800 system.
However, dispatch was almost out of radio range. I believe fire and
rescue personnel were able to be dispatched by land-line or through
repeated tries on the radio. At one point, a police supervisor
ordered the old UHF radios to be charged and brought out later in the
day. After several re-tries to bring the control channel back online,
the Motorola people finally got the system to trunk right before 5pm.
Listening to the subsequent transmissions on the radio maintenance
talkgroup, seems as though the trouble started when a failed Air
Conditioning system did not properly cool a vital backup system at
Fire Station 30, the resulting mess brought down the entire city's
communications somehow. I wondered if after *several* hours they
just decided to "jiggle the cord" after nothing else seemed to work.

Mr. E,

Remember the Whig Party?? In 1854, the Republican Party was a 3rd party - one issue, slavery, made the Republican Party a major party in less than 6 years. The Whig Party faded into obscurity.

The "stateist" stance of the modern Republican Party could very well (and very quickly) make it the modern day Whigs.

Tell me there is one dimes worth of difference between a lefty liberal Republican like John Chafey and a lefty liberal Democrat like Richard Durbin (this paring happend to be 2 Senators that believe in socialized medicine - I could site numerous other examples).

Yes ladies and gentlemen, we ARE losing our country and our Constitution. What will the FCC attempt (with Congress's help) to ban next??

Rage,

RSU stands for "Radio Shack Unlimited". This is RS's mail order division that handles oddball and limited-distribution parts that RS carries, but not in the retail stores. Look in any Radio Shack catalog - see the Stock Numbers that are in purple? Those items, along with the ones in the loose-leaf catalog you'll find on a kiosk in a Radio Shack store are RSU items.

You order and pay fr those items at the store and they either shio them to the store for pickup or, insome instances, directly to your home.

Hi Guys....

I think the problem is the fact that you have already downloaded and
installed Wintone (it may have even been the beta version = 1.5)
therefore when it checks the registry for a "registered" version it
finds an old entry and decides you are past your "30 day free trial
period" and request that you register. I am a REGISTERED user of
version 2.0 and it does do what it's supposed to. As for the problem
with getting it to work "again" so to speak. I have one suggestion,
SET THE CLOCK BACK ON YOUR MACHINE TO THE DAY YOU INSTALLED THE OLD
VERSION. Try a year, then 18 months, etc. try to re-install. My only
other suggestion is to clear the entry from the registry...BACK IT UP
FIRST!!!!!!

That's my take on it.....hope it helps someone...let me know,

Later

Mad Dog!!

Mods left
>alone.

I've sent a Pro43 and Pro39 to the RS Service Ctr in Jax; both were cell-moded and both were returned with the mod intact. The most recent was the Pro39, which I had a new keyboard put in a few weeks ago. I'm not sure it would be legal for the RS guys to mess with the scanner mods, and I signed nothing that would give them such license. Maybe I was just lucky, or maybe the rumors are merely more RS bashing.

There may be no answers.....but here and there, there is AN answer.

Take books, fer instance. You know why there is NO RETURN on
books and magazines at most dealers?

Because if there were, unscrupulous customers would take them
down to the xerox machine; copy away; and then return the
merchandise. Same with software, by the way.

Likewise for KITS, plans, instructions sets, etc. Let me give
you an example......

A VERY WELL KNOWN (and respected ??) ham radio dealer bought
a certain mod-kit from me a few years ago. And promptly returned
it, package open, but without the instruction set. Claimed the
mod wasn't what he wanted. Demanded a full refund. I said no.

He raised hell. He puffed up in pompous, self-righteous glory
and lectured me on how to treat a customer; how his radio shop
didn't treat THEIR customers THAT way. Went on and on and on.
I finally relented and agreed to give him his money back when
he returned the instruction set for the kit.

Finally, it came back....creased, dogeared, obviously used. I sent
him his money and that was that....never heard from him again, though
I see the guy on these newsgroups from time to time.....

Funny thing, though. Funny how that radio shop began to market
that particular mod that he said wasn't what they wanted. Of course
not. They just wanted to copy my instructions, schematic, and parts
list, and then make up the kits themselves. And THIS, a "respected"
radio dealer, mind you!!! One of those who have a total satisfaction
policy, no less. Shooooooooeeeeeeeey! <shaking head sadly>

Hopefully this will convey the logic behind why there are NO REFUNDS
and NO RETURNS on at least certain kinds of merchandise.

Several years ago, I encountered a spate of returned books. So
on subsequent sales, I applied a "thingamabob" to detect the high
intensity light from copy machines.

Sure enough. Guess what? The next return was clearly positive.

Ummmmm. We do not accept returns on printed matter and kits under any but a very limited set of circumstances now.

Don't wonder why. <grin>

Probably Radio Shack's telescoping center-load whip.

No reputable manufacturer is going to spec a gain
figure for a handheld application, however. There
are too many variables.

Um, I still don't think everyone's going to be dumping their old phones
for the "new and improved version". Just the fact it would be a phone
number change would be enough inconvienence to turn a lot away. We all
know people resist change. I believe most cell users don't even
consider privacy or security an issue with their phone. Most that I
know don't even realize their conversation can be intercepted. So the
added security of digital would be uninteresting to most. But only time
will tell.

And what makes those scanners "illegal"? Just because someone up in
the butthole of the United States passes a "law." There are a billion
pages of "laws" in the U.S. Code. You are probably breaking hundreds
of them right this very moment. One moment your scanner is fine, the
next it is "illegal." Stand up or become a sheep/slave.

>The one who does will be rewarded!!

I can't help you there, but I CAN tell you how to make your radio (or ANY radio) into a radio into a radio just like the ones used by the Kansas City, Missouri, fire department.

1. Lay out a white towel on the table. It should be large so that you can see small parts and so that screws, etc., will not roll away.

2. Make sure there is ample bright light.

3. Carefully open the radio, making sure you make good notes as to where all the screws go.

4. See all those little metal cans with the "screws" in them? Tighten them down really good until they "give" or you hear a snap.

5. Take a sharp Phillips head screw driver. Jab, poke and dig into just about everything.

6. Clip random wires.

7. Reassemble the radio according to the notes you have made.

Congratulations. You now have a radio which works just as well as those 800 MHz units used by the KCFD, and which cost us, the taxpayers, something like $15 million.

Bonne appetite.

No Mark, you're missing the point. You better go back to law
school and re-study contract law. The first thing to do is
learn what a contract is.

I assure you, the Federal Trade Commission rule 3-day cooling
off law (not 30-day as you mistakenly spout as gospel truth in
your verbal diarrhea) applies only to signed contracts when the
business initiates the contact, such as door-to-door and
telemarketing salesmen.

It does not apply to fools who go to a business (grocery store,
mail order firm, etc) and initiate the transaction.

You try to pull your 30 day stunt at a grocery store or car dealer
and you'll be laughed at all the way to the front door.

... You are depriving a village somewhere of an idiot.

> seeing as how no one has the answer.

Doesn't matter how long it goes. You will note this has become
a popular thread with two distinct schools of thought. It is a
vital issue in this day and age where radio is declining, not only
as a tool and communication medium, but as a hobby and leisure
interest.

Survival of anything simplifies to pretty much the laws of
supply and demand. Whenever there is an excess of either side
with respect to the other, then there is a problem. The greater
the disparity between the two, the more dangerous or even lethal
can be the ramification.

The radio market is the most visible barometer or signpost of the
radio hobby. It isn't THE single most vital thing, but it is most
visible. This public forum is a place where BOTH sides of that market
can meet to share views. Who cares how long it goes?

To my way of thinking, the hobby and the market are on the downhill
slide, but a legitimate discourse on the market side just might be
enlightening to those who really don't know and never knew the inside
story....the rest of the story, so to speak.

Many people see nothing more than the act of trapising into a goody store and trucking home with the new radio, antenna, tuner, meter, or whatever. Or calling 1-800-ORDER-NOW and getting a FedEx package a couple of days later.

But there is a lot more to it than that, especially behind the scenes. COST is a great one that the consumer never cares about unless it's to HIM. Pity. Because cost to the vendor helps set the cost to the consumer.

More's the pity when Radio Schloque's long, bony fingers can pepentrate our hobby and market with trends and traditions that do little more than elevate the cost out of the vendor's pocket.

Somebody recently observed that a large company can "bend over and take it in the shorts" because the loss is so small and insignificant. Sure they can. And as long as they are willing to do so, more and more little guys.....the backbone of the hobby market....will be forced out to find something else to do.

Still more's the pity, because the "little guys" don't just bail out, not until there's no hope. And when they do....no one misses them for a while. But look out when Radio Schloque discontinues a product line; look out when a well known entity goes down the tubes all of a sudden. Like RCMA and USSN. Like a dozen other newsletters and magazines. Like a handful of major radio shops.

When these guys are all gone and the little guys are all gone, whatcha gonna do? What if they gave a REC.RADIO.SCANNER group and no one posted? What if they gave a radio transmitter, but no one keyed the mic?

Last one out, please turn off the lights and close the door.

Otherwise, if there is to be any hope, then let a truly free market prevail. Let the buyer beware, just as the vendor has to beware. Let each contract of sale stand on its own merits. Let buyers and vendors be educated and informed. Let each be responsible only for himself. Let each have a little concern for the problems of the other.

Simple.

But there is no answer.

When you post a date in an international forum such as this,
keep this in mind:

In some places (e.g., the United States), the above date says
October 3, 1997. In other places (e.g., Great Britain), it says
March 10, 1997.

I suggest writing out the name of the month to avoid
confusion.

Mike

Then we should outlaw public places, because you can overhear a lot of "private" things being said. I know better than to say anything over a phone, cordless OR hardwired. If it's important, I say it in person. Seems like two or three times a year Dear Abby runs a column on cordless phones, and I see news stories about once a month. Encrypt it, encode it, scramble it or don't say it.

Read this month's (October Issue) of Monitoring Times. Then, as suggested, call your local television news desk or your largest area newspaper about HR 2369. Since it will become ILLEGAL for news agents to monitor right along with all of us, they will suffer a huge loss of story leads and "on the spot" reporting. I found my area news services VERY INTERESTED in this story. Explain it to them, read them some of the article focusing on them, tell them which magazine and where to find the threads on the net. Together we do stand a chance to disrupt/kill this proposal.

My only comment is that I would *not* want to pay the full price for a "brand new" item that actually was taken out of stock, shipped (with the resulting rough treatment) to someone, then have that buyer change his mind ("I didn't open it - honest"), and reship it back to AES (again, being subjected to the usual rough treatment that occures during shipping), then re-stocked. No honest business should sell that item (again) as "new", and I would not expect that business to absorb the loss of selling the item as "used."

Either the buyer pays a restocking fee (equal to the loss to the business for having to sell the item as "used"), or better, no returns should be accepted. My hat is off to AES.

Jeff

David A does not deserve an answer to this question. First of all, he is
a blatant abuser of these newsgroups, showing his lack of courtesy and
mutual respect for the other readers by continually posting his irrelevant
political verbal excrement. The second reason is that the modification
is clearly illegal since this would violate the type certification.

Hell, it might even violate his favorite Ricoh-camera laws! Or maybe
he has raised his standards and now complains about Canon and Nikon laws!
BTW, there really are Canon Laws. YCLIU.

It is so funny to see him continually demonstrate his ignorance.

> 5. Clinton supports Hillarys Communistic Health Care plan.
> The first 4 issues indicate that clinton is without a doubt, a hard
> core leftist who tries to come off as a "New Democrat"! Noone believes him.

#1. Many true "liberals" disagree with Clinton on gun control,
including me.
#2. This is a "liberal" view, which I agree with. I'm NOT
pro-abortion, just pro-CHOICE. Keep the government out of these
personal choices.
(Most anti-choice people love babies only until they're born...)
#3. This is a "liberal" view, which is in line with the Constitution
and Civil Rights.
#4. "Big government" - oh... like Reagan, Bush, and all those before
them? Government is actually smaller with Clinton. What's the problem
- size or power? We don't necessarily need a smaller government, we
need an honest, efficient government.
#5. This may be labeled a "liberal" policy, but it is fiscally
"conservative". The current health care in this system is corrupt and
bloated with fraud, waste and abuse. How can you defend it? It is the
WORST health care system in the world.

There is so much hypocracy and oppression coming from anti-liberal
people... as in deciding which oppressive laws you want to impose on
others. Deny choice in abortions, deny availability of decent efficient
health care, deny gays the rights they're entitled to, but then go
ballistic if anyone wants to limit guns.

I'm not anti-gun... I won't give mine up. But I won't deny others their
rights either.

For some reason our society has gone from taking
responsibility for one's own actions to making it
someone else's responsibility or fault. "It's
your fault that I can hear or intercept your
conversation..." Why not make it YOUR responsibility
NOT to listen or go out of your way to listen.
Buying/modifying a scanner, turning it on and tuning to
the correct frequency is intentionally eavesdropping
and has nothing whatsoever to do with overhearing
someone's conversation in a public place. You
guys really make me laugh! You say that if I don't
want you to listen then I should encode or encrypt
my conversation. Well, digital PCS does just that.
It digitally encodes and encrypts one's conversation.
Congress is having to pass laws to prevent the manufacture
and/or sale of decoders that will decode PCS phones.
People on this newsgroup are complaining that this violates
their "rights." How far does one have to go to insure
privacy? It is a real pity that Congress has to pass
laws such as this to prevent people like you and others
on this group from eavesdropping on private conversations.

Laws are but a guide for a civilized society but they
will not prevent certain people from acting in an
uncivilized manor.

If anywhere it is true on this group and in this
country in general.
"Ethics" and "morality" have become just two politically-
incorrect abstractions.

Yes, the key is PRIVATE. If I (and most other Americans)
consider my telephone conversations private, regardless
of the phone, and you do not the who is right?

Like I have asked in numerous other posts on this subject
where do ethics come into place? You may have the "right"
to listen but do you not have the moral and ethical
responsibility not to listen?
In my opinion (and most likely a great majority of others)
anyone who would actively listen to someone else's
telephone conversation has the all the ethics and
morality of a toad. (That's insulting the toad.)

}
}I can't help you there, but I CAN tell you how to make your radio (or
}ANY radio) into a radio into a radio just like the ones used by the
}Kansas City, Missouri, fire department.
}
}1. Lay out a white towel on the table. It should be large so that
}you can see small parts and so that screws, etc., will not roll away.
}
}2. Make sure there is ample bright light.
}
}3. Carefully open the radio, making sure you make good notes as to
}where all the screws go.
}
}4. See all those little metal cans with the "screws" in them?
}Tighten them down really good until they "give" or you hear a snap.
}
}5. Take a sharp Phillips head screw driver. Jab, poke and dig into
}just about everything.
}
}6. Clip random wires.
}
}7. Reassemble the radio according to the notes you have made.
}
}Congratulations. You now have a radio which works just as well as
}those 800 MHz units used by the KCFD, and which cost us, the
}taxpayers, something like $15 million.
}
}Bonne appetite.

People should be aware that this may NOT work for their city.

To make this work in Flint, Mich., for instance, you also have to cut EXACTLY 1/2 of the legs off them little spider-looking things you'll see once you get the cover off. Since some of them spiders only have 3 legs to start with, you have to count the total number of legs inside the radio, and cut off 1/2 that total number. Be careful not to cut all the legs off any one spider. If you do cut all the legs off one spider, the radio won't work in Flint, it'll only work in Detroit.

> ED

The post was to inform anyone who wanted the freq counter that it was on clearance at a discounted price. I called several stores because I wanted one at that price. I will do business with radio shack very happily when I can find something for a good or at least reasonable price.
Hence the love-hate part. The nearest electronics supply house to me is three suburbs away, and mail order has to be shipped. I try to use those options when possible, but when I want to get a part quickly and finish a project the same day, I often end up at radio shack. It's a trade off, they may have the thing I want, but at their price.
My point being that in the original post, the radio shack remark was just an editorial. I felt odd recommending the purchase of a rat shack product, even if it is a reasonable buy.

Those clocks look pretty cool but don't GPS receivers have a time display
that's super accurate? For the price of one of the ZEIT clocks you could buy a
GPS unit. Two toys for the price of one... ;-)

Just a thought...

My uncle just gave me a Realistic Pro-34 , is this scanner ok for
listening to trunked systems? Do I need a better scanner? I do not know
anything about scanners and I do not understand the codes, can someone
help??? Please. I live in Orlando and I have a list of the frequencies
but I do not understand how to use some of them, some of them only have
four digits. Thank you for any help.

Message-ID: <34375884.6A36@127.0.0.1>
Source record: 184000

Hmmm. I'm suprised I didn't see this posted here already.
Rat shack (as much as they piss me off) has their frequency counter on clearance. Apparently their moving to a new style, and the older model, 22-305, is currently priced at 39.99. I started calling, and the third store had it's display model still available, which I now own.
I figured somebody here'd be interested. Have fun.

Anyone using this program?

Tryied downloading it several times-can not activate it!!

Also getting a message as follows--mmsyserr [4] device already allocated...

Anyone happen to know what this means?

Anyone happen to know how to acticvate this program?

There is a engine activation in the upper right hand corner which does nothing!

Thanks..

Please e-mail any help hints..

Last time I checked it was called a radio.. but seriously, the
frequency for school buses is usually owned by the school district
and can be found in any good scanner frequency book if you know
the name of the school.

Has anyone popped one open to see if there are any "magic
jumpers" or places where a 12/24 switch may have been?

I doubt if Oregon Scientific designed these, as they are
available from many other sources under other names. I'd bet one
of those "other" sources would want a 24hr version.

Most of the Oregon Scientific type stuff (incl the radio-clock)
are available from The Control Company:

http://www.control3.com/

Although their page does not mention a 24 hr mode either.

Seems like this LEO actually used his mind and thought......and some
of you call them mindless.....
There are circumstances in which the officers discretion is a good
thing, and this was probably one of them. Since he was the only one
there, I'll trust his judgement.

Cool head, dude. You undoubtedly support and appreciate
a truly free market - one that encourages the highest
possible quality at the lowest possible price and where
buyer and seller each walk away happy after the transaction.

Glenn,

The Watson Tele-Gainer from EEB works well on most bands, with significant improvement over most stock scanner antennas.

John

> And on top of a return policy, how is a customer supposed to evaluate a
> product if he buys it mail order??

Several ways:

1. Boogey about town and evaluate demo models from
local suppliers.

2. Join a SIG or a newsgroup forum and ASK about others'
experiences with that product.

3. Ask the vendor for references and testimonials.

4. Keep your money in the bank and don't buy anything.

> What if the product is just a poorly designed piece of junk?
> Its not "defective", its just junk.

Well, then, by the time you ask for your money back, that vendor
is likely to be long gone. A free market does not permit 'junk'
for any lenghth of time. So if you buy junk, you're probably stuck
with it,.....but not because of lack of any "satisfaction policies".

> Whats the
> course of action to be taken? Of course, it goes back, but for a
> "supplier" to say "sorry, we just sell it, we dont guarantee it works
> for its intended purpose" is very poor business.

Sure it is. A vendor like that won't last long.

> Thats the risk mail order suppliers must take if they wish to do
> business.

Maybe. Maybe not. Playing "feely-touchy shopper" by mail is not a
part of the bargain from most vendors.

>..... I believe they have to take that small risk to be reputable.

It isn't a "small" risk, and it has nothing to do with 'reputable'.
If you want "looky-touchy-feely-return" rights, then shop for 'em,
and pay the higher price.

But think about it....after you've handled the merchandise, spilt some
onion soup on it, and your kids played drums on the case of the unit,
and then you return it. What about the next poor sap who gets it?

Kind of makes you wonder whose paws fondled your unit before you got
it, now doesn't it?

> Most mail order merchandise does not get returned.

So what?

> You are talking about a very small percentage comming back anyway, and for a
> company the size of AES, it should be a total drop in the bucket,
> especially if they add the expense to their products, which, if they are
> good business men, they will do, correct?

Yup....they will add the cost of returns to the price paid by those who
intelligently shop before they buy. Everyone gets porked that way. It's
sort of an insurance scheme.

By the way....the richest companies on the planet are insurance
companies.

> What ever happened to "The customer is always right"?

I never subscribed to that illusion, either; not as a customer,
and not as a businessman. That is the single most responsible
myth for high prices.

You notice it's not the "customer" who trots up and down the
street spouting that eleventh commandment. It's BIG BUSINESS
that spouts it....which has the effect of inducing smaller businesses
to espouse it, too. Now when have you ever known BUSINESS to
tout anything that wasn't better for its wallet? If it's
good for the vendor's bank account, then it's not so good for
the customer's. THINK about it.

It's hocus-pocus. Customers are not always right, same as
preachers aren't always right, same as vendors aren't always
right, same as no one is always right.

Right is right and wrong is wrong. Gloss and sucking up
do not right a wrong.

> Thanx in a big way....power to the pirates...!!!

It'll work, but not too well. Have you ever seen those ads for the
device that lets you use your home's electrical wiring as a TV antenna?
It's the same principle... filter out the 60-Hz power line signal but
let the higher freqs pass thru... plus a matching network. Problem
is that your home's wiring goes up, down, left, right, etc, so the
signals on some wires will tend to cancel out the signals on others.
You'll be better off using a 102" whip (or wire) with a counterpoise.
At least that'll be resonant and it doesn't double back on itself.

As for the rest of the neighborhood, your home's wiring may be
electrically connected to theirs, but the RF signal will only
pass if the other house is on the same side of the transformer
as yours. Transformers do a good job of filtering out RF...
that's why wireless intercoms don't work between houses, except
when they're right next to each other (and on the same side of
the transformer).

There are plenty of hidden antenna types that you can use, which
will give far superior results. I suggest you find a copy of
the ARRL's Antenna Book. It's got a good section on hidden and
covert antennas.

The first Ramsey kit I built was the FM-4, which is supposed to be high power mono but it doesn't come anywhere close to what the package claims.

There are a couple other Ramsey kist, like the Fm-5 and FM-6. Check the ads in Nut & Volts magazine or the Radio Shack Unlimited catalog at your Radio Snack store, marked do it yourself.

SF Bay Area

$200.00 includes monitor or swap for a used RS
Pro 43 scanner, Sangean ATS 909 or Sony 2010 SW .

Perfect for dedicated use for packet radio, decoding ACARS, WEFAX, POGSAG,
etc..Not a real speed demon in windows but does a good job for it's type.
I used it for DOS programs mostly.

Due to weight, prohibited from shipping.. Can deliver around SF
Bay area if needed.

There are no bad sectors on the hard drive and it has been defragged
and scanchecked.

IBM PS2 /70 386/25

6MB Ram

60MB IBM HDD (drivespaced in DOS 6.22 to 120MB)27 MB free
(deleting windows and MS office will give you

considerably more)

MS mouse (PS2)

IBM keyboard

IBM Color VGA Monitor (15") viewable (14.25")

loaded with DOS 6.22,Windows 3.11, MS Office with Word 6.0 and
Excel

I live in Pleasanton, CA..

Thanks

It All depends on the type of ant connections that are on the back of
the scanners once you determine this you head to radio shack were you
should be able to find all of the proper items that are needed to use 4
scaners on 1 ant

Dear Wayne Wilson,

Bill Cheek who is known world wide for his scanner books has an source of information within Radio Shack that told him about the mere request that the FCC has asked Radio Shack to follow. RS is whimping out on its customers merely because the FCC has asked them to withhold data from the its customers.
The FCC knows full well that this would not hold up in the court room, which is the reason the FCC has not issued any new rules or attempted to outlaw publications! It simply cannot do this!
If Radio Shack cares more for what the FCC merely "asks" them to do rather than the needs of their customers, then Radio Shack will loose many long term customers to the many businesses on the net who don't care one whit what the mere requests are of this intrusive federal agency.
It certainly appears that Radio Shack is all too willing to ignore the First Amendment rights we all share in the USA and bow to pressure from the FCC.
You stated plainly that the FCC "asked" you to withhold scanner schematics.
Wayne, I am not upset with you, but with Radio Shack and its willingness to turn its back on customer and the Constitution.
Please forward this letter to the President of Radio Shack, or give me his e-mail address and I will contact him.

Thank you for responding to my letter.
This letter will be posted world wide.

David (david084@flash.net)

582. Alinco DJ-X10 Review

Newsgroup: rec.radio.scanner
Date: 1997-10-06 00:00:00 UTC
From: Rich Wells <wellsr@ibm.net>

I finally found the time to turn my Alinco
DJ-X10 First Impressions into a real Review.
For all those interested, please stop by my
web page listed below. Follow the radio
monitoring link and near the top you will
see a link to the review.
I will also be receiving my Welz WS-2000
tomorrow and hope to post my first impressions
about it soon.
Happy reading!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

Exactly! The National Association of Gals (The NAGs, formerly known
as NOW), is nothing more than the mouth piece for liberal extremists.
We cannot expect liberals to accept Traditional Family Values, or even
Traditional Families! They desire more couples like Adam and Steve, not
Adam and Eve!
But, with the clinton klan in power, the wacko leftists are free!
Free to make us laugh at them almost every day!

School Buses commonly use the VHF band,.....in canada the buses run in
the 160-169mhz but they can be found just about anywhere,.....what i
suggest is to LOOK AT THE ANTENNA
if its small like a foot its probably in the UHF range scan 400-500mhz
iyou will find it there if its a few feet tall like 3 or 4 feet it will be
in the 150-170 \mhz if its quite long it will be in the 30-50mhz range if
it has a loading coil try the lower frequencies first.

Scanner dude.

> stand for Service for the customer.

Too late for you now but if I were in your shoes I would have done it
differently.

I would not have accepted the shipment. Just refuse it and UPS would
have sent it back. They can't accuse you of doing anything to the box
contents if you never took delivery. Then tell them to reverse the
charges on your credit card (if that's how you paid). You should be
liable for the shipping charges since you DID order it, but there is no
reason for them not take it back.

Other than that I would have to agree with you - it's silly for them to
piss off a good customer over a single order return.

IANAL, but that is not true in California. In this state, merchants can set
any return policy they want as long as they notify the customer before hand
(posting prominently is considered sufficient). You are right that it is
not good business to alienate your customers. WPE9CGQ

A few days ago, in an excess of what I thought to be clever humor, I posted a message to this newsgroup falsely berating a close friend. I should have ... no, I DID ... know better, but I didn't stop to think. That posting (I won't go into it in detail) caused a good deal of embarassment and disappointment to another user who has been a valuable contributor here and has rendered me invaluable assistance. He is due an apology in as public a manner as the supposed cleverness that caused the anguish. It is proferred herewith. Thanks, (you know who you are). I appreciate your patience. Enough said!

I do not think AES is the cheapest. There are many mail order firms
having cheaper prices and possibly better service too. I called AES few
times and I was not happy with the conversation. I do not want to buy
anything from them unless it is very necessary. It has been a long time
since I called the store and they are still in business today. I think
they are doing fine without my business. I am just a little guy why
spend few hundred $ once in a while.

597. Hams CAN renew ONLINE w/FCC

Newsgroup: rec.radio.scanner
Date: 1997-10-06 00:00:00 UTC
From: stevewfd@aol.com
Message-ID: <19971006135001.JAA26961@ladder02.news.aol.com>
Source record: 183880

From ARRL Bulletin 58 (ARLB058) October 3: Hams now can renew their licenses on line. The FCC's Wireless Telecommunications Bureau (WTB) has consolidated eight renewal forms into one form. Form 900, Application for Electronic Renewal of Wireless Radio Services Authorizations, is an interim measure to permit all WTB licensees, including hams, to renew their licenses electronically.

This form is only for renewals, not for license modifications. You can only enter changes (eg, name, address) using Form 900 as a part of the process of renewing your license. You can only use Form 900 if the expiration date on your license falls within the renewal window (within 120 days of expiration). You cannot use Form 900 to renew an expired license. Form 900 may only be submitted electronically. No Form 900 paper applications will be accepted. When filing Form 900, you will be required to enter a Social Security Number for a taxpayer ID number.

Access Form 900 on the WTB Electronic Commerce page, http://www.fcc.gov/wtb/electcom.html (click on Production Page for Electronic Commerce Applications to access the Form 900). Click on any item number for filing instructions. Once you have filed the form, clicking on Electronic Renewal Query lets you view or print the information submitted.

Once you have successfully submitted Form 900, it is important to click on the Continue button to obtain the fee information pertaining to your filing. The screen will prompt you with a Fee Remittance Advice, Form 159. The form will indicate that there is no charge to renew an Amateur Radio license (except for vanity call sign holders, who won't have to renew for several more years yet).

Form 900 updates will be batch processed at night. They are not instantaneous.

Send comments about the FCC Form 900 to sreed(at)fcc.gov.

For technical assistance, call the FCC Technical Support Group at 202-414-1250. Other general information may be obtained from the FCC's National Call Center at 888-225-5322 (CALL-FCC).

I have a 40 channel CB plus 10 channel weather, TRC-234 for sale.
$70.00 includes shipping CONUS. This little handi-talkie is less than 1
month old. My hearing is so bad I can't understand 60-70% of whats
being said so I would like to sell.
I also have a programmable scanner, Regency R-4030 (BC200-XLT same as)
200 channel in 10 banks, auto wx button, lock out, scan, manual, search,
etc.etc. mint condition, new nicad battery pack (replaced in early Sept)
$150.00 shipped CONUS. Selling for same reason as the CB. This unit is
mint condition. Cellular mod done. (only mod made).

: of the phone, and you do not the who is right?

: where do ethics come into place? You may have the "right"
: to listen but do you not have the moral and ethical
: responsibility not to listen?

The ethics of the listener is not the issue. You have to be
aware of your own privacy and what must be done to protect it.

If it's not some harmless scanner buff listening to you, it
could just as well be a malicious thief (placed a credit card
order lately?) out to make your life miserable. Are they
concerned about the "ethics" of their listening? Absolutely not!

If you make a law to stop the listeners, the only people who
will stop listening are the ones who wouldn't abuse the info
anyway. If you make an effort to protect yourself for a few
hundred bucks and get some decent encryption on your phone, then
you are safe, laws or no laws.

To paraphrase, anyone who thinks their telephones are secure
has the common sense of a sponge, and that's being insulting to
the sponge.

Hi Ron,

It possible that this person has a cordless phone that was built for
use in another country. The 39.800 is the handset frequency for
channel 2 in Australia and New Zeland.

604. FS: Hoka Code3 Gold UHF/SW Decoder

Newsgroup: rec.radio.scanner
Date: 1997-10-06 00:00:00 UTC
From: Don Stegner <dstegner@erols.com>
Message-ID: <61caa3$iel@winter.news.erols.com>
Source record: 183887
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hoka Code3 Gold UHF/SW Decoder List $595 reduced $375
Decodes the following:
ACARS. For VHF Scanner enthusiasts, one of the most annoying features of modern life is the recent introduction of data to many VHF frequencies. Aircraft followers have enjoyed listening to aircraft giving their positional reports and allowing listeners on the ground to plot the pilot's flying route from the comfort of their armchair. But a new threat has arrived in the form of ACARS. This 2400 bps data system has been around for some years but only recently has it really increased in popularity with airline companies. Air traffic control centres no longer need to speak by voice to pilots. The pilots can communicate directly with the ATC computers thus alleviating the radio congestion of the normal ATC frequencies. Code3 Gold allows you to regain the edge.
POCSAG. By far the most popular paging system here and in Europe. Watch the messages being sent to bleepers, read the messages. Open your eyes to the fascinating world of numeric and alphanumeric pagers.
DTMF. Anyone with a modern telephone has heard this system. Used on many VHF channels to dial numbers, access voicemail or remotely control answerphones. PLUS, If you've heard these tones on HF Aircraft bands, you'll now be able to decode their 'selcal' systems used by transoceanic flights.
PACKET. Amateur radio operators use this system to interconnect computers on VHF and UHF. 300 bps is used on shortwave, 1200 bps on VHF/UHF.
BAUDOT. This is used all over the world by Russian Maritime fleets, Military, Press, Diplomatic and Utility stations. All baud speeds and shifts.
ASCII. Mainly used by amateurs, but some Diplomatic and Utility usage.
SITOR. THE mode used by ships for sending telegrams and telex calls on shortwave. Also used by Coast stations to send maritime navigational safety messages .
NAVTEX), Diplomatic and Utility stations.
PACTOR. 100/200bps packet like data system mainly used by amateurs but also by the Swiss Red Cross and United Nations for their links into the world's trouble spots.
FAX. Used by meteorological stations to send weather charts and satellite pictures. On VHF polar orbiting and some geostationary satellites (e.g. Meteosat) use a special 2400Hz modulated tone system. This special "AM" mode is also fully supported by Code3 Gold.
SSTV. Code3 Gold supports Martin 1 in full colour if you have a video card that is based on the Tseng ET4000 chipset.
Optional systems included: If you want to really catch ALL the action on shortwave, you need the "Shortwave Option". This adds nearly every decodeable system there is to find on shortwave. Watch Diplomatic stations, Customs, Police, Military, decode weather stations sending 5 figure groups

and many more unusual stations. Decode "Annex 10" Aircraft selcals, Morse, Hellscreiber, ARQ-S, ARQ-E, ARQ-N, ARQ6-90/98, ARQ-E3, ARQ-SWE, ARTRAC, POL-ARQ, F7BBN Baudot, Twinplex, CCIR242 TDM, CCIR342-2 TDM, FEC-A, FEC-S, Autospec, Spread, HC-ARQ, TORG10/11, ROU-FEC, HNG-FEC, COQ8, COQ13, Piccolo Mk6, SYNOP (AAXX, BBXX with 10,000 stations).

Email if interested.

Is there anyone out there that could give me some info or point me towards some books that would help explain how a person can put a tap on a cell phone. I know is is possible for federal agencies do it all the time. I believe I need some equip. to extract the serial number and other encoded info that is in the cell phone. I then take this info and program it into a unit/device..similar to a scanner...of which I can then pick up this individual when he/she gets or makes a phone call. NOTE: I am not interested in reprograming phone to make illegal fraudulent phone calls....just a unit that can monitor a single cell at all times.

Thanks in advance for any info.

I do not know about in your car, but it is not legal to listen to one in your house. It must be outside the house. This makes sure the public sees the smile on your face, when you hear all of that action.

What is interesting is how pervasive Oregon Scientific is throughout
Europe as well as here in the states. I see their products sold
all thru Germany. I believe that Oregon Scientific is the manufacturer
of the weather station that Radio Shack sells. I have seen the same
equipment sold at Hamfests under other brand names. Oregon Scientific
seems to have a presence everywhere.

So Tandy refusing to release information (which is their right) is the
government forcing shit down ours throats? You can ask for all the
information you want, no one has to give it to you. Just because the
government ask companies not to disburse information does not make it
illegal to do so.

With all due respect to your position, if you are transmitting in the clear, you have no expectation of privacy whatever. No more so than if you were carrying on a 'private' conversation in a crowded elevator. You would expect all the other riders on the elevator to politely 'not listen' I suppose? There isn't anything magic about it being or looking like a 'telephone'. It's a transmitter sending out clear, unencrypted signals, free for the taking.

I dont know if that is true at this point. The democrat who started
the anti scanner bill HR 2369, is from named Markey (D).
Next, Democrats controlled the Congress from 1954 to 1994 as I stated
before. They had FULL control, and therefore, when uncle bill wanted to
pass the Brady bill and the Assualt weapons ban, he knew his DEMOCRATIC
party friends in Congress, who were in control of Congress, would pass
these bills in seconds!

Well, almost!

Actually, i have a friend who is looking for a source of "not SO expensive" radios for his home guard unit, to be used during exercises in conjunction with their issued military radios, wich are limited in numbers as well as being heavy and cumbersome.

:>Learn to read and UNDERSTAND stuff before you make such (stupid) blanket
:>statements.
:
:OK. The revised Section 705 of the Communications Act of 1934 will
:now make it illegal to "intercept OR divulge" any communication not
:specified as exempt (ham, CB, aviation, distress, etc.). The current
:Section 705 makes it illegal to "intercept AND divulge" such
:communications.
:
:What's to understand? "Interception" with or without divulgence will
:be illegal. Period. No more monitoring.

Way back when it was illegal to be in possesion of a radio receiver
two friends intercepted a distress call from a ship in danger of
hitting rocks. They knew that the monitoring station was not functioning
so if they did not alert authorities the ship would not survive, yet if
they did they would be in trouble for having a receiver. They did alert
the authoritys and the ship was saved. They would have been in serious
trouble except that the law was changed to allow receiver ownership.
That was in the days before voice transmissions.

>Go to your local RS and tell them you want to buy the PRO-2042
>scanner, have your check book or plastic in hand. When the sales
>droid, deal with the store manager if possible, gets to the counter
>with and starts to enter the in info; stop him/her and tell that you'd
>like to order the service manual for that scanner and have it RSU'ed
>to your home. If the sales droid says that he wants to finish ringing
>the sale on the scanner first, tell him that you want it on the same invoice.

Uh, Bill.....the POS computer will not let the sales "droid" ring the RSU order on the same slip as the scanner. The RSU order is sent via modem and ordered "on-line" at the time the slip is written, and the "in-store" sale is kept on the local server for the end of day totals / inventory counts. Several persons in this newsgroup seem to think that the "droids" at RS are secret FBI agents out to get them. Get real man, we are paid minimum wage to stand there and take abuse from paranoid idiots.......the employee discount sucks, almost makes it not worth bothering....if you don't want a RS scanner, vcr, part, whatever, GO SOMEWHERE ELSE ! We at the store do not make corporate policy, and if you think that going to your local RS and doing what you have described will make the "dickheads" in Ft Worth change their minds you are dead wrong. They are too thick headed to listen to anyone about anything !
Anyway, back to the original idea, the way the system is set up, it won't allow RSU and regular sales to be on the same slip, doesn't matter if you are getting an "illegal" manual or an antenna, or a CMOS chip - just won't work......sorry

Rich, Part Time RS "sales-droid"

Folks, This is a serious question and should be treated as such...

AcidAngel (love the name)...
The rules are different in different locations ... however in most
locations your radio will need the following
1. Powers of Arrest training (also known as Cuff-N-Stuff)
2. Techniques of Search and Seizure (or how to make money for your
department)
3. Baton Training (head-cracking 101)
4. Combat Pistol craft (black targets on white backgrounds)

Once your radio has been through all this, it can be sworn and badged...

Did anyone notice the media just about refused to state the TOTAL
number that attended? I heard "hundreds of thousands," "thousands
upon thousands" and many other expressions but no one would state the
estimated total. Back during the "million man march" that is all they
could talk about. ?!?!?!?!!?

644. antenna for all bands

Newsgroup: rec.radio.scanner

>>serviced?

Tandy service center.

>It would be easier to order one from Radio Shack Unlimited through your local
> radio Shack. Will cost about $15.00 and be sent right to your door

The last few that I ordered were very poor photocopies of the
original. Two were totaly useless. Shades of grey don't copy well.

>The Shack will also be able to send your scanner in to the service center.
> Check with them for pricing. Warning: If the scanner has been modified,
> service techs have been known to reset the scanner to factory specifications.

I've had mine serviced many times and never run into this.

Yes, that is the point. Think of the positive comments that would have
been generated if they had "bent" their policy for this customer - even
if the customer was at fault. In retail, there's an old addage about
the best customer being one who was angry or upset with the "store" and
who was satisfactorily treated and became a loyal customer.
It's easy to be a good vendor when everything goes well.

->
->Why not? Tell me why you should be able to listen to my private
->telephone conversations?

Your response goes beyond any reasonable interpretation of Cheek's
remark. You assume that the only rationale for access to schematics
and maintenance data is a desire to perform illegal modifications.

The analogy WRT cars would be that you should not have access to
maintenance data because you might want to illegally defeat smog
control equipment. Is this what you really intend to assert?

With specific reference to your concern about privacy, consider that
the Communications Act of 1934 recognised that there should be no
expectation of privacy associated with radio transmissions. Somehow a
collection of CongressCritters, driven by cellphone companies, believe
that declaring something illegal changes reality and will reduce the
(perceived) problem. That's just plain absurd.

->I realize that we can't really legeslate morality. Tell me what
->is moral about listening into someone's private conversation, legal
->or not.

Tell me what is sensible about shouting out from a rooftop where
others can listen and telling them "Don't listen! This is private!"
If you want to ensure your privacy, there are many measures you can
take. Using unencrypted radio transmission isn't one of them.

Hi all,

I'm looking for a nice used mobile scanner with 800mhz capability. It doesn't need to be cellular capable. Must have all original mounting accessories. CB reception capability would be nice, but not necessary. Something like the older AOR mobiles would be ideal. Not looking to spend much more than $100. Please E-mail if you have one for sale and I'll contact you ASAP.

Thanks,
Steve Phipps

My apologies there: I never had the cash to get a 2006 so I did not know it had WFM, I stand corrected there. As you say though, most of RS scanner (including all 5 of mine over the years) have no WFM coverage. My dumb question that arises from the ashes is: Why block those frequencies if the radio can receive them? Was RS just lazy or was there a legit reason to block coverage?

Pat,

I have the RS pro2026 which is the RS clone of the 760xlt. While I like and get lots of use out of mine, I would tend to think the BCT-7 would be better for your dad, because the last thing he's gonna want to do is have to look up frequencies on the road, especially if he is going from state to state all the time. Plus, most of his time will be spent on the highway, so all he'll need is the highway patrol freq's which are preprogrammed. On the 760, when you hit the police button, you get a mish mosh of everything that has a "P" as the first letter of it's FCC allocation code, including images and intermod from pagers, business radios, and so on, which makes the feature almost useless (although it WILL pick up cell images from 896.1125 on up, which was amusing when I first fired it up) I don't know how it is on the BCT-7. I know that monitoring CB channels is something the 760 will definately NOT DO. As far as a backlight, I would say that not having one is inconvenient but not so much so that I would get a different scanner for your dad. The BCT-7 was designed for highway use while the 760 is for city folk like me.

Source record: 183832
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.cb,rec.radio.amateur

I can explain it for them: $$M-O-N-E-Y$$

When my Pro-25 decided that it was a base scanner (wouldn't charge the batteries, but worked great plugged in) and not a handheld I took it in for service as it was only 3 weeks old. They sent it off to the service center who replaced a faulty barrel plug and diode, and re-adjusted the scanner while it was there(at least that's what my receipt said). The whole adventure would have cost over $80 if it were not for the warranty. Now the scanner is out of warranty and it happened again. I gave in to it's demands and it is now a permanent base scanner. I don't want to open the case, because when I do that to scanners they get mad and don't work anymore (Dammit Jim, I'm a programmer not an engineer!) But if I had the technical knowledge I could buy the parts and fix it for about $3 myself.

So now they are saying it's the FCC that requires this, but I personally don't buy it. They just want to keep scanners coming into their service centers. Besides, scanner sales make up a mere 2% or less of Tandy's annual revenue, with electronic parts only slightly higher - what do they care if we don't buy them anymore? That's why I will not buy RS scanners anymore. As each one breaks, it will now get the Uniden equivalent or better.

Ask 'em to show you this "FCC Order". Betcha they won't even reply!

-Phil

I have 2 Army surplus TA 312 telephones in good working order I would like to sell or trade. They have plates on them that say they were overhauled in 94. Both work great. I would like sell them or trade them for a portable shortwave radio, preferably a Sangean ATS 909 or a RS Pro 43 scanner. If no trade, then best offer gets them. (I really don't know what they go for on the militaria market, but I'll probably find out soon !) Buyer pays shipping. (14 lbs total)

Thanks,

Monty

> Do you have any AM band transmitter circuits?

Older editions of the Radio Amateur's Handbook, found at the library,
have schematics of AM transmitters, like ones that are just above the AM
BCB at 160 meters.

I am currently out of work and am forced to sell some stuff to pay
bills. Here is my list. All equipment works 100% and is in either
brand new condition or dam close. Prices are firm and you pay shipping.

Radio Shack PRO-62 with brand new NiCad rechargable
batteries, antenna & AC wall charger/adapter. This hand held scanner
receives:
30-50, 118-174, 380-512, 806-823.9875, 849.0125-868.9875, 894.0125-960
this radio has not been modified. It is in excellent condition and has
only been used indoors as a base scanner. 8 months old paid $299+6%
sales tax.
FS: @ $175

Motorola SP-50 Hand Held UHF 2Channel - with 1 battery, antenna & drop
in rapid charger with slow charge option. This radio is in brand new
condition
and is less than 4 months old. It is currently programmed for 2
channels in the 460Mhz band. I paid $389+$49 for the rapid charger.
FS: @ $275

Yaesu FT8500 2M/70CM Mobile w/Deluxe Microphone - Yaesu
programming software, programming cable, Mars/Cap mod, tone decode board
installed, attractive microphone stand, box and all literature.
You don't even want to know what I paid for this (Way too much!)
FS: @ $590

Try just doing a net search. It took me about 15 minutes to find the
"fix" to convert my RS 2010 so that it could again pick up ALL the
frequencies that the jerks in congress don't want us to listen to. In that
particular model, it only involved cutting 2 diodes.

Just install the FCC's program. Visual Basic has built in database drivers
for Access databases, so you shouldn't need Access to view the records.

I, on the other hand do not have 3GB free for all that data!

697. ARRL & HR2369

Newsgroup: rec.radio.scanner
Date: 1997-10-07 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19971007011100.VAA07778@ladder01.news.aol.com>
Source record: 183890

I received today a copy of the revisions to H.R. 2369 (Tauzin's bill) proposed by the ARRL. If accepted by Tauzin and his sponsors, and introduced as a replacement or amendment to the current wording, it appears to take care of 99.9 percent of our concerns as scanner users.
Please do not respond on the various listservers. I'm posting this FYI only, and not to start an off-topic discussion. For those of you who subscribe to multiple lists forgive the multiple copies.

As you may recall, Section 2 of H.R. 2369 requires the blocking of all CMRS frequencies from scanners, even though some public safety agencies also use those frequencies. In the ARRL's version, CMRS is replaced by "frequencies exclusively allocated to wireless mobile telephone services, including the domestic cellular radio telephone service." It also limits the ban on digital-to-audio conversion to wireless cellular telephone frequencies, leaving the door open for digital-capable scanners for public safety monitoring.

Section 3 or H.R. 2369, which appears to make monitoring everything but CB, ham, FRS, GMRS and maybe aviation and marine, is amended in the ARRL version to include the exemptions found in chapter 119. I also made this suggestion, both in correspondence to Tauzin and in an upcoming PopComm article. Briefly, it would continue to be legal to monitor, but not to divulge, communications relating to any station for the use by the general public, or on frequencies allocated to services that relate to ships, aircraft, vehicles, or persons in distress; by any governmental, law enforcement, civil defense, private wireless or public safety system including police and fire, readily accessable to the general public; or ham, CB, GMRS, FRS or any marine or aeronautical communications system.

This really looks to be a workable solution to achieve Tauzin's goals while protecting our hobby. Kudos to the ARRL on this one.

Hello to all;
Thanks for taking the time to read and respond.
I am looking for info on an old scanner i picked up at a hamfest for
five bucks. It's a J.I.L. model SX-200.
All works fine with it i just need some info on how to program scan
banks "A" and "B" also the upper and lower search limits. Also any
info on if this thing has the capability to lock-out channels.

Thanks again in advance..... Fulton
P.S. remove the ** from the email address respond

It would be easier to order one from Radio Shack Unlimited through your local
radio Shack. Will cost about $15.00 and be sent right to your door.
The Shack will also be able to send your scanner in to the service center.
Check with them for pricing. Warning: If the scanner has been modified,
service techs have been known to reset the scanner to factory specifications.
In this case, try Bill Cheeks and see if he or someone he knows could work on
it. Have you asked any TV shops or local Amateur Radio operators for assistance?

If you remember, David, the original post said a guy couldn't get it from the Tandy service center. Makes sense in a way; they just fix 'em, they don't sell. However, the idiot he talked to should have referred him to a Shack and left off the B.S. about the FCC.
I just got a manual for a Pro-26 today. Ordered it last week, no problem. Everything else posted about this problem has been oration, plain and simple.

: My apologies there: I never had the cash to get a 2006 so I did not know it
: had WFM, I stand corrected there. As you say though, most of RS scanner
: (including all 5 of mine over the years) have no WFM coverage. My dumb
: question that arises from the ashes is: Why block those frequencies if the
: radio can receive them? Was RS just lazy or was there a legit reason to
: block coverage?
: -Phil

At the time that the 2006 was designed, full-coverage was a costly option.
The space between 520-760 is not used much, and the design of the 2006
puts one of the IF frequencies in the above range (610 Mhz).
Even the current top desk-top unit from RS has the above gap.
At this point in time, it's mostly Tandy not requesting full-coverage
units from GRE & Uniden:the price difference is not as big of a issue as
it used to be, so certainly the higher-end models could be
full-coverage(minus CMT, of course), at only a slight price premium.

And, in case you are concerned about receiving the WWV signal, the time calculations displayed on a GPS receiver are actually transmitted from the individual GPS satellites, each of which carries two atomic clocks (one "high precision" and one "medium precision". Not WWV, but still VERY accurate. In fact, the accuracy of the transmitted time signal is one of the key factors in the receiver determining the accuracy of your position.

:: programmed (by a Motorola dealer) to talk to the "talkabout; BUT, it
:: may no longer be type-accepted if this is done, and, therefore, no
:: longer "legal" to operate......
:
:Well, sorta. The basic requirements for an FRS radio are:
: 0.5 watt ERP
: Non-removeable antenna
: +/- 2.5 kHz deviation
: 3 kHz max audio high end response
:
:Note that the deviation is half the normal GMRS and itinerant
:(red dot etc) radio deviation. This is because the FRS frequencies
:are sandwitched between the GMRS frequencies and the low deviation
:is required to prevent adjacent channel interference.
:
:Drivel: I haven't heard the terms "wide-band" and "narrow-band"
:since we did the conversion from +/-15KHz deviation to +/-5KHz
:deviation in about 1971. Those "wide-band" radios were really
:cool with the dynamotors, vibrator power supplies, selenium
:recifiers, loctal tubes, 5 lb microphones and garden hose size
:cableing. Ah, nostalgia.

The wide band radios with the fully solid state and light weight
were pretty cool too. I had one that was so light I though it had
nothing inside yet it was complete. Ah, nostalga.

Once again, be careful with "most"!

The Pro 2004,2005,2006,2035,2042, and the handheld Pro-60 have wideband
FM filters.

Maybe you should say "most" low-end Radio Shack scanners don't have FM
wide.

Paul Gunn wrote:

I'm heading to Melbourne sometime soon, and I'm looking
for some info

on scanning there.

Firstly, my understanding is it's legality is similar to NZ, "don't

chase ambulances and don't tell anyone what you hear and we'll ignore

you". Sound about right? If it's more restrictive I'd *really* like to

know.

Secondly, I'd like specifics for what to listen to in and around

Melbourne, or general band plan information if you can't help with

specifics.

I'm quite happy to try to fill in the same sort of gaps any Ozzie may

have about their small neighbour.

I've heard Australia before without leaving home. During some parts of

the year, a local channel in my town gets signal from some suburb in

North Sydney. Quite odd.

Thanx, email replies possibly best (after removing antispam insert).

I just inherited this scanner from my brother--he bought it for golf tournaments and never once used it so I said I will put it to good use. I am a new to scanning--here is what I know--this scanner is basically two and half years old, and it does definetly pick up cellular between something like 868-900. I though these didnt pick up cell phones, but this does. What can you tell me about this scanner and what interesting frequencies should I check out? Where can I find Police, fire and stuff like that, and does cellular only come in btween 868-900?

Depending on the condition and any accessories that may have come with it (including the box), I'd say $150.00 to $200.00

What may help you justify a decent selling price is that the 1500 covers full 800 w/o blocks (at least the one I saw did). Good Luck!

What's the real deal here?????? Everyone in this group bitches and complains about how their scanner won't get cellular so they resort to tactits to try to work the system.

Bitch Bitch Bitch,

My scanner won't pick up private cell fone calls.WAAAAAAAAA

My Radio Shack won't sell me the manual to make it get private cell fone calls. WAAAAAAA

My government is trying to screw me over(well we all knew that) WAAAAAAAAAAA

Hind sight is 20/20, and EVERY FUCKING BODY WHO HAS BITCHED OUT HERE ABOUT NOT BEING ABLE TO GET THEIR MANUAL OR HAVE THEIR SCANNER GET CELLULAR HAS ALL SAID ONE THING,,,

"well my scanner has the ability to get it, BUT I DON'T LISTEN to them",

"my scanner is modified, but I don't listen to the 800mhz range for phone calls",

" I just wan't to have the manual so I can FIX THE SCANNER WHEN IT BREAKS",

1. WHY IN THE FUCK DO YOU BITCH ABOUT THE CELLULAR RANGE IF YOU DON'T LISTEN TO IT....

2. WHY DO YOU MAKE IT SUCH A BIG DEAL THAT YOUR SCANNER GET'S 800mhz(particularly the cell range) IF YOU DON'T FUCKING LISTEN.

3. Like you could grab an O-SCOPE, SIG-GEN and fix the scanner yourself. Most scanner users don't know the difference between a Zener Diode and a SIGNAL DIODE. Or the color code on the resistor...etc...

The boy that cried WOLF is the one that get's screwed at the end of the story. And the story out here is a sad one.. Everyone who has RE'd to Illegal scanner service manual, has had one thing on their mind,

I want it so I can modify my scanner to do an ILLEGAL thing. Why do you care so much if you're not going to use it anyways?....

Where are your morals as far as privacy goes. I could broadcast ALL!! of your credit history over the net to all of the wounderful people out here and it would be PERFECTLY LEGAL. (I know, I'm a lawer). It's public information(that's the truth) but you wouldn't want anybody to know cause it's your PRIVATE LIFE. RIGHT???

You may bitch about well, I'm not invading or tresspassing on anybody's property to get this info. I'm just pulling off the airwaves.

But still, you are intercepting a signal that was not INTENDED FOR YOU either by the WRITTEN CONSCENT OF THE OWNER OF THE BROADCAST(the sender) or the listening of the BROADCAST(the person on the other end) and there for you are in VIOLATION OF THE ANTI-WIRE TAP LAW that everybody around here thinks they know so much about.

Well, the person knows that he/she is BROADCASTING ON PUBLIC AIRWAVES AND THEREFORE, MUST ACKNOWLEDGE THE FACT THAT THE SIGNAL COULD BE INTERCEPTED AT ANY TIME WITHOUT THEM KNOWING.

Nice try but that won't work. For you to broadcast on ANY,,ANY,,ANY!! FREQ. is a privelege. And those rights can be taken away from you at anytime. How many FM stations have you seen lose their FCC lisc. because of vulgar lang...etc...THERE IS NO WHERE IN THE CONSTITUTION THAT SAYS THAT YOU HAVE THE RIGHT TO BROADCAST ON ANY RADIO FREQ.

Why don't you BITCH about not being able to TRANSMIT on 144mhz without having a liscense....."It's my right to be able to BROADCAST on any freq. I want" BULLSHIT. You have no rights when it comes to FREQ. allocation. You may not like it, but it is a PRIVELEGE to use a CELLULAR FONE BECAUSE YOU ARE ALLOWED TO BROADCAST ON THAT FREQ..... The FCC can take it right back without even blinking an eye. That's why you need a HAM liscense to transmit on HAM FREQ.'s If you do without one, then it's ILLEGAL no matter how much you like it or not. You are NOT PRIVELEGED TO TRANSMIT ON THOSE FREQ'S WITHOUT A LISCENSE......PERIOD!!

So why do you bitch so much about trying to do something illegal... Why don't you bitch about why we should be allowed to drive drunk..... Fight something you know more about rather than just bitching about...

WHY DO YOU USE "BITCHING" so much?

Cause that's what 97% (of the 179 messages on this subject) seem to do. BITCH about why they can't have illegal freq. in their scanner..

But I paid for the scanner. I have a right to the manuals.

That's true... But LISTEN ALL YOU DIPSHITS OUT HERE,,, IT'S A "R E P A I R" let me say it again..... "REPAIR" manual...

That means that you use the info to FIX THE PRODUCT. Not to ILLEGALY modify the product. And how many of you could actually go down to the componet level and de-solder surface mount chips, or decode the timing of the CPU...etc. You say that I talk down to you??? WELL LOOK AT THE IMPRESSION I GET FROM A BUNCH OF PEOPLE THAT WANT TO DO ILLEGAL THINGS..

I want plans for a NUCLEAR BOMB so I can protect the world from war(that's good,, here you go, in the name of world peace).

I want plans for a NUCLEAR BOMB so I can plan a terroist atack on any city of my choice(NO WAY IN HELL I'M GOING TO GIVE YOU THE PLANS)..

I would like a service manual for my Pro-2006 cause it just died and I need to know some voltage points to test for..(Okay, here you go.. I should know, I did it last week at my nearby Radio Shack)

I would like a service manual for my Pro-2006 cause I need to know how to get it to recieve Cellular fone calls.(Yea right buddy, get the hell out of my store)

Yes, I did order one last week.. After telling the Regional Manager that I was a lawer and that he and Tandy were going to have some serious legal implications if they didn't...

"well the FCC tells us that we can't",

They have no power to do so.. They can't legally ban you(Tandy) from selling scanners if you don't comply...

Well after about an hour fone call. I recieved my Service Manual.

THE POINT OF THIS STORY IS,,

If you want to use the manual to fix your scanner. Go for it.. I even help you out!!

If you want to use the manual to do ILLEGAL things..(98% of you do).. Well have a nice life

HAVE PHUN,
Jason

Bill hits the nail on the head here. Makes me think of my last 2
purchases. A "new" set of 2-ways, that had the first owners name and
address etched inside the battery compartments(one of them would not
transmit either). And the "new " event scanner I purchased that was
preprogramed with out of town police freqs, railroad freqs and a scratched
display crystal. They both went back!

161.64-76 are part 74 remote broadcast frequencies which can be used by Radio, TV, Big cable systems, or network entities (i.e.. ABC, CBS, NBC etc.). In the Boston area they are used by radio stations for remote broadcasts but in the NY area primarily used for TV two-way use. The original channels where 161.64, 67, 70, 73, and 76. However now a days they can be split into any bandwidth or freq. as long as there is no interference to other users. They are locally coordinated usually through SBE chapters. These are the same as the 450.01-450.98 and 455.01-455.98 bands also used for part 74 auxiliary use. The other high band freqs. that are shared with other services are 166.25, 170.15 and several 153. freqs.

I've had a guy offer me a RS Pro 2041, claiming it is easily modified for cellular...just cut a diode like in the 2006...

Is he pulling my leg? I didn't think you could modify the newer scanners that easily. He says the easy mod still works on the 2041...???

Does anyone know about this particular scanner?

Here or E-mail -

Thanks.

John

Hello,

Can you let my now with software you are using ?
And where to get it ?
And how to let it running ?

Iam within the Netherlands

Many thanks

http://stad.dsl.nl/~wolly1/index.html
for my crypto sites.

748. HELP MOBITEX/RAM

Hello,

I cant get MOBITEX/RAM working
Get info on screen but cant reed it
(ASCI symbols)

Its within the Netherlands.

Please, please advice to get start it running !
(I use DISCR. output and PD interface)

Many, many thanks

http://stad.dsl.nl/~wolly1/index.html
for my crypto sites.

>What's the real deal here?????? Everyone in this group bitches and complains
>about how their scanner won't get cellular so they resort to tactits to try
>to work the system.

The real deal here, at this moment, has nothing to do with cellular
phone monitoring. It has to do with a spineless American <cough> company
who either does not care about the First Amendment Right of being free
from government censorship of what one publishes, OR is to damn spineless
to admit that it is their own decision to no longer offer scanner service
manuals for sale to the general public, and is simply using the excuse
that the government asked them not to.

> Nice try but that won't work. For you to broadcast on ANY,,ANY,,ANY!!
>FREQ. is a privelege. And those rights can be taken away from you at
>anytime. How many FM stations have you seen lose their FCC lisc. because of
>vulgar lang...etc...THERE IS NO WHERE IN THE CONSTITUTION THAT SAYS THAT YOU
>HAVE THE RIGHT TO BROADCAST ON ANY RADIO FREQ.

We are not talking about transmitting. We are not even talking about
receiving. We are talking about the government (as claimed by Radio
Shack) forcing a private company to not publish material which is 100%
legal to publish.

>I want plans for a NUCLEAR BOMB so I can protect the world from war(that's
>good,, here you go, in the name of world peace).
>
>I want plans for a NUCLEAR BOMB so I can plan a terroist atack on any city
>of my choice(NO WAY IN HELL I'M GOING TO GIVE YOU THE PLANS)..

The plans are available already. They were available 20 years ago when
some school kids used unclassified reference sources to build one
for a science project. It is not illegal to publish nuclear bomb How-To's.
(Although Diane Feinstein would like to see it so)

>I would like a service manual for my Pro-2006 cause it just died and I need
>to know some voltage points to test for..(Okay, here you go.. I should know,

>
>Yes, I did order one last week.. After telling the Regional Manager that I
>was a lawer and that he and Tandy were going to have some serious legal

>implications if they didn't...

I applaud you for at least finding out the story first hand. On my visit to Radio Shack yesterday to do the same thing, there was no Regional Manager around. I dealt with a clerk with NO "manager" listed on his tag, and the only other employee in the story, looked more like a sales person rather than someone who cared to really help a customer (although at points, I did speak loud enough for him to hear, just in case he had some insight to add)...

>"well the FCC tells us that we can't",
>
>They have no power to do so.. They can't legally ban you(Tandy) from selling
>scanners if you don't comply...
>
>Well after about an hour fone call. I recieved my Service Manual.

And as a lawyer, how much could you have earned in that hour if you had not had to make that phone call? Should you have had to jump through all sorts of hoops just to satisfy the seller that you were not up to anything evil?

Should the Government start requesting that bookstores start making sure that purchasers of "The Joy Of Sex" aren't going to commit acts of sodomy, before they sell them the book?

Should the Government request of hardware stores, to verify that you are not making a Potato Gun before they sell you that PVC pipe?

Should the government request of nurseries, to verify that you are not growing marijuana, before they sell you that bottle of VF-11?

Should each of those above mentioned businesses decide to comply with the request and then use the excuse that their hands are tied because the government asked them to do such?

>THE POINT OF THIS STORY IS,,
>
>If you want to use the manual to fix your scanner. Go for it.. I even help
>you out!!
>
>If you want to use the manual to do ILLEGAL things..(98% of you do).. Well
>have a nice life

It's a sad day in this country, when the act of purchasing a manual which *can be used* for doing something illegal, itself becomes a crime.

Stupid point. Like many other companies, Radio Shack can do what it wants. There is no reason they HAVE to sell anyone a service manual. The proof is the guy at the counter saying no. This First Amendment stuff is crap. RS can do what they want.

If it's Radio Shack's choice, fine. But their excuse that they are
only complying with a request from the FCC, and that they'd love to
keep on selling the manuals, but their hands are tied, makes them
spineless liars then.

Nope Jonathan, this is an unmoderated news group except for gross violations like gigantic binaries. It is just too tempting for a moderator to consider himself to be a demigod so IMO, this is the lesser of two evils.

In Victoria, the local police don't like it but there aren't any provincal laws or municipal by-laws that make it illegal. Other municipal police (Vancouver, etc) may have by-laws, but as far as I've been told (from police), it's not illegal. (just don't tell anyone what you heard) ;)

If you don't need a "brand new" scanner, your best bet is a used PRO-2004,5,6. This will cover everything you would want and will eliminate selling a new scanner at some point if you want to upgrade to full coverage. They can be found on this newsgroup.

I have lots of Federal law enforcement frequencies programmed into my scanner and I never hear anything on them. (I live by a major city.) Are FBI, BATF, Marshalls, DEA, ect. encrypted? Does anyone else monitor activity on these freqs. or am I just wasting channels?

If these transmissions are encrypted I find it ironic that the FBI is doing everything in its power to ban encryption of public email for which it has no key and yet it will not allow the public to monitor its own transmissions.

You could look it up in any library. When I was in fourth grade (1976 - 77, the Internet back then was known as the ARPANET that linked military, scientists, and university computers at that time), I did a science project on the atom bomb and how it was composed and even made a drawing of "Little Boy," aka the Hiroshima Bomb. I just looked it up in books and encyclopedias. That info has always been available since the late 1940's at least.

Back to the service manual issue, I'll try to see if I can get one at my local Radio Shack to verify this. It wouldn't surprise me to see the FCC tell Radio Shack not to sell them, but I'd like some confirmation myself. RS caving to the government, the evidence seems to be there since not one of their new handhelds covers military UHF.

Welcome to Amerika, my friend....

Chuck, just some thoughts....

That's more evidence supporting my assertion! By the way, the "several" newsgroups you posted your commercial scanner advertisement to was 30! This is just the first example of Jason's idiocy when it comes to numbers... Further, my response is just going out to 6 newsgroups that I can relate to the issue, and not all THIRTY that you spammed once again with your idiocy.

> It's a well known fact
> that some hams if not most hams are active listeners to scanners. By posting
> this message to several RADIO related newsgroups, a header gets put at the top
> of the article, pointing out that there are potential undiscovered newsgroups
> that people can explore.

Silly me, I thought you were just trying to widen the audience for your commercial posting. I didn't realize you were doing it to help educate the ignorant masses! What a great humanitarian you are (cough cough)! Extending your (IDIOTIC) logic, you 'should' have posted your advertisement to all newsgroups, and thus expose millions to the radio newsgroups!

> Now... let's do some math.

Oh goody, although I'll point out to our audience that I was more annoyed with your spamming the 20+ radio groups, than I was with any pricing matters.

> The price was listed as $480 CDN (TAX INCLUDED).

You're wrong. The price was simply listed as $480. The only clue that you're a Cannuck & that your pricing was in Canadian dollars was your VE callsign -- period! I did assume your $480 price was in Canadian dollars, which is why I used "U$" when mentioning the best price I've found the BC-235 for. Your post didn't indicate it included tax, either. You can't even get your own 'facts' right!

> Remove our 15% Taxes (8% for PST, 7% for GST) and the base price is $417 (+/-).

Uh, I'm no mathematician, but when I subtract 15% from 480, I get 408... ??

> $229 US is $320 (+/-) CDN.

To interject more REALITY into your world, it comes out to about $314.42 using the 7 OCT 97 exchange rate. I know the rate varies, but I'm starting to wonder if you're either horrible at math, or 'cooking' your numbers a little...

> We would then pay $30 US for shipping which is $42
> CDN.

Oh really? Looking through the current Grove Enterprises catalog, their rate for shipping the BC-235 to Canadian addresses is "$14 Canadian UPS" or "$12.50 Canadian APP."

> Now, Tim, I think all you need to do is look in the mirror and you will clearly
> see WHO THE IDIOT IS.

My home does overlook Canada across the Detroit River, and I can see the reflection of Canada in a mirror, Jason. Beyond that, I have no desire to see you. Your very own postings are quite reflective of who the idiot is, and your feeble attempt to deny your idiocy is yet another ugly example which proves my case!

> Jason Miles, VE3TYG
> BTW, I thought hams don't slander other hams...

Hahaha, you sure don't read the newsgroups or listen to the HF bands much, do you!!

772. BOYCOTT RADIO SHACK !!!

Newsgroup: rec.radio.scanner
Date: 1997-10-08 00:00:00 UTC
From: electro149@aol.com
Message-ID: <19971008231101.TAA24693@ladder02.news.aol.com>
Source record: 183804

Don't just stop buying scanners from them- don't buy ANYTHING from them!

Freely post mods to this newsgroup.
Freely share schematics.
Buy from other sources, just DON'T buy from Radio Shack!

OR, mess up their loss prevention program. Buy something from them, then take it back for a refund. They will hate it. Those are losses to them, and they have a loss prevention program.

> Yes, that is the point. Think of the positive comments that would have
> been generated if they had "bent" their policy for this customer -

"Positive comments" aren't always great. What if they are founded
on a shaky premise? Most of Corporate America, for instance, has
a lot less interest in YOU and their employees and a lot MORE interest
in your wallet, credit card balance, and bank account.

So all those "positive comments" are kind of playing into the
wolf in sheep's clothing, don't you think?

Whatever happened to plain old HONESTY and TRUTH? Guess it
hurts too much.

> even if the customer was at fault.

Unless the vendor is to be master, then when the customer is at
fault, he should take his licks....same as the vendor should take
his licks when he's at fault. Therein lies the basis of a 50-50
deal where each can walk away from the deal.....happy and not at
the mercy of the other.

> In retail, there's an old addage about
> the best customer being one who was angry or upset with the "store" and
> who was satisfactorily treated and became a loyal customer.

That doesn't mean Retail is the good guy. It only means they're
doing some obscene sucking up in favor of the almighty dollar.
There are a LOT of loyal slaves....'er, customers out there.....

> It's easy to be a good vendor when everything goes well.

Likewise, it's easy to be a good customer when everything goes well.

I still contend that in a truly honest and free market where
QUALITY is to be high and PRICES to be low, that the responsibilities
of the customer are in no way overshadowed by those of the vendor.

In other words, 50-50 is as good as it gets for the whole. Anything
different than 50-50 means one is good only at the other's disadvantage.

Think about it.

Think about this. Say you and me play poker and I skin you for
a cool thousand. It might be said that we both had fun, but in
no small way, fella, you LOSE. Same if it were the other way around.

However, if we break even and no one loses, then we both win for the fun and enjoyment and comradrie..

Buying and selling is....or should be....along the same lines. If one loses at the gain of the other, then the deal is no good.

IMHO

774. FS: Uniden SW Receiver

Newsgroup: rec.radio.scanner
Date: 1997-10-08 00:00:00 UTC
From: Andrew Rosengarten <andrew@tropicom.net>
Message-ID: <343C3DB7.8BA70A38@tropicom.net>
Source record: 183806
Cross-posted to: rec.radio.shortwave,rec.radio.swap,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc

I have a portable Uniden Communication Receiver CR-2021. This receives 150khz-30mhz AM/FM/SSB/CW with a narrow & wide filter. This radio is digital with digital memories. It is in average condition and works well. It is missing the battery compartment cover in the back, the Light on the display cannot be turned off, and the internal speaker does not work, but if you plug in headphones or an external speaker it works fine. It has 6 memories in each mode and I have the original manual. The DOM was 1984.

I bought this from a friend of mine who was selling a recently deceased ham's shack. This would be great for anyone who wants a beginer or a spare Shortwave radio receiver. Its all black plastic with a working antenna and has a nice carry handle with AC power cord and can be powered by DC.

I thought that for $30 it was worth while to see what SW was all about. I decided that SW is not for me and my wife does not like the long antenna that I strung through the house. I had my 3 months of listening fun and now I'm done.

To anyone interested the price stands at $30 + shipping.

If you want any other information on it please email me directly andrew@tropicom.net

alucke@juno.com writes:

-Kevin, your callsign tells me you've been a ham for a number of years.

22 years... but who's counting..

-I'm having trouble understanding your lack of understanding in this
-whole matter.

No, I understand more than you think but my reasoning has, for the
most part, is either being ignored or is going over most people's
heads.

-First, to hook a cliplead onto a wire is an obvious
-trespass against the owner of the wire so that's why law enforcement
-needs legal permission to do so.

Yes, I pointed that out in one of my first posts on this subject.
One COULD (if he wished) do this but it is illegal. There was
a time when it wasn't illegal.

<snip -- yes we know that there are lots of older pieces of
equipment capable of receiving cellular/cordless phones
but that is irrelevant to my point.>

You, as well as everyone else on the anti-legislation side
of this argument have ignored that it is ALREADY against the
law to listen to a cordless phone or a cellular phone
conversation. Both of these devices are what are considered
point-to-point communications devices. That is a transmitter
that is designed to communicate with a specific receiver or
set of receivers. A cordless phone handset is designed to
communicate with a specific receiver, the base. A cellular
phone is designed to communicate with a specific set of receivers,
the cell control sights. It has been illegal to intercept these
transmissions for almost 20 years now. This all came about
because of the proliferation of small microwave pay-TV stations
back in the early 80's.

Your comments are based on a liberal, licensious society's
idea of "I can so I should so I will" mentality. Just because
you are able to do something doesn't make it right to do it. You
say that the burden of privacy is on the individuals in the
conversation. Then why isn't the "burden of thieftom" on
the victim? Why is it against the law to steal a car if
the keys are in it? Why is it against the law to take

a candy bar from a store shelf? After all it is right out there in the open where I can get to it. Same mentality as your argument "well the radio waves are traveling through my house so I should be able to intercept them." You will say that stealing a candy bar and violating someone's privacy have nothing to do with one another. But in violating someone's privacy is just like stealing from them. But you'll say that it isn't. Well here's a non-tangible. Let's say you give out private information about someone. That's just as wrong as taking private information from someone without their permission -- right? The only question is the method of theft. Did you do it by reading their mail? Already against the law. But then why? It is right there in the mailbox where I can get to it....

You see there are already many laws on the books to protect a person's privacy. These laws are adapted and evolve to fit the current technology. Before telephones there were no wire-tapping laws because there were no wires to tap. Now that some telephones don't have wires there must be new laws to protect those phones from "wire tapping."
It is a real pity that laws like this even need to be passed. You'd think that being unethical would be enough to stop it. Ethics? what are those?.....

You should hear something. I live south of Los Angeles & there is lots of activity! Yes, mostly business hours. Are u trying 162 - 168Mhz, 170 - 174Mhz, 406 - 420Mhz. Somewhere in there u should pickup something. There are certain freqs u should load in depending on your area. But I wouldn't load up a lot of channels for Fed unless the scanner was dedicated to that.
Don :-)

->
-> Can some (or one) of you more "in the know" (which is basically
-> anyone besides me!) enlighten me as to what it takes, hardware as
-> well as software,
-> to decode POGSAG if in fact this is possible with a scanner.

A small circuit to 'condition' the signal (best if taken from the discriminator of the scanner), and an open serial port on a 386 or better, with any of several decoder programs.

All this is academic, if you're in the U.S., since it's illegal do decode pager signals here.

I really can't believe you are an attorney. I would think you would be
in favor of free speech and having access to information.
I also can't believe you're not able to see the whole picture here.
It's really not just the "scanner" laws in question here.
I believe there is a subtle yet systematic effort on the governments
part to limit our abilities to defend ourselves not just from foreigners
but from
our own government.
This starts with a simple law that seems not to have any real importance
to the general public and then becomes amended and bastardized to something

that now affects us all.

Suppose you might want to ask Bill Cheek, if he would have been able
to come up with all the modifications he has for scanners (and I'm NOT
talking about any mods which allow the scanner to be used for picking
up "banned" frequencies) if he had not had access to the schematics.

I'm sure that some of the mods he has, might have been accomplished
without a service manual, but I'm sure that a service manual and
schematic certainly made the job much easier.

do have some points to make about your post as well.

> RS execs made a decision that apparently is not
> popular with you. You should be filing suit against the Federal Government
> for violating our civil liberties...

If, as you suggest, the decision was one which Radio Shack execs made
on their own, willingly, what grounds do you have for suggesting that
the original poster file a civil liberties lawsuit against the Federal
Government?

If the decision was Radio Shack's alone, then the only thing he could
legally do (being a sensible person) would be to boycot and/or speak
out against Radio Shack for their own policy.

If the decision by Radio Shack was forced on them by the FCC, then it
is up to Radio Shack to file a suit against the Federal Government.

AFAIK, IANAL, there is no case which we could file as a third party
on behalf of Radio Shack being denied their First Amendment rights.
All we can do, is to make the public aware of the situation, and
through such awareness, hope to convince Radio Shack to fight for
their own First Amendment rights.

But, before we can work to make the public aware, (beyond letting them
know that there is something fishy smelling in the deal) we must know
what the true facts of the situation is. If we claim that the government
"forced" RS to stop selling the manuals, and it turns out that it was
a coporate decision, then where is our credibility?

>Barring that, learn electronics so you
> won't need a service manual!!!

Folks who "KNOW" electronics would rather work with a schematic than
without one. Folks who think they know electronics, might not care.

One could *try* Radio Shack, and with a bit extra perseverence, possibly
be able to purchase the service manual for that scanner. (one lawer [sic]
claims it is possible)

>It has a fried resistor, right where the "charge" plug is and I need to
>find out what size so that I can replace it. (along with a few other
>things).

Does this resistor physically trace to the two center contact connections
for the charge jack? (one side to the plug contact, the other to the
leaf switch which is open when the plug is inserted)

If so, then this resistor's value is probably not all that critical. It
is probably there to limit the charge current sent to the rechargable
battery pack. (the end of the resistor connected to the disconnected
portion of the jack, should also trace back to the battery.) You could
probably replace this with any resistor which would limit the charge
current to a level of 1/10 the AH capacity of the battery pack... so if
the battery is a 500mAh, select a resistor to limit the rate to 50 ma.

Placing a millimeter inline with the test resistor should be a simple
way of deteriming a good value, but be sure to monitor the current at
a state when the batter is discharged, as well as when it reaches full
charge.

>Also,
>It scans fine, but does not seem to receive
>anything.????????????????????????????????

Do you get audio out of the speaker, such as white noise, keypad beeps,
whatever? (Sorry, I can't be of any real help here.)

>Could the resistor by the charge plug be the cause????????????

IF the resistor is part of the charge circuit, as I suggest above, IMO
it is not the cause of your receive problem.

>My gut feeling is that they are two seperate problems.
>Visually, everything else is fine. including all of the antenna wires and

>solder joints.

If the scanner has a "reset" button for the CPU, you might try that, BUT
NOTE, this would possibly reset any frequencies programmed in (although
I assume that is of no concern to you yet, as you haven't been able to
use the scanner yet.)

>One of The-Powers-That-Be

You are trying to be absurd but in your absurdity there is a bit of
truth. The FCC has the authority to regulate ALL electromagnetic
radiation, this includes light. There was a case here in Texas where
a person built a laser radar jammer for his car to defeat the new
police laser radar. He was charged with and convicted of the following
charges:
Speeding -- he was doing 75 in a 60.

Interference with a police officer in the performance of his duties --
he was jamming the radar.
Malicious interference with a radio transmitter -- he was using
an infra-red laser to interfere with a laser radar transceiver.
He was transmitting with a wavelength of 935 nM -- a frequency of
320,855,615 MHz or 321 Tera-Herz (THz). Technically this is within
the jurisdiction of the FCC. The FCC doesn't generally regulate
frequencies above 300GHz but it does have the power to do so.

I have an AOR AR1500 handheld scanner for sale. It covers .5-1300mhz continuous with no gaps (including cellular). Also it receives AM,FM,NFM,CW And SSB...Upper and Lower. It runs on a ni-cad battery pack (I have 2), 4 AAA batteries or a wall plug, and also comes with the rubber antenna and case. The scanner is in EXCELLENT condition. Origionally it sold for $500.00. If you are interested...E-mail me with an offer.

Thanks,

Bryan Young

791. Question: cordless phone security?

Newsgroup: rec.radio.scanner
Date: 1997-10-09 00:00:00 UTC
From: Bob Wilson <bwilson@stop.spam.com>
Message-ID: <343D0CCC.FD2@stop.spam.com>
Source record: 183667

I've been asked this by colleagues and am turning to you experts for info. I understand that it is extremely easy for analog cordless phone conversations to be picked up, including the newer 900Mhz analog phones. What about the digital and digital spread spectrum 900Mhz phones; how secure are they from intentional scanning? No phone can be considered completely secure, I assume, especially if you're broadcasting a signal through the air, but what are the relative safeguards of the digital technologies?

Thanks for any info--please reply to the newsgroup.

If you don't want me to hear it, do it on a land line! You are free to listen to me when I use my cordless, because I didn't want it heard by people like me, I use a wired phone!, or my DIGITAL Erricsson cell-phone... I know the latter isn't foolproof, but it's pretty safe for now.

What a bunch of lame excuses. I know you wouldn't wiretap someone's phone lines. What makes you feel that building an illegal scanner to spy on their conversations is any different. Sure, their signals have invaded your home, and they are doing immensely damaging things to you, and your only defense is to listen to them. GET A LIFE! Better yet, get a CB. Those guys want to be listened to, and it's legal.

Why would anyone trust Radio Shack, a company that tries very hard to make
the public think of "cellular phones", when they hear about their "Family
Radios." Not a practice from an up front and truthful company.

>that's super accurate? For the price of one of the ZEIT clocks you could buy a
>GPS unit. Two toys for the price of one... ;-)

All GPS receivers know the time to sub-microsecond accuracy internally -
it falls out of the navigation solution that they have to perform.
However, only some board-level GPS receivers have an output that is
synchronized to that time. For example, the Garmin GPS 20 has an output
signal that is usually within 1 microsecond of the beginning of each
UTC second. Other manufacturers have (more expensive) receivers that,
in certain modes, give about 50 ns accuracy.

But the cheap handheld GPS units do *not* provide this accuracy. Their
LCD display of time can be up to a second off, and the NMEA serial data
output generally isn't synchronized to the correct time either.

On the other hand, you can get GPS time just about anywhere that you have
a decent view of the sky. WWVB propagation is not that good.

Have the following radio radio gear for sale/trade. All are in very good cosmetic condition and are in perfect working condition (as far as I can tell). Buyer pays shipping. Will consider trading for shortwave receivers, scanners, CB's, etc. Please e-mail all offers and trade offers.

Cobra 23 Plus Mobile CB-
COMES WITH: 40 AM Channels, LED signal strength meter, LED channel display, 3 NOAA Weather channels, handheld electric microphone, owners manual, TX/RX indicator, mounting bracket, volume, squelch, channel selector, schematics diagram, built in speaker

Kraco CCB-4007C Mobile CB-
COMES WITH: 40 AM Channels, instant channel 9, mounting bracket, owners manual, optional PA feature, handheld microphone, volume, squelch, channel selector, schematics diagram, TX/RX indicator, LED Channel Display and built in speaker

Cobra HH-35 WX Handheld CB-
COMES WITH: 40 AM channels, full 4 Watt power (as far as I can tell), antenna, 3 NOAA Weather channels, built in electric microphone, TX/RX indicator, LED channel display, volume, squelch, channel selector, built in speaker, original box, owners manual, batteries, wall outlet battery charger, cigarette outlet power cord

Cobra Trapshooter 3 Radar Detector-
COMES WITH: signal strength, mute, dim, city feature, detects K-KA-X bands, volume, built in speaker, owners manual, cigarette outlet power cord, windshield mounting bracket

PRO 2026 Base/Home Or Mobile Scanner-
COMES WITH: scan, monitor, 100 memory channels, priority button, lock out, manual, volume, squelch, delay feature, owners manual, mounting bracket, home stand, built in speaker, original box, frequency coverage at 29 MHz at the lowest and 956 MHz at the highest (30,000 frequencies)

I think there is a lot of conjecture going on here and too many people accept it as gospel.

I called Radio Shack today (1-800-THE-SHACK) and ordered two service manuals.... for the HTX-202 Amateur Handheld and the Pro-2045 scanner.

Now, neither one of these products are known to be modifiable to do anything other than what they were designed to do, so there won't be any "special" info in the service manual.

They took my order as a matter of fact (they asked if I was a store or a customer, and I told them I was a customer), gave me the prices, total, and shipping schedule.

If I get a phone call from them backing out of anything, I'll post it. Otherwise, I was treated as they always treat me and they took my order.

Is anyone sure this isn't just another masterful piece of flame bait? Is this "ban" restricted to those older models that CAN be modified in some way that the FCC deems evil?

Methinks we know everything but the facts!

This is done on a subcarrier, sometimes using spread spectrum. Generally
you can only use this between buildings on the same transformer since the
high frequency will not pass through the transformer. Examples of products
using this are wireless intercoms, wireless phone line extenders, BSR
control modules, etc. There are standard IC's for these applications,
Philips is one manufacturer.

I have programmed in several different federal agencies with similar results. Chances are that you have the wrong channels programmed in. The best bet is to start with the frequencies you have and then search that part of the spectrum in 2-5mhz chunks. If you hear what sounds like static, the comm you are hearing is encrypted. Sometimes those channels carry in-the-clear transmissions too. Do this for a couple of weeks and keep a log of what you get. This is the best way to find active federal frequencies.

One agency that I don't even attempt to monitor is the FBI. I have a friend that works for them and she says that the FBI is required to be encrypted at all times (I think I have heard them in the clear ONCE in my 3+ years of monitoring them). Plus, each FBI region has a group of frequencies allocated (these regions span several states) which has to be changed each time a radio is lost or stolen (which happens almost daily, she says.)

As far as actually dedicating channels to the feds, I personally don't because the freq's change so much, and you can't make out most of it anyway. When I want to listen to them I just use the search function of my scanner.

Also, most Federal agencies are a 9 to 5 operation, so if you want to log repeater frequencies, this is the time to do it. Any other time, they use unit to unit tacticals which have a very limited range.

Another thing to try is to go to your local ham shack or spy shop and get a copy of Tom Kneitel's Top Secret Registry of Federal Frequencies. Most of the sensitive agencies data has changed, but the freq's listed gives you a place to start looking. And, if you live near a military base, the freq's for it are in that book.

As an extreme measure, if you have a frequency counter you can take it to the closest Federal building, but that could have you answering some uncomfortable questions later! (Try it at your own risk)

Hope that helps,
-Phil

I may be wrong, but I believe that the older ATT Digital Spread Spectrum 900 Mhz phones like the ATT 9300, that I use, and the current Lucent Digital Spread Spectrum ones, are the Frequency Hopping type. 173 seperate frequencies are what the literature says.

Another consideration is battery life. I have yet to see a GPS that runs for more than a few hours on penlight batteries, but the cheapo Radio Shack WWVB clock I bought last week runs for <N-yet-to-be-determined> weeks/months on 2 AAA cells.

Also not all GPS units will work indoors w/o an expensive ext. antenna.

My RS clock seems to be picking up WWVB sufficiently well in the SF Bay Area CA, and the WWVB web site says there are improvments planned that will make the signal even stronger.

I don't have the # handy, but they're in Lenexa (Park?) Kansas. I've purchased several items from them over the past couple years via mailorder. Never had to test their customer service by returning anything...

I called them last week & they advised $279 for a Uniden BC-895, but at the time they didn't have any in stock, so on Monday I ordered one from R&L Electronics (Hamilton, Ohio). It was $289, and with FedEx shipping, the grand total came to $297.94. I received it less than 48 hours after ordering it from R&L.

This is an interesting view - considering what [we] do here
(basically eves-drop).

My speculation is that someone came up with the concept of cellular
phones. Sometime during the design phase, some engineer informed the
marketing group that the cellular calls could be received by someone
with a scanner, and that the callers will be pissed. The marketing
group said "screw everyone - we'll let them fight it out".

Basically, imagine a construction company building houses, but not
putting up doors - then, when the homeowners get cranked-off at
strangers wandering thru their house, the construction company
says it's not their fault. :-/

I'm not aware of one myself. But, I must admit it sounds like a good
idea!

I've come across a Website where some guy even sampled the sound of his
hot rod's engine!

I'm in the biz so I can pretty much identify anything I hear but for a
hobbyist it could be quite useful to be able to identify stuff like
POCSAG, ACSSB, 1200bps data, Shepherding, 5-tone etc.

Any takers?

Of course, this stuff does not belong in the radio newsgroups since it
it totally irrelevant. Unfortunately, there are some people who have
very poor judgement. When they get excited by their mental masturbation
over these unrelated topics, they are so pleased with themselves that
they decide they have to expose their stupidity to everyone else.
It is simply disgusting for them to publicly parade their idiocy.
In addition, you will note that they often cannot write grammatical or
coherent English. Fortunately, since this is an unmoderated newsgroup,
we can also heap all the ridicule upon them that they richly deserve.

When I use Manual Search in 2VFO mode, and search up, my scanner skips the last frequency! This can be easily seen by running the squelch full open and pressing the up-tuning button. Tuning down does not have this problem.

Has anyone else experienced this?

Also, when typing in a frequency directly with 1/2 step turned on, the initial entry "correction" seems to ignore the 1/2 step parameter. For instance, if I'm using 200kHz with 1/2 step (i.e. tuning on 104.1, 104.3, etc) and I enter 104.1 and hit enter, the radio tunes to 104.0 or 104.2! If I then use the dial to tune, the problem is corrected.

Again, anybody else see this happening?

One more...

Again I had 200kHz 1/2 step, and manually tuned the dial below 100kHz and... guess what? The scanner locked up! The display stayed lit, even when I turned the unit off! To fix, I had to take out one of the batteries and reinstall.

Anyone else?

Wes

Steve, the letters I posted were actual contacts with RS personnel.
Wayne of RS told me that the FCC "asked" them to stop allowing
customers to have schematics of scanners.
I wrote a letter to Wayne and the president of RS about this very
issue and how it seems to violate the First Amendment.

If RS holds true to the requests of the FCC, maybe we can file a suit
against them and take this issue before a jury to decide!

No it's not John. Not even in the ballpark. You are an enormous puss filled boil on the butt of rec.radio.scanner John, and I am merely a speck on it's hip.

> I have e-mail from you admitting that you intentially say things
> to provoke because you think it is fun!!!!!

Please post the entire E-mail John. Not your usual little snippets. I believe though you are referring to the e-mail a couple of years back where I wrote another user, not you, that it was kind of fun to watch you react to everything? I was commenting on the art of trolling John, and as to what a hungry fish you are. Not only that, considering how many times you have been caught, you take the hook again so easily! About 130 times in the last month. You growing gills yet?

> You are an ASS.

Possibly. You have proven that one person feels that way, you. Woohaha, as if I care what John Mackey feels about me. In your eyes the whole world must look like one giant ass.

> You also have NO integrity. Just a week ago you told me to stop writing
> you as you were threatening to complain to your ISP to block the
> e-mail.

and I quote my E-mail, after receiving your unsolicited drivel, " Keep me out of your little psychotic triads. If you have any questions talk to sprintnet about their terms of service." Golly John, that doesn't match what you said. What's new, it's you saying it. John Mackey is not associated with truth and reality. Hey even the polls showed it! What did the count end up being John? 35 people against 0 for John Mackey.

>Now a week later you are responding to my e-mail.

What are you talking about? A week later I was responding to the r.r.s. resident fool in public. It had nothing to do with your strange rambling E-mail. When I said I was done playing your silly ass game, I was done.

> > Yes, your above thoughts actually have some true meaning to them but

>
> Here I am trying to complement the guy for his efforts to
> change the errors of his ways & you are trying to kill it.

I imagined that was how you would interpret it, Saint John!

> Do you remember all the crap he caused in rec.radio.swap about 2 yrs
> ago?

No? I recall commenting about Joe Reaves selling stuff out of his store on the net but not identifying it as being such. You then went into your patented routine. Did I post 130+ times last month and not one of them was scanner related? Geeze, wrong again John. Ouch!

> > OTOH, I would love to be wrong.
>
> That's good because you usually are wrong.

Even if that were true, I was right this time John.

> > Are you getting ready to change your ways John?
>
> More importantly Glenn, are you getting ready to change YOUR ways?

Why is that more important John? Your gripe with me is over two years old. I have never in all my years on the internet posted 130+ times on one news group, all off topic. You did it in the month of September John.

No I could tell you to shut up John, but 50 others before me have proven it to be pointless, you will never shut up. Can I prove it John. Yep, over 130 times. Not a single post in your defense. NOT ONE John!
How come John? Everybody hate you? Sure seems like it!

FISH ON!!!!!

Lotsa luck. It is NOT illegal to listen to cell phone conversations. It
is only illegal to disclose them to a 3rd party. If you recall a while back
the big flap about someone taping Newt Gingrich's cell phone conversations
and even publishing it and selling the tapes.
They were in blatant disregard of the law - but because they were big
Clinton supporters, they were never prosecuted. Now, if such an obvious
case was never prosecuted, how much do you think the average casual scanner
dude is going to worry?

:
:I didn't say I was expecting privacy from such an unsecure medium. I am
:not naive, stupid, or lacking in common sense. What I'm saying is that
:it isn't ethical what people are doing with scanners. And I hope that
:they get caught & are heavily fined. IMO, such people deserve such
:treatment. There would be a LOT less people invading other people's
:privacy if the laws were enforced. The way the FCC is handling amateur
:radio pretty much indicates the enforcement we'll see (unfortunately).

Hate to burst your bubble, but it is NOT a matter of "building illegal
scanners"
The law only covers sellers and manufacturers from SELLING them (except to
the government.. hmmmm). There is no regulation covering any modifications
by the end user. Neither is there ANY regulation covering the use of a
down-converter so that you can pick them up on an unmodified scanner.
Not to mention that there are 100's of thousands of pre-rule scanners that
work just fine, and are totally legal.
And another quirk in the stupid law is that it only covers SCANNERS - if
you have a continuous coverage RECEIVER, such as the fancy Yaesu that cover
the whole spectrum to 2 gigs, they are 100% legit to sell.
Stop looking for a nanny at the government - the law is totally
unenforcable and was passed for purely political reasons - and the FCC
testified to that effect before congress.

John,

I presume the last remark was directed at myself and not at the other party whom you now choose to attack. I will simply point out that it is in error and (rather charitably) assume that this si the result of a hazy recollection on your part and not a deliberate and malicious attempt to defame me.

If there was one lesson that might ahve been gleaned from my experience it is that this sniping and name calling (even when done in fun - and YOURS is not!) is destructive and a continuing abuse of the newsgroup and (I gather) the net as a whole. Take some advice: let it go. Forget about having the last word. Enjoy the hobby, NOT making other hobbyists miserable!

Steve's got a possible point here.

It could be the potentially modifiable scanners are on the FCC/RS 'hit list'

I tried the same thing today, but for the Pro-2026 Service Manual. 1st I tried the local RS, their POS computer resulted in a "Not Available - Restricted" for RSU# 10822963 (Pro 2026 Service Manual). I also called 1-800-THE-SHACK and tried to order it from there. Same result. I asked the quite friendly lady to find out why. Her response was from her supervisor "Our legal department made it so".

Anyone have a Pro-2026 Service Manual they wouldn't mind photcoping? Or even just posting to a web site or something? If RS/FCC are gonna make it difficult for legitimate users to get a hold of - let's make 'em ALL public so even the broke 'wannabes' can find 'em.

Nope - it's true. You just managed to get in "under the wire".

I was down at the local shack trying the same thing, today. No dice. Their POS terminal returned "NOT AVAILABLE - RESTRICTED" and had an "N" for Stock Available. Droid tells me that means they can't get it, even if they wanted to.

I also called the RSU order line (1800-THE-SHACK) - when the lady told me it wasen't available, I asked her to find out why. She came back with what her supervisor told her. "Tandy Leagal made it so"

Since you DO have one of these - I'd be very happy to get a copy! Email me if you're interested in helping me out here.

I have never seen such a diverse range of conspiracy theories in all my life! Here's how I see it:

Firstly, one can determine from the material that was sent to Bill Cheek and others that Radio Shack (aka Tandy Corp) is not being forced to withhold this information, rather someone at the FCC has allegedly asked that they stop issuing them. (per Tandy, not me) . This makes it a corporate decision. And why would a corporation decide anything? Because the decision will make or save their shareholders' money. That's priority one, whether your company sells potatoes or aircraft carriers.

Look at it from a financial point of view. It makes perfect sense:

According to Tandy's Annual Report I found at www.tandy.com, they did a total of 6 billion dollars in sales and revenue last year. The report also says that Radio Shack makes up roughly 50% of Tandy's revenue, about $3 billion dollars. Communications makes up 25% of that, or about $750 million.

Now the communications sector sells more than just scanners and service manuals. They sell CB's, ham radios, toy walkie talkies, cell phones, cordless phones and corded phones in all shapes and sizes as well as replacement and new antennas, cables, connectors, books and God knows what else for some or all of the above items. Let's assume scanner sales make up 10% (probably a generous estimate) or $75 million annually.

Now, how much of the $75 million dollar buyer base buys service manuals? To make $75 million dollars, you would need to sell 300,000 scanners at an average cost of $250 each. Even if 1 out of every 100 scanner buyers orders one (again a generous estimate, I'm sure) at a cost of $50 each (I don't know the actual cost, if any, but follow me on this) thats a grand total of $150,000. Nothing to sneeze at, but in the corporate world, this is peanuts. And we haven't even started talking profit here, this is revenue. I doubt that Tandy sells enough service manuals to make a $1000 profit.

So now we know how to cut some fat, but how do we keep the 1% of our scanner buyers from getting pissed off? Some public relations pee-ons probably said that if Tandy says that the FCC doesn't want them printing these manuals, the scanner community will bitch at the FCC, not Tandy. So they ask the FCC if they would like it if Tandy no longer printed these manuals, who naturally said yes, we'd like that very much. So Tandy saves some effort and the feds are happy as clams.

Brass tacks: Tandy is not going to go broke if they stop selling these manuals. If anything, it will save them money, even if that 1 in 100 scanner buyers goes elsewhere.

Seems pretty obvious and straight foreward to me!
-Phil

Sean, you really need to rethink this. It is not difficult math. You buy something priced at $417.39 and pay 15% tax. A 15% tax on $417.39 is $62.61. What's the total you pay? It's $480.

Sales taxes are calculated against the PRE-TAX amount, not the AFTER-TAX amount. So it's just a little 9th grade algebra (which I even _gave_ you) to work it backwards if someone tells you he's included 15% tax and the after-tax figure is $480. Come on! You buy stuff and pay sales tax all the time, don't you? Surely you know how this works. Why is this so difficult?

73,
Doug KD1UJ

SCO, So when you are shouting "good morning" to your neighbor across the
street, is this a private communication when I can hear it next door?
Keep your private communications out of my receiver, and your privacy
will be respected as much as possible.
As far as rights being "violated," as best as I can figure, the only
right we have left is the right to remain silent. This is because
anything we say or do can be used against us in a court of law. 73,
N0iMD

The answer is simple.....Hit Tandy/RS where it hurts! Don't buy there products.
I never buy any Ham or Scanner gear if the seller/manufactuer won't supply a C/diagram!
It normally means the gear is crap and the manufactuer does not want you to see how bad it is.

Kevin, your callsign tells me you've been a ham for a number of years.
I'm having trouble understanding your lack of understanding in this
whole matter. First, to hook a cliplead onto a wire is an obvious
trespass against the owner of the wire so that's why law enforcement
needs legal permission to do so. Radio signals, which not only pass
between the desired devices to enable communications between
individuals also pass through yours and my property and our bodies for
that matter. Now consider all the receiving devices that have been
manufactured since radio has been around. As an example, I'm sitting

here writing this and also glancing at a Sony TV made during the early 70's which receives UHF channels 14-83. Guess what? It receives cellular phone calls. At a flea market a few months ago I saw an old police radio which covered the frequencies between 40-50 Mhz. You know what? Any person who purchased that radio can pick up cordless phones. I'm also sure you remember those little UHF converters that adorned the top of almost all tv sets in the 60's. That's right, sports fans, they also receive cellular calls and up till a few years ago they were a dime a dozen at flea markets and garage sales. I own several scanners, 2 of which cover the 800 Mhz. frequencies. One has the cellular frequencies blocked (RS PRO-46) but it still picks up the images in the 900 Mhz. range. Oh, one more thing; My cordless phone works well enough that I can sometimes hear neighbors conversations if my base unit is switched off! The point of all this is that there is absolutely NO possibility that a cellular or cordless phone call can EVER be private with all these (in the hundreds of thousands) devices still in operation. Now consider that the average individual has about as much knowledge of all this as I do of quantum mechanics (I don't even know if I spelled it right) and you begin to understand that the burden of privacy should be on the participants of the conversation. Even if the legislation succeeds, do you think your neighbor will even be aware if he listens in on your telephone conversation that he is breaking the law? If he travels the highway and like most of us drive 5 to 10 miles above the speed limit (yes, that is a LAW to; the law is the law, remember?) do you think even if he did know he would care knowing his chances of being caught were almost nothing? Providing he isn't dumb enough to tell you, which he won't because of the embarassment it would cause you both, he can't possibly be caught. That's why this is a silly piece of legislation that should be gathered up & put where it belongs: in the TRASH!!! By the time all the aforementioned devices have found their way to your local friendly stinking landfill, this type of communications will most likely be obsolete. Let's pay our congresspeople to do something useful, not draft laws that are unenforceable and useless to boot. You know we've fought wars for freedom and I believe folks like you, well-intentioned no doubt, are forgetting that fact. You want privacy? You can have it! Send the police to every house and search/confisicate weapons, scanners, radios, tv's. Impose a dusk to dawn curfew NATIONWIDE! No exceptions, everyone in after dark! Hire 10 times the present number of police to enforce all this? You want to be safe? You want secure cordless phone calls? It's attainable, you know. Just how many of your rights and freedoms are you willing to sacrifice??? Let's wake up America!
Al

All,

I called Tandy media relations today, and they had heard nothing about service manuals and schematics being withheld from the public. This does not mean it's not happening, and the person I spoke to promised to check it out and let me know tomorrow (it was quite late today when I called). I also called Uniden, but they did not return my call. I'll be checking with the FCC tomorrow. I'll let you all know what I find out.

My expreience has been that in the Province of Ontario, when importing a scanner from the US, the only additional fees imposed by the Government are 7% GST on the CDN $ value of the scanner plus a $5.00 handling fee for the postal outlet for handling the transaction. There is no duty on imported scanners from the US!!

I've bought two scanners this way (BC9000XLT & HS200) and saved myself considerable $ compared to buying locally, even after converting from US to CDN $. True, I would have to send them back to the US for warranty repair, but I was willing to take the chance, and so far no problem.

Just my $.02

(If replying by E-Mail, remove the "x" from my address)

1) Bothering them at home is not something I'd suggest.

2) Don't you think you ought to find out WHAT you are complaining about
first, before you protest?

CHOOSE ONE or at most, two
- FCC conducting government censorship
- Radio Shack too wimpy to fight government censorship
- Radio Shack bending over for the Feds voluntarily
- Radio Shack passing off a corporate decision as government intervention

I disagree with your tactics. RS execs made a decision that apparently is not popular with you. You should be filing suit against the Federal Government for violating our civil liberties...Barring that, learn electronics so you won't need a service manual!!!
We who listen should continue to keep what other folk may deem "sensitive" to ourselves. The idiot(s) who sent in intercepts to the Secret Service have screwed everyone...
The true Intelligence Professional keeps his/her findings quiet..no boasting of who or what they intercepted. The more the ignorant outsiders know, the more oppression we can expect to suffer in our hobby.

Good. I find this whole thing to be just a bit more than I care to
believe without a lot more documentation than I've seen so far. The
facts of what the Feds are trying to do to us is bad enough, without
getting distracted with unverified rumors and pointless witchhunts.

I could care less about listening to wireless phone conversaations,
but it is amazing how patently naive people like this poster are as to
the total lack of any assurance of privacy can ever exist for radio
signals that are unencrypted. They forget that there are thousads
of existing scanners that were made tat don't even need modification
to receive the cell frequencies. They forget that there are millions
of scanners and receivers that exist which can be used to receive
cordless phone frequencies. These people seem to think that passing
a law will actually stop those that want to from listening.
Talk about a lack of common sense.

Personally, I'm still waiting for verification of this latest rumor.

I'll be contacting a friend of mine, who happens to be an RS retail manager - see what the skinny is on that front. Many of them are in Texas just now for some type of Manager Training in preparation for their 'Golden Quarter'. He's due back Monday.

I also have these freqs. in my scanner and with the same results. Unless
they changed their freqs. or I have the wromg freqs. to begin with. But I
can see where some of these transmissions need to be encrypted for some of
these agencies as sometimes an agent's or CI's life might depend on it.
Still it would be neat to hear some of what's going on.

849. multicomm2000

Before buying my AR8000 I searched dejanews and saw a lot of people asking if multicomm2000 (http://www.multicomm2000.com) was any good. I didn't see any helpful responses to several requests.

I'd just like to say "They have really cheap prices, were pretty nice, and didn't rip me off."

My costs were as follows (in UK pounds):
AOR AR8000 255.00
AOR CU8232 84.26
shipping (USA) 20.00

The scanner shipped right away, and the serial interface shipped about a week later when they got them in. It all got here, and I'm happy with it.

**********Just made a recent price drop!**********
I have a Uniden Beartracker BCT-7 mobile/base scanner that I am selling;
$100. Just got it a little over a month ago. It is a great scanner with a
unique feature that searches Highway Patrol Car's "Mobile Extenders" then
giving a warning signal within a 3 mile radius. It also has thousands of
pre-programmed channels for all 50 states (including fire, weather, police,
DOT, CB, etc). Also has 100 free channels. See the www.uniden.com web page
for a complete description of this scanner. EMail me at:
messig@orion.it.luc.edu
if interested.
Thanks,
Marty

Can some (or one) of you more "in the know" (which is basically anyone besides me!) enlighten me as to what it takes, hardware as well as software, to decode POGSAG if in fact this is possible with a scanner.

Thanks in advance,

Mike

Well, we know (I know) that on the in-store POS computer, when the
service manual number for the Pro-2004 is input, back comes a screen
which lists the price as something like $15.99 and the word "RESTRICTED".

I also know that when the RS droid mentioned that it was "unavailable",
he casually added "as of last week". I am told (by that droid) that
"RESTRICTED" means that the item "is not in the warehouse."

In an attempt to find out further information, I sent the following
letter to Radio Shack Media Relations (and a CC to a media type)

==========
From: tweek@netcom.com (Michael D. Maxfield)
Subject: Radio Shack's new scanner manual policy.
To: fmcgeh1@tandy.com (Fran McGehee, Media Relations Senior Manager)
Cc: bernie@bernieward.com

October 8, 1997

To whom it may concern,

Yesterday I paid a visit to a local Radio Shack store to check
up on ordering a service manual for a Pro-2004 scanner. I found
the manual listing and copied its part number out of the Radio
Shack Unlimited catalog.

The store clerk entered the item number into the POS terminal and
told me that the manual was no longer being sold, "as of last week".
The POS screen showed an entry of "RESTRICTED". When I asked the
store clerk what restrictions were applied to the manual, I was told
that it meant the item is "not in the warehouse." A second and third
reiteration of the question of "RESTRICTED" failed to elicit a more
detailed response.

Rumors abound right now, on how the FCC "requested" that Radio Shack cease from selling the service manual, but yet one response I have seen, attributed to a response to a letter sent to Radio Shack Customer Relations states:

"We at RadioShack prefer that you have access to schematics, but the FCC asked us and Uniden to withhold them."

followed closely, with:

"we are not withholding the information voluntarily."

This gives me the impression that the FCC is conducting illegal government censorship, which you are protected from, through the First Amendment of the United States Constitution. If such is the case, then it would be in your best interest, and that of every citizen of this nation, to make widely known, the issues and circumstances involved in this situation.

On the other hand, if the FCC merely asked Radio Shack to consider the possibility of ceasing the sales of scanner service manuals, and if Radio Shack made it's own decision to do so, then Radio Shack is doing themselves a disservice by alluding to the request from the FCC as the reason they are "forced" to halt sales.

What disservice is Radio Shack doing themselves, if this is the case?

- The image of Radio Shack not having the backbone to stand up against the government for the fundamental rights protected in the First Amendment.

- The lack of any backbone to accept any responsibility for their own corporate decision to abide by the FCC's wish.

- The willingness to outright lie to their customers so as to make it appear that Radio Shack is on the customer's side in opposition to the FCC's request.

I guess, what I am asking is, did the FCC send a request to Radio Shack, Uniden, and/or Tandy, and order them to cease sale of such service manuals? Did the FCC simply "request"? Was such a request given in a threatening "or else" manner? Did Radio Shack willingly cease sales of these manuals, or did they feel that there was no other option open to them? If Radio Shack willingly made the corporate decision to cease sales of these publications, why all the subtle and not so subtle hints that it is the fault of the FCC?

Sincerely,

Michael D. Maxfield

853. Help!!! need schematic for Pro-31

Newsgroup: rec.radio.scanner
Date: 1997-10-09 00:00:00 UTC
From: James Collins <james.collins@awaiter.com>
Message-ID: <01bcbcfe$22e55060$11c10ece@awaiter>
Source record: 183743

HELP!!!

I just received a non-working pro-31 and am about to attempt to make it a working Pro-31.
I am in desperate need of the schematic for the scanner.
It has a fried resistor, right where the "charge" plug is and I need to find out what size so that I can replace it. (along with a few other things).

Also,
It scans fine, but does not seem to receive anything.??????????????????????????????????

Could the resistor by the charge plug be the cause?????????????

My gut feeling is that they are two seperate problems.
Visually, everything else is fine. including all of the antenna wires and solder joints.

I'm Open for suggestions as to what I should start looking for the problem.

Thanks to everyone who is able to offer some honest suggestions on this one.

854. HELP: Discriminator output on BC200XLT?

Newsgroup: rec.radio.scanner
Date: 1997-10-09 00:00:00 UTC
From: gordonj@usa.net
Message-ID: <343cb326.15236909@news.abs.net>
Source record: 183744

I'd like to tap the discriminator output on my Uniden
Bearcat 200XLT handheld scanner. Unfortunately,
without the service manual, I have no idea where to tap...

Or, if you don't have this info, do you know of a device
which will allow me to decode MDT and POCSAG
directly from the audio output of above scanner?

Thanks in advance for your help :-)

Gordon J.

Hello Dave: Yeah there are quite a few bozo's on CB. But the secret to enjoying CB Radio is to find a group of guys that you like. They will probably want to have coffee somewhere and you can join in and meet these guys. Thats how I have enjoyed the CB radio.

The local 2 meter crowd, is the same way.

In Baltimore City

$20 million approved for phase two of radio communication system

The Board of Estimates yesterday approved a $20 million expenditure for the second phase of a planned 800-megahertz radio communication system for the fire, police and public works departments.

The money will be used for engineering, design, training, programming and construction of a communications center and a computer-aided dispatch system. Last year, the board approved $16.6 million for phase one, which included construction of broadcast towers and purchase of radio equipment for the Fire Department.

Total cost of the project is estimated at about $65.7 million.

With all the books and websites devoted to scanner modification...who
needs the schematics from Radio Shack anyway. I have 4 Radio Shack
scanners (1 I've had for 14 years) and they all work flawlessly. I have
had no problems with them so I too will still do my business with them.

408... ??

You're right: you're no mathematician. (1-.15)*480 does equal 408, but
that's not the way to calculate it. It's supposed to be:

x * (1 + .15) = 480
x = 480/(1 + .15) = 417.39

The percentage tax is figured against the original, not the final amount.

All,

While I have not been able to confirm that Radio Shack is restricting the sale of its service manuals and/or schematics, I have been able to confirm that the FCC did not ask Tandy and/or Uniden to stop selling service manuals and/or schematics to the public.
Julius Knapp of the FCC's plans and policy office told me this morning that the FCC took no such action.
I'm still waiting for a reply from Tandy and Uniden. Stay tuned, but right now I'm guessing that the "letters" allegedly from Tandy officials are hoaxes.

Looking for used scanners.

Unit can have any number of channels - hand held or base - older units or new (no crystal units). Must work flawlessly, have original accessories, and be in reasonably good cosmetic condition...original carton and manual would be nice, but not necessary.

Please describe the scanners features, operating condition and appearance in your reply..

Thanks,

John & Robert
St. Louis, Mo. 63116

P.S. We can also trade ham gear instead of paying cash - if you're interested in a swap, inquire for list of equipment available.

Hey, it's easy! You just pass a law that says it's illegal to look
inside. Then noone will ever do it, right? Hey, want to buy a bridge?

It is times like this that we as free Americans should help each other out and retain our freedom. If somebody posts a request for a mod or service manual, help them out. In the meantime, DON'T buy ANYTHING from RADIO SHACK!

Christmas season is coming soon. Now is the time to find other sources of quality electronic equipment. Go the extra mile and buy from someone else.

What is a keyboard trick?? what would a keyboard trick do???

879. RE: REC RADIO DATABASE

Newsgroup: rec.radio.scanner
Date: 1997-10-10 00:00:00 UTC
From: Andrew <andrew@tropicom.net>
Message-ID: <343E53F2.BC0EF6D3@tropicom.net>
Source record: 183519
Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

I have often wondered how most people can be so trusting when dealing with perfect strangers on the internet. I myself am a cautious person by nature. I have been screwed by stores, mailorder houses etc. So far I have had very good luck selling some of my ham stuff on Rec.Radio.xxx Newsgroups. I realize there are more good people trading here than bad ones, so don't take this in a negative mannor. I was wondering how many people would be interested in my idea.

I was thinking about creating a Web Page just for us Ham Rec Radio swappers that would benefit Ham/Rec Radio Swappers. Here is my plan.

To have a very short and concise either FTP or WWW site that would list a persons name, trade, date, and references (past dealings with) and a short summary of whatever anyone who delt with that person would like to say about his or her trade (short and to the point). All information would be voluntary and all information would be posted as to who said what. This in a very short time would become a database of people you could look up and check out before dealing with them. You could even e-mail their references to verify them.

Here is a possible sample:

John Doe jdoe@anywhere.com XD4111 Last Updated 07/14/97

Jane Doe,radio1@pc.net.uk,XD5333 - I sent $500 for a Yaesu FT-8500 and it was everything he said it would be, it was sent out on time and I am happy. 7/97

Sam Muttle,smuttle@y.com,XD5555 - I sent $45 for an Icom W2A that was supposed to be in 100% working condition when I received it it didn't work, he worked with me to get it right and now everything is OK. He's a good man and I would deal with him again. 7/97

Jane Doe radio1@pc.net.uk XD5333 Last Updated 10/10/97

Paul Had,phad@gg.com,XD4442 - I sent her a check for $200 for a Yaesu FT-50 that needed some work, after sending many e-mails, regular mail and telephone calls, I still have not received my stuff! I would never deal with her again. 8/97

Harry Whit,hwhit@yup.com - I sent her a US Postal Money order for $550 for a Yaesu 757 that was supposed to be brand new in the box with all paperwork. What I received was a 757 that had many scratches on it and

an old really beat box with a torn manual. The radio also did not function properly. She refused to return my money and I would never deal with her again. 9/97

All of the above info of course is made up, but this should give you an idea on how my mind sees it. I think that all of us could really benefit from a database like this. It would be up to all the posters to send me mail in a specified format (I would have a submit form to fill out) and I would put this into the database at least every other day. I have no idea how many people would contribute to this, nor how much the expenses would be on my behalf, but I would be willing to donate my time for free and people could send in donations to pay for the Web Costs involved. There would of course not be a mandatory charge for the service. I have no plans to offer this to any other news groups. This is just to benifit us hams, and Scanner traders or anyone else who uses the Rec.Radio.xxxx groups. No Commercial business or reference would be allowed, no slander, no bad carma, and no abusive language, whatever is posted whether it be positive or negative will be the responsiblity of the posting author who sent it to me.

I would like any input on this idea that you have. Please post all response to the "REC.RADIO.SWAP" newsgroup so we can all get involved Put in Subject to your post; "RE: REC RADIO DATABASE". If you have any private ideas you can email me directly.

This site has not been formed yet and based upon your response, is whether it even will.

Good luck to all on your swaps.

Andrew

Ted, lighten up dude! I don't think you're his priest or his dad.
He's simply asking for information. If you don't want to contribute,
then don't. But should you be attempting to guess his motives or preach
the law or morals to him??? Seeking information is not illegal and as
far as I read, that's all he's doing. Take a pill, shash it down with a
cold beer and relax....

Oh, and not to mention he said his intentions were NOT to clone a phone...you blasted him for wanting to.

I just got one from the Ham Station (800) 729-4373. It's a custom fit soft leather case much like the Radio Shack cases for their scanners. The case does not cover the keys, display or belt clip (RS cases have a belt clip on the case itself). It works for me. I guess whether you like it or not will depend on how rough you are with your scanner.

There's nothing wrong with honesty and truth. I did not suggest that anyone should be other than honest and truthful. Did that get twisted or what? My point is that the customer may, occasionally, make a mistake. I feel that the vendor should have some tolerance for human error. There is a difference here where I would agree that no special consideration be given if an individual continues to abuse the favors of the vendor by asking him/her to bend the rules.
The vendor should have the final say, not the buyer, but sometimes we all make mistakes. If you sell something to me and the terms are agreed upon, I have no recourse but to ask for special consideration if I feel I should be able to return the product against our agreed upon terms. I don't have a right to complain. I do have a right to state, however, that I am unhappy with the deal.
I'll be happy to continue this conversation privately as I do respect your opinion.

Regards,

Ric Mackie

In rec.radio.amateur.equipment Andrew <andrew@tropicom.net> wrote:
: I have often wondered how most people can be so trusting when dealing
: with perfect strangers on the internet.

Only the unwise are trusting. There are as many crooks on internet as anywhere else (including stores).

The wise shopper can lower the odds on a deal especially a ham deal. The call sign address better match the home address of the seller and buyer.

The phone number, name and address better match the above.

Work phone number can be verified.

I can go on and on. If you are an easy chump you will be taken advantage of so better stay in your basement and hide (baw haw haw). If your a tough cookie you are less likley to be a mark. If it does not smell good - try another fish.

I have bought and sold on internet and NEVER had a problem.
Request a scanned image. Ask very specific questions about damage, wear etc.

Its no differnet with new equipment. The add only tells the good news. You really have to use internet newsgroups to check the true good and bad points. I point out that prior to these news groups we only had magazine reviews which were very easy on the manufacters. Rarely critical even with a glaring problem. So thanks to Internet we can get much more info and questions answered form actual users.

I make sure I know who I am dealing with as outlined above.

Actually it doesn't bypass the law. The law (ECPA) prohibits lstening
to cellular (and more recently ordless) regardless of the actual
equipment that might be used. Even using an old UHF TV to
listen is a violation. The violation is the act of
listening, not the equipment. There are other FCC
regulations which do prohibit the manufacture and or
importation of cell capable scanners.

>That is the point! If you don't encrypt, then expect no privacy.

I don't think this is good enough. Don't expect privacy if you are talking over airwaves. Certain encryption may or may not be crackable, but it still goes over the airwaves to lots of people.

>If I tell you I have a scanner capable of cell phone (or cordless)
>reception, what can you do to stop me from listening?

Nothing, unless you are dumb enough to tell him where you live and if you admit to listening to Federally controlled frequencies. A phone call to the FCC would probably ruin your day.

>
>If I tell you I have a scanner capable of cell phone (or cordless)
>reception, and I use it to listen to your cell phone conversations,
>how would you know and then PROVE I did so?

By your own admission in writing, duh.

>
>If I tell you I have a scanner capable of cell phone (or cordless)
>reception, and I use it to listen to anyone's cell phone
>conversations, how would the FCC know and then PROVE I did so?

Again....by your own admission.

If you don't think so, why don't you put it to the test for us. You seem pretty confident that nothing will happen. So...test it for us will ya? Tell us where you are, tell us that you are listening to cellular right now and see what happens after someone places a call to the FCC or your local police.

Since when is it impossible to be guilty until proven innocent? Seems to me that you'll be the one PROVING you weren't listening to anything illegal.

Don't get me wrong, I listen to this stuff too whenever I feel like it. BUT, I'm not about to tell you anything about me that you don't need to know. I'm not going to jail for something stupid like that. I don't have the time or money to fight something like this. If you do, I think that's great.

First of all, there is nothing illegal about cloning a cellular phone.
Also, the originator said that he had no interest in doing that anyway.

As for stalking. Nobody said anything about stalking anyone.

STOP and think is what you are about to do worth
> five
> to twenty five years in prison depending which state you are from??

What a right load of bollocks.

Absolute and total nonsense. I think you will find that if a recorded
conversation is to be considered "admissable evidence" at least ONE of
the parties on the recording MUST be aware, at the time, that the
recording is being made.

One more thing. The fella didn't even mention if he was a resident of
the USA. The last time I checked the Internet was worldwide. Your
stifling radio laws are just a joke up here in Canada.

I think you read too many magazines.....8-)

Tell ya what, how 'bout you get me a Service Manual for my Pro-2026, RSU#10822963. If YOU can get one for me, email me and I'll buy it from ya.

I did just as you suggested here, the POS terminal returned "NOT AVAILABLE - RESTRICTED". Stock Available marked as "N" - droid tells me that means he can't get them at all. His suggestion was to call the 1-800-THE-SHACK, I did - same result. I asked the gal to find out why. Her 'supervisor' stated that the 'Legal department' did that.

Seems timing is a big deal here. I've heard guys say they've had no probs on 7 Oct, and others say they were locked out by 8 Oct. I tried mine on 9 Oct - too late.

Hello. I'm looking into getting a Uniden BC9000XLT. I would like the radio to come with an antenna (not necessary), the owners manual, and anything else it originally came with. I would like it to be in perfect working and cosmetic condition. I'm not interested in buying one, but I will trade the following for one:

Cobra 23 Plus Mobile CB Radio
PRO-2026 Mobile/Base Scanner
Kraco CCB-4007C Mobile CB Radio
HH-35 WX Handheld CB Radio
Cobra Trapshooter 3 Radar Detector

If you would like more information on the above pieces of radio equipment let me know. Please in your e-mail let me know what comes with the scanner and what condition it's in. Thanks for reading!!!

Gordon,

Here is an excerpt from a file written by Bill Cheek that I downloaded from
KC5KTO's Radio Page (http://w5gb.nmsu.edu/kc5kto/mods/baseband.txt):

SCANNER DISCRIMINATOR CHIP PINS OF INTEREST

CKT
RF-in SCAN AUDIO
SCANNER NFM CHIP TYPE SYMBOL Pin Pin
BASEBAND
=============== =============== ======= ===== ===== =========
BC-200XLT TK-10421M-2 IC-401 20 16 11

FYI - Pins are numbered down the IC in order from left to right like this:

------v-----
1 -| |- 6
2 -| |- 7
3 -| |- 8
4 -| |- 9

5 -| |- 10

There is no way for you to decode MDT from your earphone jack because of the audio filtering done between the chip and the jack The filtering limits you to about 300 baud, MDT is sent at 4800 baud. However, it is a fairly simple matter to drill a small hole in the case and install a second earphone jack, connected to the audio baseband pin and the scanner's ground. I have an old PRO 2026 that I have done this on, no problem.

Also if you are trying to build the POCSAG decoder circuit from plans found on the net BE WARNED: There is a design flaw in the schematic which will cause the circuit to fail when power is applied. I have a friend who is building a real working circuit for me, I'll keep you posted if you are interested. For now, the best option is to buy the official unit. The URL for them is: http://www.pervisell.com/ham/index.html#Demodulators

Nonsense! This has been done for decades by college radio stations that
use the power lines to transmit AM thruout the dorms and campus.

Generally
> you can only use this between buildings on the same transformer since the
> high frequency will not pass through the transformer.

A capacitor is placed between the phases to get the RF between phases.

They did this before ICs were even invented. Would you believe they
used TUBES?!? Worked great, but the rules have since changed.

No, I see what the point to his post was - why spend $100 on something that is only worth $40?! I also had to do a little shopping, and now I have the infamous RS frequency counter. I must say, it's not the greatest freq counter in the world, but with a good RF amplifier and antenna, it will do the job I need it to do.

As far as RS employees being ass-pains, I see his point there too. Allow me to elaborate. I had the following conversation with a RS employee yesterday:

Me: "Do you still carry the old frequency counter?"

RS: "Yes! I have it right here"

Me: "No, this is the new one. Do you still have the old one?"

RS: "That's the only one I've ever seen."

Me (suspicious now, maybe this IS the old one.): "How much is this?"

RS: "$99.97 plus tax" (who comes up with these prices???)

Me (getting tired of this): "No, that's the new one. The old one is on clearance for $40"

RS: "No, they shouldn't be THAT low"

Me (I wanna slap this guy. Can I?) "Yes it can. Why don't you look it up?" I point helpfully to the computer screen.

RS: "OK!" Looks up part # 22-306 "$99.97 plus tax"

Me (Stop it Pinky, or I shall have to hurt you.) I look away for a moment and think "Happy Thought. Happy Thought." Then I turn back. "Try 22-305." I smile at him like I have had just a little too much prozac.

RS: (meekly) "oh, you're right. There IS an older one! Yup, $39.97"

Me: "Plus tax"

RS: "Plus tax"

After waiting for Beavis and Butthead (he was the manager, huh-huh, huh-huh) to call around, I was directed to one of our local malls, who had one left in stock, plus the display unit. Yes it was a pain in the butt, but I saved $60, so what the hell.

I think Rat Shacks' slogan should be:
"You've got questions,
We're wearing ties!" (big stupid grin)

Kevin Muenzler WB5RUE sez:

> it is ALREADY against the
> law to listen to a cordless phone or a cellular phone
> conversation.

Kevin, my dear, are you out to lunch on this issue or what?

In the USA, unless something has recently happened that would make major news, it is
*not_yet*_illegal_to_listen_or_view_any_frequency
of the electromagnetic spectrum,
regardless of who is talking,
or what type of device they are transmitting on.

You must obviously know that a law prohibiting listening, if ever enacted would be hopelessly impossible to enforce, or to prove action upon under present evidentiary rules. Most lawmakers (even the real outfielders such as the honorable Mr. Helms) would probably recognize this as a grave problem for the executive branch or the judiciary.

But as a radio operator, you already knew that. If you really believe what you said, and are not just trying to troll for the sheer energy of a quick and brutal response, then your lack of knowledge about this may be an indication of the general public's.

We deserve everything we get in the way of more repressive laws since we are hopelessly and massively naive about what is already law.

"Ignorance of the law is no excuse." ---said The Judge
"One can never know all the laws." ---said The Attorney

There is one for $100 US at the following web site:

http://www.trsc.com/4sale.html

You should contact him ASAP since at that price he's just about giving
it away.

From: SD <dout-sco@flash.net>
Message-ID: <61moapjae1@excalibur.flash.net>
Source record: 183551

Does anyone know is the BCT-12 is worth the expense. I don't really travel on the interstate that much.....just on the occastional trip. I am replacing an Escort radar detector that mysteriously quit working.

Also, I am having a hard time find a resource that can compare current models of radar detectors. Everyone seems to think that the Valentine 1 is the only radar detector to buy. Does anyone know where to find info comparing radar detectors?

Is it a mistake to purchase a BCT-12 to replace a radar detector? It would seem that they are totally different.

Thanks

I was discussing this service manual stuff
with one of my local RS contacts and he said,
"Ya know, a coupla months ago we got a memo
to return all scanners that go above 1000 MHz."
I then called a store manager and had him check
availability of the PRO-2042 and he said,
"I don't have 'em, and I can't get 'em."

Hmmm.....

I hate to say it girlie, but I think you're wrong here.
The ECPA, circa 1984, will contradict what you're saying.

Also, Muenzler's views generally represent technically
correct information. (Again, don't tell anybody I told
you.) [grin]

Personally, I think Kevin needs to spend ALOT more time working on developing his personal life rather than throwing his life away trying to convince everyone out here that anything he says regarding radio is correct.

However, that's just my opinion and you're free to take it for what it's worth.

C-Ya.

Eric,

The literature I have seen indicates that the cone is the equivalent of
counterpoise and it is connected to the shield of the coaxial feedline.
In other words, the counterpoise is not tied to earth. I see no reason
why one couldn't tie the shield to an earth ground at the radio and also
tie the center conductor through an RF choke to the earth ground as
well. Most radios are grounded in the shack, although the ground usually
isn't very good.

Regards,
Dave

johnp@harborcom.net (John Palinkas) writes:
>Is there a case available for the 235xlt trunktracker yet?

Funny that I got this message just after looking around for a case!
The bc235 uses the same case as the 220 and 230. The places I
called (Grove and the Hamstation) both have the leather case made by
Uniden for $30 and $20, respectively. The Uniden case has a slot for
the belt clip, and cutouts for keys and LCD.
What I am looking for is a leather case that has a clear
plastic section over the LCD, instead of a plain cutout. I'm more
concerned with keeping the LCD scratch-free since that's the only part
of the scanner that I really need to read from. I've seen these
types of cases for cell phones, and was wondering if anyone knows if
they are also available for scanners/radios?

Free? Or for cost of duplication?

I have a decent library of manuals, but I sure
can't afford to duplicate and distribute them for
free. Somehow, I doubt very many others can do it
either.

I have hi-res scanning and duplication facilities, but
even there, I have to pay someone to stand over the machines
for hours on end....just to make a text and graphics file.

<shudder> An awesome job.....just for love. Compensation
is what makes the world go round.

Fire up your browser and get on some search engines and chase some FM
circuits down. But don't get your hopes up too high. Many of the ones
going around have errors and omissions, or are just plain bogus.

For a starter, get on www.frn.net and follow some links.
When you get done with that, then come back and tell us what you found.

I have yet to see them in the libraries. They are in the Barnes and
Noble bookstore, tho, for a big fat price. I've seen the first three,
but not the later ones. The bad thing about these is that the circuits
are reprints of the original articles from magazines, etc. What is
missing is the original article, that tells what the circuit really does
or doesn't do, and explains what the asterisks mean.

Wow! This has far-reaching implications.
Was the FCC really involved?

If this was a state case...
Your car headlights transmit in this range, so you better not turn them
on in Texas. The marboro man better move out of the state, because a
cigarette transmits in this range also :-)

This was a federal case? Was it adjudicated?
What was the district?
Do you know the defendant's name or the name of the case? XXX v XXX
I'd dearly love to get a copy of this case!

Please let me know, Kevin. Thanks.

Yea, all you bleeding heart liberals are out there protesting when
some killer is put to death about how this is 'cruel and unsual'
punishment for this poor killer. Where were you when he was dealing
out his cruel and unsual punishment to some little six year old
child he raped and murdered, or someone he killed while highjacking
their car, why do you not protest that? I not only think they should be
put
to death, I think they should die the same way their victims did.
And since this is off topic for this NG, this will be all I have to
say on the subject.

The cell phones actually preceeded the sophisticated (and
inexpensive) scanners of the 80's to the present. Having said that,
I recall easily listening to ship-to-shore telephone conversations
as a youth in Long Island, NY with just my plain vanilla HF shortwave
receiver. Somewhere around 2.5MHz as I recall.

>Basically, imagine a construction company building houses, but not

Actually it is more along the line of a totaly glass house and then
demanding that no one ever look inside from the street.

> I then take this info and
>program it into a unit/device..similar to a scanner..

NO!!! This Burns my Britches!!! Everyone takes the
B.S. that the media puts out and takes it as Gold...
The Device is NOT a Scanner, DOES Not
RECEIVE Frequencies like a scanner does,
And Does not have a Speaker like a Scanner Does!!!
The Device to which you are refurring to is an
ESN reader which is used in the cloning of
cell phones...To Be able to follow a cell phone
call you need 3 things:
1)Computer, laptop or otherwise
2)Cellular Phone Tracking Software
3)Receiver that is capable of interfacing with
the Computer and software.
The Receiver listens and the software decodes
the Control Channel which lies in the 825-849Mhz band...
BUT unless you work for the Cell Phone company or
the Government and have a wiretap order, Doing this
is a Big NO-No!!
my 2 cents!

Just HOW do you expect such enforcement when any violator
has about zero chance of being detected? That is the issue.
In response to the obvious inability to enforce any "no listening"
law, the government tries to ban basic radio receiving equipment.

> IMO, such people deserve such
>treatment. There would be a LOT less people invading other people's

>privacy if the laws were enforced. The way the FCC is handling amateur
>radio pretty much indicates the enforcement we'll see (unfortunately).

Well, at least you see the futility of enforcement and it is
worth repeating again...
Just HOW do you expect such enforcement when any violator
has about zero chance of being detected? There is NO way for
the FCC to know if anyone is listening to anyone else. If you
think there is, please post as to how you expect the FCC
to do that...even if the FCC had the manpower and budget?

A while back there was an interesting interface that was called a
"DDI" that sold for about $200.00 with software.

It took the output from the scanner and fed it into the computer which
monitored the "overhead train" of the cellular control channel. You
programmed in the phone number of the desired "target" phone, and when
it was active, it sounded an alert, logged the entry (including phone
numbers dialed) and tracked the call by following it from cell to
cell. One could use a VOX tape recorder and compare it to the log if
let unattended. It worked very well, but I haven't seen it on the
market lately.

Hi

I stand corrected, I calculated using 17.5% sales tax as it is in the UK,
force of habit !

The pre tax amount is $417.39 ....

Been doing my VAT returns so 17.5% seems to come naturally ...

Cheers Sean ....

Douglas A. Hamilton wrote in message <01bcd4e0$e93d6910$51953ccf@intel>...

>withhold this information, rather someone at the FCC has allegedly asked
>that they stop issuing them. (per Tandy, not me) .

One notice allegedly from customer relations stated that Radio Shack
would prefer to sell us the manuals, but their hands were tied. That
message definately seemed to indicate something other than a corporate
decision... but let's go under the assumption that it is a corporate
decision made willingly by Tandy:

> This makes it a
>corporate decision. And why would a corporation decide anything? Because
>the decision will make or save their shareholders' money. That's priority
>one, whether your company sells potatoes or aircraft carriers.

That is their right, and it is: 1) The customer's right to complain that
they don't like Tandy's decision; 2) Our right to seek out the truth, and
if it is a corporate decision, chew on Tandy's ass for trying to pass the
blame onto the FCC; 3) If the FCC did "request" (force or no force), it
is also within our right to ask the Attorney General to investigate the
possibility that someone at the FCC violated some sort of constitutional
right, just by the mere activity of "asking".

If Radio Shack sticks to it's story that the FCC asked them, even though
Radio Shack made the corporate decision to comply willingly, I am
seriously thinking of bringing the FCC's "request" to the attention of
the Attorney General. (Not that Reno would do a damn thing... gotta
use the media for leverage)

The FCC has requested that all vendors and scanner manufacturers not
release schematics for scanner products that are offered. Radio Shack
is complying with this request. We regret we are unable to assist you
with your request.

Thank you,

It should have come as no surprise to any of us that RS is becoming more of a consumer electronics retailer, and less of a specialised retailer of radio gear and electronic parts. The first sign was when they blocked 800 MHz on their scanners. This was a clear sign that they would rather sell a cellular phone than a scanner.

Perhaps they decided to stop selling service manuals because their salesman were embarrassed that they didn't understand which component a person was asking for while trying to fix their scanner?

I assume that you are aware that since the law was written regarding the blocking of celluar frequencies in scanners that the cell band was enlarged? If not, this means that scanners block a certain band of frequencies, newer phones use these frequencies and more. This means a fully blocked scanner (i.e. one that can't have the blocked cell frequencies restored) can still receive cell frequencies! Besides, a simple down converter (a 400 MHz mixer and band pass filters) can shift the 800 - 915 MHz frequencies down to 400 - 515 MHz which most scanners can receive. The shifter can be built for about $40 and there are no blocks. The shifter works on the same theory as the down conversion found in LNBs. As a matter of fact, you can use a "simple" tv (one without all the mute, fine tune, quartz lock tuner) to tune in cell calls. These are found on the channels 69-83.

Have Fun

I worked for Radio Shack from 10/96-07/97- I am still close with the employees and executives and can tell you this. The only thing that I have heard about the banning of their service manuals are those of rumors. Go to your local Radio Shack look up the serial number ## -#### of your scanner, shortwave, or cb radio in the RSU (Radio Shack Unlimited) catalogs which are available for public viewing, fill out the RSU order card, and hand it to the person at the register who at that point will send out the order either by phone or US mail.

There are a number of things available from RSU that most people aren't aware of, for example, that rare, hard to find tube for grandpas old WWII receiver, night vision goggles-binoculars-and telesopes, software for IBM and Tandy computers 1980-?, video games for nintendo, sega, playstation, and gameboy, word processors-dictation machines, DJ setups, karaoke machines-tapes, Ramsey radio kits, crystals for Realistic and Bearcat scanners-cb's, and so on, and so on, and so on. I know for a fact that people think that "just because the item they want is not in stock or shown in the store catalog" that it doesn't exist "WRONG" its in RSU. The add-on rubber duck antennas for cb radios they sold in stores a few years back for $9.99 weren't discontinued, RS simply didn't get enough requests for them and are now available through RSU the same story applies to variable capacitors, cordless phone batteries and other items like that.

IF YOU DON"T BELIEVE ME
TAKE A LOOK FOR YOURSELF

First, yes I know it is illegal to do it (and I don't).

But, at our ham meeting last night we got to talking about the scanner bill that is in congress and to subject came up.

Now here is the question: Is it possable to hear both sides of a cell phone conversation on a single freq. I say no. Cell phones are full duplex, one freq. goes from the radio to the tower and the other frome the tower to the radio. Two of the people there said that in %90 of the time they can here both sides of the conversation. What is going on.

961. C628 operational manual

I need some sample *.WAV files of MDT signals
recorded straight from a scanner's NFM Discriminator
baseband audio output.

This is for someone who is developing decoder
software for an international product. I have
a full time 24hr high speed connection to the
Internet, so large file attachments are not a
problem. I can also high-speed FTP if anyone
knows a site that stores MDT signal files.

This is for a good cause if anyone can help.

YOUR NUTS!!!
Cloning a cell phone is TOTALLY illegal, GETTING CAUGHT STALKING SOMEONE is even more illegal.. STOP and think is what you are about to do worth five to twenty five years in prison depending which state you are from?? if it's your wife, try bugging her car, Its cheaper and safer. get a pearlcorder made by Sony and a good Omni-directional PRZ mic and tape her that way. for what ever purpose the one sided conversation is more than enough for a divorce... Or call a P.I.

You are correct in that they are full duplex. Some cell companies
transmit the user's forward voice channel back to them over the reverse
channel. If you scan the reverse channel, you would hear both. If you
get the forward channel, you'd just get the cell user's voice.

I discovered that fact some time ago. Never listened around much.
Best if you have an old fashioned rotary dial tuner.

The downconverter would seem to byppass the legality of using a scanner
on those frequencies.

The question would be moot. I probably wouldn't even bother to dig
into my scanners if I didn't FIRST have the schematics to guide me.
But then, I don't buy major electronic equipment if schematics
aren't available in the first place.

> I'm sure that some of the mods he has, might have been accomplished
> without a service manual, but I'm sure that a service manual and
> schematic certainly made the job much easier.

So much easier that I'd never have tried without the docs. I am not
a glutton for punishment....and there are plenty of other things in
life to do.....

Technical documentation is vitally important to the serious hacker
and technologist. It's about the ONLY way for one to understand the
theory and application of electronic principles.

I know the PRO-2004, PRO-2005, and PRO-2006 internally like the back
of my hand.....but I STILL continually refer to the schematics before
undertaking any serious design and rework. And my manuals are
worn out, literally. Good thing I bought spares for the files!

You might imagine the difficulty, then, for one who doesn't know the
beasts at all......

Whew!

I just thought of something. I have noticed that several Radio Shack stores have mounted cellular telephone antennas on the roofs of their stores, and connected AC power supplies to their demo cellular phones.

In the old days, the FCC rules defined a base station as a transmitter which had an antenna on a man made structure (if I remember right) and which was connected to the AC power (can't remember the exact wording).

Is it illegal for RS to be setting up cellular phones as base stations? Let's hear from somebody who is knowledgeable of current FCC rules about this.

True for the moment. However, as in everything else that bothers our
Federal officials, once they take a dislike to anything the process
slowly grinds away until that item is outlawed. I can easily envision the
possession of a scanner being outlawed within a few years.

I recommend you read the "Public Service" column in the October issue
of QST. Specifically, on page 93, there is a side bar column entitled "CW
- An Unfortunate Casualty of Technology". I won't belabor the point by
repeating the contents of this article here other than to say that the
article deals with the demise of CW among emergency organizations.
The fact of the matter is that it is much easier to train someone to
operate voice and computerized modes than it is to train someone to
effectively communicate with CW. I agree with your assessment that CW can
get through when other modes will not, but this is generally not a
problem for most emergency organizations who have multiple communications
systems at their disposal.
I don't want anyone to think that I am attacking CW as a mode. On the
contrary, I use CW often for DX'ing. I just want the record set straight
as to the current status of CW for emergency services.

The FCC is probably happy with any morse requirments as far as limiting
things. I think code is really neat and I got alot of pleasure from it.
I can understand resentment for no code from coders, but I have no
reservations for requiring any code today. Do they still require
code??

Go to the web page: www.perconcorp.com
They have an on-line database that you can search for "free", and
you can purchase a "hobby-level" CD-ROM for either the US or Canada
for about $30 plus shipping.

You can give Lowe a call on +44-1629-580800 for callers outside the UK or on 0800-174749 for UK callers....HOWEVER... if you have a PC with a SB16 (or equivalent sound card) look at site "http://www.tardis.ed.ac.uk/~kr". This has an absolutely brilliant freeware ACARS decoder which can write out a log file in the same format as the Lowe program thus saving you around ninety quid.

I'm a little confused, Lee.

Now, anyone will tell you I'm not a no-code tech license-class
supporter, but how exactly is the "cry-baby no-coders" not getting their
way causing a slow-down in the growth of amateur radio, since, by
definition, their licenses (in the US at least) are good for 10 years,
and the license class has only been around a little over 5?

>Now we need to read rid of the other cry-babies that are whining because
>people like me are standing up for their right to privacy. What makes

>Because of such people, I have to spend more money on technology trying
>to keep them from listening to my PRIVATE conversations rather than them
>behaving like decent people. I'm not the one that doesn't "get it".

Well, it pretty sounds like you don't. In a crowded stadium, you have
no expectation of privacy. So, if you're attempting to yell across the
stadium to a friend, don't expect your conversation to be considered
private. The same analogy holds true with unencrypted wireless
communications. If you want privacy, you have to take reasonable measures
to ensure your communication is private. That means using encryption
technology. If you don't, then there is no reason to expect that other
people -- with scanners, or who just happen to have fillings in their
head that resonate at the frequency you happen to be transmitting --
should hold your conversations "private". Would you use a local
2 meter autopatch to order a new piece of ham gear with your VISA card?
Should other people listening there keep your information "private"?
If not, then why is cell or cordless phone any different?

>I'd rather be a law-abiding citizen that has respect for others right to
>privacy. The point is, we can't live in anarchy. If that's what some of
>you want, go find yourself an island. All of you will probably be dead
>in less than a month without any laws.

The mere presence of rights does not automatically give you the authority
to exercise them. Yes, you may have right X, Y, and Z, but if you've shown

in the past that you are incapable of exercising these rights without hurting others or infringing on the rights of others, then you lose those rights. Cases in point: the right to vote and the right to bear arms -- both taken away from convicted criminals.

Something that few people have noted, because they are all stuck in their
own little agenda, is that there has been an incremental, "tiny piece at at
time" restrictions on more and more.
It used to be that actually blowing something up was illegal, now if you
know someone that read a book about someone blowing things up, you are under
suspicion.

Amor is just slightly confused. His logic in this arguement
appears to indicate that even murder is not legal unless you
get caught.

Amor,

"Getting caught" Vs. "Getting away with it" does not mean a difference
between illegal and legal. If I understand what you are trying to
say, it appears that you are claiming that it is legal to listen to
cell and cordless phones because the law is mostly unenforceable. That
doesn't make it any less illegal... that only mmakes it a stupid law.

Actually, if someone can't repair a crystal set, WITHOUT A SCHEMATIC or
a manual, they really don't deserve to be an electronic's technician
since they don't understand the first thing about electronics.

I don't see a parallel between code, and your analogy whatsoever. I
can see your arguement that lack of code knowledge doesn't mean a
person doesn't know how to communicate, but if a person can't
figure out a crystal set, I wouldn't even want that person repairing
the battery connector on my RS five transistor Flavor Radio. (Although
I might consider allowing them to replace the battery.)

And in California (one of the first states to outlaw cordless phone monitoring) a bill was recently signed into law which deals with capturing cellular serial numbers AND altering the serial numbers of cell phones in order to clone them:

==========
BILL NUMBER: AB 1127 ENROLLED
INTRODUCED BY Assembly Member Knox
(Coauthor: Senator Rosenthal)
[...]
SECTION 1. Section 502.8 of the Penal Code is amended to read:
502.8.
[...]
(g) For purposes of this section, "illegal telecommunications equipment" means equipment that operates to evade the lawful charges for any telecommunications service; surrepticiously intercept electronic serial numbers or mobile identification numbers; alter electronic serial numbers; circumvent efforts to confirm legitimate access to a telecommunications account; conceal from any telecommunications service provider or lawful authority the existence, place of origin, or destination of any telecommunication; or otherwise facilitate any other criminal conduct. "Illegal telecommunications equipment" includes, but is not limited to, any unauthorized electronic serial number or mobile identification number, whether incorporated into a wireless telephone or other device or otherwise. Items specified in this paragraph shall be considered illegal telecommunications equipment notwithstanding any statement or disclaimer that the items are intended for educational, instructional, or similar purposes.
[...]
537e. (a) Any person who knowingly buys, sells, receives, disposes of, conceals, or has in his or her possession any personal property from which the manufacturer's serial number, identification number, electronic serial number, or any other distinguishing number or identification mark has been removed, defaced, covered, altered, or destroyed, is guilty of a public offense, punishable as follows:
[...]
==========

BTW, the above law could have a serious impact upon those who
canabalize broken equipment and incorporate the parts into
homebuilt equipment. [I have not left in the parts of the
bill refering to that though]

I don't have to. Your response and your plea speaks volumes
about your position on the code issue and courteous HF operating
in general. Maybe you can get Carl or Coffman to explain it
to you.

Just another twist on using the power lines as a communications medium.

Technology: Electric Outlets Could Be Link To the
Internet

LONDON -- Engineers claim to have developed a breakthrough technology
that would let homeowners make phone calls and access the Internet at
high speeds via the electric outlets in their walls.
If the technology developed by United Utilities PLC and Northern
Telecom Ltd. proves commercially viable, it could transform power lines
around the world into major conduits on the information superhighway.
Because electricity flows into virtually every home and office the new
technology could give power companies easy entree into the phone and
Internet access businesses, thus posing a serious threat to current
providers of those services.

Both United Utilities, a power company, and Northern Telecom, a
Canadian maker of telecom gear, confirmed that their system was "ready
for the mass market," but declined to reveal details until a news
conference scheduled for tomorrow. A Northern Telecom spokesman also
declined to elaborate.
While the technology must still be proven on a large scale, the two
companies have tested telephone service over power lines in about 20
U.K. households over the last 12 months -- with positive results,
according to Alistair Henderson, chief of technology at Energis PLC, the
telecom unit of National Grid Group PLC, which owns and operates the
electricity-transmission system in England and Wales. Energis, one of
several power companies that has secretly worked with United Utilities
on the "power line telephony" project, hopes to use the system to offer
data services to its own business customers.
"It's very good news for utilities, indeed," says Mr. Henderson.
"Everybody has an electricity line to their homes, and every business
has electric supply. "At long last, the local monopoly of the incumbent
telecom operators is about to be demolished."
But some questions remain. Although United Utilities' initial tests
have been successful, technical and safety wrinkles have to be ironed
out. There's also likely to be intensifying competition from a host of
other wanna-be phone and Internet service providers, including cable
companies and outfits that use wireless technology to provide high-speed
access. And for the new system to be commercially feasible, a power
utility would have to sign up 40% or more of homes and offices in a
particular neighborhood, Mr. Henderson says.
This could prove a difficult task as existing telecommunications

players have proven to be adept at making life hard for new entrants. The Baby Bells in the U.S., for example, have largely thwarted efforts by AT&T Corp. and MCI Communications Corp. to enter the local telephone business.

In recent years electric utilities in the U.S. and Europe have been trying to enter the telecom fray by the more conventional method of stringing fiber-optic cables along power lines. But so far they've had limited success. As a result, utilities have waited for exactly this kind of breakthrough to make a big splash in the telecom wars.

While electric lines have been used before to zap tiny amounts of data between computers, their capacity has always been limited, making commercial applications unfeasible. Now United Utilities' telecom arm, Norweb Communications, has found a way to transmit data at a speed of more than 384 kilobits per second over regular electricity lines -- more than 10 times the speed of Internet modems used by most households with regular telephone lines.

The advantage of the latest system -- which uses cellular phone technology to transmit signals along electric wires -- is that utilities needn't spend vast amounts of to build new telecom infrastructure, since existing power lines can simultaneously transmit both electricity, and a phone call, say. Electricity doesn't interfere with the phone transmission for the same reason that a radio broadcast doesn't interfere with a simultaneous TV broadcast: the frequencies are very different. "Utilities won't have to touch the wires underground," notes Mr. Henderson.

Of course, there will be some cost to utilities that want to commercialize the new technology and enter the telecom business. Utilities will have to install a device in each residence or office to separate the electricity and phone transmissions. From the device, one line will deliver the telephone and Internet link, while the other will deliver electricity. In the case of the two companies' test, Northern Telecom is believed to have built the box that separates the power and data transmissions.

Does anyone know if the Chat room "Scanner Radio " is being used for Internet Phone. There is never anyone in it and I would encourage people to use it.

That is my two cents and if you are wondering which website to find it at go to http://www.vocaltec.com

There you go and I look forward to Chatting with ya'll over the phone.

Jim

Please use e-mail when replying.

I heard SCO (sco@sco-inc.com) say:

: As far as I know HAM radio is exempted.
: I am in favor of any bill that blocks the monitoring of "private
: conversations". HAM radio is not "private communications" ...
: HAM radio is on the public airwaves and can be heard by anyone with a
: radio that can tune the ham bands. Hams at my ham clubs are in favor
: of this bill's idea (I have not seen the actual bill ... just heard it
: talked about at our club meetings).

: W4SCO

: I am also a private pilot and communications on the aviation bands is
: also not "private" so it should not be affected either.

I'll refrain from reciting the parable of 'When they came for ?????, I did nothing'...

I agree that it would be nice if 'private conversations' were indeed private. However, it seems obvious to me that no amount of legislation will accomplish this glorious end if the 'private conversation' is being transmitted in an unencrypted format via radio. Making unblocked scanners hard to get or keep ignores the realities of the situation.

There are already many millions of radio receivers capable of receiving such 'private conversations', and potentially at least that many people capable of using them to listen in. Unless you confiscate all of these in a given area, your 'private conversations' simply aren't private. The very idea that a telephone conversation is 'private' is from the era of WIREtap laws, and has nothing whatsoever to do with radio.

In any case, such specialized receivers only make it _easy_ to violate your illusory privacy. It takes only a handful of commonly available components to construct a down converter capable of putting all these 'private conversations' within the range of very many more receivers, which means you'll need to confiscate that many more radios, many solid state devices and all the textbooks that might conceivably teach someone how to build such a thing.

No way, OM. Stupid laws make criminals of regular folks to serve special interests with more political clout. This isn't new, and is the favored scam of church and state alike, but only because people are, and have always been, incredibly gullible in the face of Authority.

Legislation predicated on restricting passive access to radio spectrum is a red herring designed only to foster the illusion of privacy for users

of obsolete analog cellular technology. Such legislation is technological protectionism pure and simple, and if you look hard enough, the soft-money trail leads back to corporate interests who stand to lose a considerable slice of the market if their customers ever realize how UNprivate their 'private conversations' really are.

Privacy is a technological problem, not a legislative one, beyond the decades-imposed restriction on how one may _use_ the information obtained from radio monitoring. However, factors within our government continue to insist that actual privacy must be regulated, and if necessary, even abrogated, in the public interest of course, so it would be prudent to examine closely any sort of legislation which claims to actually protect your 'right' to privacy.

Privacy over unencrypted radio channels is an illusion, selling it is fraud, and insisting it's achievable is a lie. A Big Lie, which is SO absurd that many folks never think to question it. A decade from now, or less, it probably won't matter, but in the mean time, there will be smoke and mirrors action of epic proportions.

John Frye (dedhamap@dedhamappliance.com) wrote:

: Other famous, or should I say infamous, governments have had some
: success in banning radio equipment. Specifically, the Soviet Union and
: Nazi Germany come to mind. Many years ago, in a history class, I recall
: reading references to a radio called a "Volksradio" which translates to
: the "peoples radio". Essentially, its reception was limited to those
: frequencies that the Nazis wanted their people to listen to.
: Though some may scoff, I see many parallels between the Nazi regime's
: telecommunications policy and current US telecommunications policy.

I have an article in my 1990 _Passport to World Band Radio_ that deals with governmental control of radio receivers throughout history from Nazi Germany, to the USSR, and to Red China. I think the "Volksradio" had only 3 tubes or something like that and was made to be "deaf" to lessen the ability of using it to DX foreign stations but for the most part that effort has failed. I also read a book that was written by a former German soldier called _From the Snowfields of Moscow to the Cornfields of Iowa_ by Kurt Willibald. There was a couple of references made where his parents used to listen to the BBC by keeping the volume of their radio so low that you had to put your ear to the speaker. When they were done, they had to change the frequency from the BBC back to the approved German station in case if somebody would lookat their tuning dial. Sort of reminds us of the debate on how you can make your scanner "have amnesia" at a push of a button.
Chuck, who hopes we don't get like that....

That's kind of silly. My point was that preservation of our rights and liberties should be done by focusing on the exact aspects of constitutional and civil law. Service manuals and radio, in general, do not have any legal precedents embedded in the Freedom of Speech as far as I am aware.

One good way to lose a right is to not know what you're talking about and thus be poorly prepared in the defense of that right.

No Amor, Kevin is right and it is you who are wrong!

Haven't you folks ever heard of the Communications Act of
1986? Surely you have. It was covered quite thoroughly
in Pop Comm and other radio magazines back then. That
law made it illegal to monitor cellular phone transmissions
and it was amended in 1992 to include cordless phones too.

No matter how you may feel about the enforcability of the
law or the morals of listening to people's private telephone
conversations, the fact remains that it is illegal none the
less.

1025. RCON V2 to control ICOM R8500

Hi,

I use RCON V2 to control my ICOM R8500. Is there anyone who uses the
same combination? I want to exchange some experiences.
Cheers,

Bob

Its your word against his. There is no proof in that case.

If you tell a federal agent, that would be different.

I think what is most unfortunate in your response is that you truly seem to believe that your communications over radio waves is much more privileged that police, fire, business, GMRS, FRS, CB, etc. You intially claim that you do not expect privacy over the air, but then try to paint scanner listeners as "unethical". For someone who claims not to have an expectation of privacy, your whining smacks of hypocrisy.
Would you expect privacy over a CB channel or a FRS channel? I doubt it. So what really makes cell phones any different, other than the system runs on a sophisticated network and you pay for the service. There is no difference.
In the end, people like yourself will destroy what has been an enjoyable hobby to some, a means of news gathering for the press and an important tool for those of us in public safety, such as myself, who use their scanners to respond to emergencies in our communities. Yes, not every community can afford individual radios for every cop, fireman or EMT.
I find it somewhat ironic that cell phone service has ignited another controversy in my area. So many people want cell phones that the phone company has had to implement additional area codes. As you can well imagine, the increased demand for cellular service has required the cell companies to increase their infrastructure. The problem is nobody wants to let them put up additional towers. Sure, everybody wants the service but nobody wants the baggage that goes along with it. Hypocrites--- they never cease to amaze me!

The truly ironic part of this whole flap is that the couple who
actually did the taping may indeed face a trial, and properly so. The
Florida congressman who actually turned the tapes over to the media, and
therefore also violated federal law, may escape punishment. This is the
ultimate example of "do as I say, not as I do" and typical of the
haphazard manner in which our government first crafts and then
administers laws.

On really sunny days when the sun is low in the sky and protrudes into
my front room window, I am unable to use my IR remote control on my VCR.
Who would I write to at the FCC in order to file a complaint against
old Sol?

Shit! While I can believe (possibly support the justification) the
charges of interefering with a police officer, I can't believe in
supporting FCC's "interference" charges.

Would the FCC become involved and attempt to prosecute if someone
created some sort of ultrasonic barrier device which caused a shifting
turbulance front ahead of the vehicle which acted to confuse the
IR signal? What if the ultrasonic signal was created by purely
mechanical means (no electricity whatsoever... possibly from an
air pressure pump on the drive train) and funnelled through an
accoustical waveguide toward the front of the vehicle?

NOTE: I don't know how possible it would be to cause a turbulance
capable of distorting IR (or light) by pure accoustical
methods... but we do know that atospheric turbulance does
affect light waves.

OUCH! You stabbed that one slightly off center. ;-)

IMO, WRT service manuals and the First Amendment... it is often cited that "Freedom of Speech *ONLY* applies to those who own the press", meaning that if youown the press, or have contracted for its use, you have the freedom to publish whatever you want (within certain guidelines concerning truth, libel, slander, etc). IF you desire to publish work of your own design, being schematics, manuals, photos, text or other, the government can not stop you... but you cannot force someone to use their press to publish your work... nor can you force someone to publish their own work, nor can you publish someone else's work if they do not authorize you to do so (excepting situations of Fair Use). IANAL, IMO

NOR can you prevent someone from reading some work already legally published, NOR can you force someone to read a published work if they don't want to... IMMO, that is about as far as the 1rst extends into "reading"... As you [Bill] state, I too don't see any First Amend concern with trying to read what someone won't publish.

BTW: For anyone considering putting the Radio Shack Service Manuals up up on the Web, or making copies for distribution, keep in mind that by not publishing or distributing them, the copyright holder does NOT!!!, repeat NOT lose their copyright interest in the material. IANAL, but I am quite sure that Radio Shack can still sue a person for copyright infringement, even if the material is no longer being published.

One other item... With regard to the Pro-20xx scanner manuals, is Radio Shack the only distributor of the manuals, or does the hidden manufacturer also offer manuals for the device?

You need to read the October QST. Despite the Tech no-code license, the rate of growth in ham radio has slowed down worldwide. The "cry-baby no-coders" aren't getting their way so they are leaving ham radio. Good ridence! CW may be an antiquated mode of operation but it's part of the hobby. Just like any other hobby, if you can't do it go find one you can do.

Now we need to read rid of the other cry-babies that are whining because people like me are standing up for their right to privacy. What makes such people think that they can "stomp" on my rights in favor of theirs? Because of such people, I have to spend more money on technology trying to keep them from listening to my PRIVATE conversations rather than them behaving like decent people. I'm not the one that doesn't "get it". I'd rather be a law-abiding citizen that has respect for others right to privacy. The point is, we can't live in anarchy. If that's what some of you want, go find yourself an island. All of you will probably be dead

in less than a month without any laws.

It's just bad legislation, and unnecessary.

Encryption is what ought to have been done anyway, and it still ought
to be. If there ever was a case for a non-government solution, this
is it.

Laws that can only be enforced intrusively are the last thing you want
to create.

I don't own and am not interested in scanners, btw.

Give it a rest guys: the IDIOT OF MACKERAL has a stink to him
that emanates everywhere he posts' to. That is a fact. You
cannot get an ISP on his ass because he is deficient of mind
and mind-stem. You cannot demand he be banned just because he
is suffering from his mother's dimentia at giving life to him.

Give it a rest guys: The Idiot of Smelly Mackeral has his frame
of reference in the net-world in rec.radio.scanner.

This is HIS Life. His meaning to be such an obtusive blunder-
buss of a zit on the net.

But it is his right. He is who he is. He am who he am.

HE IS and because he is who he is he is just one entry in the
morass of this group who you choose to read and take what he
says as "intellectual-bereavement" stimulating you to reply.

Maybe you should be reported to your ISP for responding on the
thread and not by e-mail. Might work too.

Mackeral stinks when left alone. So you know it. Why take
his emotional duress as an affront to your emotional duress?

Allow the dolt of the net to post as he pleases. he's harming
no one but HIM. Of course if you become stupid and read his
dementia then you have made a decision to be one with him. That

is not his fault. It was your decision.

Take responsibility for the decisions you make or don't make.

I have made mine: I no longer read what the Mackeral Says. I was sleep-walking when I got hooked by this post.

Now, grow up and make yours. Allow the Stink his corner and you yours. IF not, then you are no better than he is in making stupifying remarks fly on the retort or the beginning.

Make a decision that will allow you to go on and reply to those issues which enrich your life or not. If you continue to reply to the Big Stink then you are to blame. Not the mackeral.

So flagellate yourself and enjoy.

Others have and they enjoy the threads and the group because they make a decision as to "yes" and "no" when seeing the idiot of mackeral address prior to subject matter.

Be big and act big and the Mackeral will die of loneliness.

Now, back to being responsible.

Bill Conduit
etc.

Well the possession of a scanner is NOT in any way illegal
at all. Even possession of a modified scanner is legal.

Mike:

You are right...that's exactly what they do! But they work, because the car itself is not literary grounded to the ground...it sits up on four rubber tires,insulated from earth's ground. You can make one and try it by simply attaching the center wire from the coax to the ground on your car, i.e. instrument panel, seat bracket, etc. I wouldn't suggest using a 12V cigarette lighter power supply when doing this however...just in case. They work...but they don't work great.

The main reason for "code" still being required, is that under extreme emergency conditions, the extra "punch" per given power and conditions that CW (code) has, could make a difference. It is that, and only that. It has nothing to do with being behind the times, or anything like that. It is just practicality and eficiency in emergencies.

Other famous, or should I say infamous, goverments have had some
success in banning radio equipment. Specifically, the Soviet Union and
Nazi Germany come to mind. Many years ago, in a history class, I recall
reading references to a radio called a "Volksradio" which translates to
the "peoples radio". Essentially, its reception was limited to those
frequencies that the Nazis wanted their people to listen to.
Though some may scoff, I see many parallels between the Nazi regime's
telecommunications policy and current US telecommunications policy.

Indeed! I've found I can listen to three scanners at once while surfing the Net at the same time. Sorry, FRG9600, I've no free scanners to send you, but I've got a Realistic DX-370 shortwave portable that you're welcome to have if you'll just send me your address. I can't even GIVE that radio away, much less sell it :)

1060. Re: Forget about Cellular...

Newsgroup: rec.radio.scanner
Date: 1997-10-11 00:00:00 UTC
From: kut7bh@aol.com
Message-ID: <19971011223501.SAA10337@ladder01.news.aol.com>
Source record: 183501

Digital encryption of cellular phone transmissions is nothing new. AT & T (?--not sure about this, but I think that was the cellular provider) first offered digital encryption for cell phones in 1993, but dropped the option because of lack of customer response. The change to a digital mode of transmission will probably take at least 2-3 years. Where I live, 99% of the cell phone traffic is analog; I've only heard one encrypted conversation so far. I've found the same holds true with cordless phones; very few people are willing to spend the extra $$$ to purchase a cordless with speech inversion, at least if the traffic on my scanners is any indication. :)

Hi Bob,

> i need a repair shop for a aor radio.aor 1000 needs some work on the
> keyboard.

If its the keypad that needs replacing its not that a difficult job to do yourself. You will need to remove a few screws and unsolder two leads but its quite modular and the internal boards just lift out and you can then remove and replace the keypad.

Its a moulded keypad which you shouldn't have too much trouble getting hold off.

The "Scan", "Search" & "Manual" keys are the ones that usually cause problems as they are used most often.

Hope you sort things out.

I want a portable package that I can take out in the field to capture VHF-UHF frequencies. Ideally, the frequency counter should "write" to the memory of the scanner directly so that the scanner can then monitor the caputured frequency automatically.

What is the state of the art in consumer grade equipment now?

Follow the instructions in the owner's manual.
You will overcharge the batteries if you keep them
in the Uniden charger too long.

BTW, I reverse engineered the Uniden CRX-120 charger, drew its
schematic, then published the diagram in April 1996 Monitoring Times.

1069. Cheap cloning cables for AR2700/AR800

Newsgroup: rec.radio.scanner
Date: 1997-10-11 00:00:00 UTC
From: comma@notdot.net
Message-ID: <3440c70c.250766403@news.zippo.com>
Source record: 183576

Anyone interested in an inexpensive flat cable for their AR2700 or AR8000?

For those in the DFW area, Tanner's in North Dallas (I-35 and Beltline) has some Sumitomo 26 conductor cables that are about eight inches long. With a pair of scisors and some careful cutting, you end up with three cables for the nominal fee of thirty-nine cents plus tax. That's about fifteen cents per cable. I'm looking to build a serial interface using some of the schematics posted on various web pages and just coming right out of the project case with the cable.

For those out of the DFW area, Tanner's doesn't do mail order, but I picked up a handful. One dollar each (postage/handling included), no more than two per person, if anyone is interested.

Please send any e-mail replies to oujesky at arlington.net

Later...

Pursuant to US Code, Title 47, Chapter 5, Subchapter II, '227, any and all unsolicited commercial E-mail sent to this address is subject to a download and archival fee in the amount of $500 US. E-mailing denotes acceptance of these terms.

1070. Stupid question about discones

Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner,alt.radio.scanner

Greetings, all...

I have a question about discone antennas. In any discussion of discones, someone warns that the discone is not DC grounded and can build up a considerable static charge in the wind.

My question is, why not DC ground them? Can't an rf choke of a couple hundred uH be thrown between the disc and the cone, especially for reception? I usually see some discussions of bleeder resisters but not this. What am I missing?

Thanks much,

Eric F. Richards

On Fri, 10 Oct 1997 14:12:20 -0700, Ric Mackie <ric_mackie@hp.com> wrote:

> There's nothing wrong with honesty and truth.

But it does hurt....sometimes like a double-edged sword.

> I did not suggest that anyone should be other than honest
> and truthful. Did that get twisted or what?

No. It's just pertinent. Radio and other markets have, over the
years, forced a less-than-honest market. Fer instance, you in
your customer shoes wouldn't hesitate to ask that I take food
out of my kids mouths and give it to you. But may the gods help
me if I ask the same of you. My only defense, if I am less than
honest, is to factor in the 25% who will treat me with less dignity
than they demand for themselves and then FORCE my entire
market to PAY for the liberties of that 25%.

I don't believe that to be ethically and morally right.........

> My point is that the customer may, occasionally, make a mistake.

And he should pay for it if the vendor is required to pay for his
mistakes. 50-50, right?

> I feel that the vendor should have some tolerance for human error.

They usually do. It's customers who usually do not.

> There is a difference here where I would agree that no special
> consideration be given if an individual continues to abuse the favors of
> the vendor by asking him/her to bend the rules.

There is the 25% who do that as a matter of course.

> The vendor should have the final say, not the buyer, but sometimes we
> all make mistakes. If you sell something to me and the terms are agreed
> upon, I have no recourse but to ask for special consideration

Would you be receptive to giving special consideration to a vendor?
I doubt it. Or, if you are, the rest of the 25% are not.

> if I feel I should be able to return the product against our agreed upon
> terms. I don't have a right to complain. I do have a right to state, however,
> that I am unhappy with the deal.

And, by the gods, you'd leverage the food in my kids mouths to
force that special consideration, now wouldn't you? Most will. So

again, the industry's defense is to raise prices to cover the costs
of phony red carpets, limousines, bells, and whistles....and then
come off as Goody-Two-Shoes pretending to be all FOR the common
good. When in fact, they are for the good of the contents of your
wallet....and nothing more.

> I'll be happy to continue this conversation privately as I do respect
> your opinion.

It's less of an opinion and more of a commitment to the purity of
honesty, even if the 25% refuses to do business with me and cajoles
another 25% into their camps.

Prostitute, I am not. Crook, I am not. But my kids are just as good
as your kids, and they deserve to eat and be educated equally well.
That can't happen if I permit you to dip into my wallet whenever the
fancy suits your pleasures. Besides, you won't let me into yours.

My guideline in human interaction is....what else.... 50-50.

That way, both win. Any other way, and the one gains only at the
other's expense. You call that cool?

IMHO.

: law to listen to a cordless phone or a cellular phone
: conversation. Both of these devices are what are considered
: point-to-point communications devices. That is a transmitter
: that is designed to communicate with a specific receiver or
: set of receivers. A cordless phone handset is designed to
: communicate with a specific receiver, the base. A cellular
: phone is designed to communicate with a specific set of receivers,
: the cell control sights. It has been illegal to intercept these
: transmissions for almost 20 years now. This all came about
: because of the proliferation of small microwave pay-TV stations
: back in the early 80's.

This is incorrect. It has only been within the last few years that
it became illegal to intercept either cellular or cordless phone
transmissions. One reason that the cellular industry bought the
legislators is because the courts consistantly ruled that cordless
phone users could have "no expectation of privacy".

Calling them "point-to-point communications devices is stretching
the definition quite a bit. The signal is NOT beamed by microwave
to a tower, but is broadcast in all directions.

They are no more point-to-point than public service transmissions,
or even amateur radio transmissions.

: Your comments are based on a liberal, licensious society's
: idea of "I can so I should so I will" mentality. Just because
: you are able to do something doesn't make it right to do it. You
: say that the burden of privacy is on the individuals in the
: conversation. Then why isn't the "burden of thieftom" on
: the victim? Why is it against the law to steal a car if
: the keys are in it? Why is it against the law to take
: a candy bar from a store shelf? After all it is right out
: there in the open where I can get to it. Same mentality as
: your argument "well the radio waves are traveling through
: my house so I should be able to intercept them." You will

How is the person "stealing" anything from the person? Your
argument is very weak.

: say that stealing a candy bar and violating someone's privacy
: have nothing to do with one another. But in violating
: someone's privacy is just like stealing from them. But you'll

It depends on how you "violate" that privacy. If you venture onto
their front lawn, to look through the window or listen as the door,
then you are "invading" their privacy.

If they broadcast their conversations, either by radio or by
megaphone or yelling, then there is no "invasion" or "violation".

: say that it isn't. Well here's a non-tangible. Let's say
: you give out private information about someone. That's just
: as wrong as taking private information from someone without
: their permission -- right? The only question is the
: method of theft. Did you do it by reading their mail? Already
: against the law. But then why? It is right there in the
: mailbox where I can get to it....

Now, giving out private information that you obtained over the
radio has been illegal for about half a decade.

The mailbox is THEIR property, not yours. You have to invade
their property to get the mail.

But if the person themselves tell you that information, then you
are free to spread it to others. Polite? No. But it would not be
illegal - even without their permission. Ethical? Not by my
standards, but ethics differ between different societies, and
even subgroups within a society.

: You see there are already many laws on the books to
: protect a person's privacy. These laws are adapted and evolve
: to fit the current technology. Before telephones there were
: no wire-tapping laws because there were no wires to tap. Now
: that some telephones don't have wires there must be new laws
: to protect those phones from "wire tapping."

A more proper response would be to scramble the signals.

There is a great difference between copper wire, and signals
broadcast over the air. You seem to intentionally ignore this
fact. The courts didn't - but they were not bought by the
cellular industry.

: It is a real pity that laws like this even need to be passed.

It is an even greater pity that the law was passed in the first
place. I have given the reasons - which you obviously do not
agree with (and you seem to be the only person posting to this
list that does).

: You'd think that being unethical would be enough to stop it.
: Ethics? what are those?.......

As I noted above - ethics, just like morals, are mutable - and are not uniform between different segments of society. Who is to say that YOUR ethics/morals are superior to those of others?

: Laws are but a guide to a civilized society but the will
: not prevent certain people from acting in an uncivilized
: manor. -- Clarence Thomas

I wouldn't want to live in an "uncivilized manor" either. It would probably be rather cold, and wouldn't have comfortable furniture.

The right to monitor radio waves has nothing to do with the
freedom of speech, except that we'll lose THAT freedom, too.

Basically, radio waves are like sound waves. They know no
political or geographical borders. But get a stroke on this,
if you dare:

Suppose someone set up a parabolic dish across the street from
you and beamed it at your house. Also suppose they put another
parabolic dish on the OTHER side of your house and used it to
receive the RF that passed through your house.

Now suppose you jump onto the Internet one of these days and
see posted pictures of you and your wife, husband, girlfriend,
or boyfriend....boogeying in the boudoir!

Now don't you suppose it to be your inherent right to detect
and monitor those radio waves to determine for yourself if
there might be any harm associated with them?

Well, it better be your right, because such technology IS possible.
You may think you are in private behind closed doors, but it just
ain't so, pal. Just as if you have something secret to tell someone,
it's YOUR responsibility to whisper or take other precautions, so
too is it the responsibility of cellular and PCS users to make sure
their conversations are secure before they unload with the sweet
nothings and such. Privacy is NEVER the responsibility of the
listener; it is ALWAYS the responsibility of the talker.

"Gentlemen do not read each other's mail - unless they can."

I am looking for some insight on the range of an 800MHz yagi for monitoring a trunked system.I live about 50 miles from the transmitter and am considering purchasing an 11db yagi.It would be mounted on an RS push-up pole 30 feet of the ground.There are numerous hills (400 ft high) between my home and the transmitter.Currently I have an el-cheap-o RS 20-176 mounted just above the roof which I use to monitor local VHF.With this antenna I cannot even recieve the control channel of the trunked system.Would I be wasting $125 for the yagi?Any comments from people with experience in this area would be greatly appreciated.

Hey no just stop and think for a minute.....okay long enough?
If the laws get anymore restrictive the only persons allowed to scan
will be the so-called authorities. There not my authorities and I do
not ever intend on curbing anything I do with a receiver. In a free
society it is usually the person who is sending information or
electronic waves that is responsible for there own privacy. If you
talk on a crowded bus anyone might hear you, does this mean they must
all wear ear plugs with thy royalty speaks. BULLSHIT. If you have a
rough dog inside a fence on a chain and some damn fool lets his brats
roam the neighborhood and they tress pass on your property climb
through the fence to aggravate your pet and get bitten is it your
fault or shouldn the parents of these brats be charged with not
supervising and neglect in raising these kids properly. The same is
true with radio just look at the little tag that comes on all devices
now (this device may not interfere with any other). My scanner is not
transmitting anything but you cordless is and its interfering with my
receiver.

In <343ED681.4B85@ibm.net> Andy Moss <andmoss@ibm.net> writes:
>First of all, there is nothing illegal about cloning a cellular phone.

In the USA:

Section 22.919(c) the ESN of a cellular telephone must be "factory set and must not be alterable, removable, or otherwise able to be manipulated"

This ruling affected the older style Motorola booster kits which essentially was another transceiver that read the ESN and NAM info from the portable during each power up.

Maybe your actual mileage will vary up north. :-)

FS: Uniden BC9000XLT with GRE super converter and Uniden pre-amp.
Includes the manuals and adapters for all.
This radio is in PERFECT condition and is able to receive the full 800
Mhz band with the GRE super converter that's included in this sale.
Asking price is 250.00 plus shipping.

If interested send e-mail mailto:imho@usa.net if interested.

1096. WiNRADiO Modifications

Newsgroup: rec.radio.scanner
Date: 1997-10-11 00:00:00 UTC
From: bcheek@san.rr.com
Message-ID: <343eee3d.32974574@news-server>
Source record: 183603
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur,rec.radio.cb

Harken! Ye publique notice!

I am in the process of publishing four performance
upgrade modifications for WiNRADiO in both MONITORING
TIMES and in the WORLD SCANNER REPORT.

These first four mods are performance enhancements:

1. Sensitivity improvement
2. Reduced cross-mod
3. Reduced PLL Phase Noise
4. Sharper AM Selectivity

I have just learned that the factory is incorporating
these upgrades in newer production units, and there is
a way to tell if your WiRADiO can benefit from the mods.

The improved production WiNRADiOs have a bar code label
with a six-digit number preceded by a prefix "W1CHR", for
example W1CHR002027. These cards do not need any of the
first four modifications.

Earlier cards which have a different prefix or a five digit
bar code number without a prefix, for example *05678* would
benefit from the mods.

Due to copyrights and the need for details and clear graphics.
I cannot publish these mods on the Internet nor make them
available for download - hard copy only - is how it has to be.
These mods, including detailed instructions on how to disassemble
the WiNRADiO card down to component level appear in my MONITORING
TIMES "Experimenter's WorkShop" column in the Sept-97, Oct-97,
Nov-97, Dec-97, and Jan-98 issues. They also appear in
corresponding back issues of the WORLD SCANNER REPORT.

>>> How would you guys like it if someone was listening to YOUR phone
>>> conversations?

I neither like it, nor dislike it -- but I acknolwledge it. And that's why, as a matter of course, I would never use a cordless phone, or any other radio device, to transmit anything that might cause me harm or compromise. This is the intelligent response. As far as my routine phone conversations, I couldn't care less if anyone is listening. They won't listen for long, because they would die of boredom first.

>>> I don't like the government invading my privacy and I
>>> don't like people like you invading my privacy.

It is you who invades MY privacy to start with by transmitting radio signals that cross my property and my "space." While those signals are present, I will pluck them out of the air and listen to them if I damn well please.

Nobody, except a handful of knee-jerk hams who treat knowledge of Morse like it was a sacrament.

Requiring Morse Code for a ham license is like requiring that an electronics technician be proficient in repairing crystal sets. It's quaint, anachronistic, and useless except to those into nostalgia. Try to force your mind a few decades ahead of its present setting, and welcome to 1997!!

>TIA

Hi Hugh.

Next time why not tell us which freqs you have been monitoring?

I assume you are trying 31.1mHz and 31.14mHz. The first one is
used for statewide comms, and the second is usually used within
each state park.

Also, it has been my experience that 98% of DNR radio traffic is
during the day, but you mention monitoring all hours of the night.
Maybe they just aren't saying anything when you are listening.

All their radios are simplex (no repeaters) so the range is not
tremendous, especially with the mobiles and the portables.

Are these the freqs you have been trying?

Whoops. What a mess. Hopefully you wern't aware that you spewed
html code onto the newsgroup. You had better adjust or replace
your newsreader before too many people start avoiding you.
Also, you should complain to whoever made the excuse for a
newsreader that you are using.

Oops is right. You, hopefully unintentionly, spewed html code
onto the newsgroups. The result is wasted time and space since
html code has no function in newsgroups.
If you are using a Netscape product you should get rid of it and
get a newsreader since Netscape do not understand the net.

==========
Here is how to turn HTML off in Netscape 4.0:

1) Start Netscape 4.0
2) Select menu "Edit, Preferences, Mail and News Preferences"
3) Select tab "Compositions"
4) Remove the check mark for "Use HTML Composition Window"

And at same time check...

1) That "Allow 8-bit" is checked
2) That "MIME compliant" is unchecked

==========

-> From: "Warren Lauzon" <Wlauzon@worldnet.att.net>
-> Subject: Re: Illegal to Listen to Radio Now.
->
-> Nope. the full text of the law is at
-> http://www.eff.org/pub/Legal/ecpa.law
->
-> and from what I can figure out from the hundreds of paragraphs is
-> that it only becomes illegal if you disclose to another, or use
-> the information for personal gain.
-> --

(1) Except as otherwise specifically provided in this chapter any
person who--

(a) intentionally intercepts, endeavors to intercept, or
procures any other person to intercept or endeavor to
intercept, any wire, oral, or electronic communication;

That part is the heart of the ECPA. Later, there are exceptions for Law
Enforcement (with a valid warrant), communications employees in the
course of business, and for communications 'readily available to the
general public', and for Public Service bands.

NO exception is made for Cellular Phone bands.

(d) intentionally uses, or endeavors to use, the contents of any
wire, oral, or electronic communication, knowing or having
reason to know that the information was obtained through the
interception of a wire, oral, or electronic communication in
violation of this subsection;

THIS section would seem to apply to a certain member of the U.S. House
of Representatives, who 'used' information that he SHOULD have known was
illegally obtained.

Perhaps not for long. It was once legal to walk into any hardware
store and buy a machinegun. And it was once legal to modify
it once you had it, IE shorten the barrel, add a silencer, etc. But
not anymore. It is ironic to note that Maxim not only founded the
ARRL and was a driving force in the beginnings of amateur radio
(and by extension other radio hobbies), he also invented machineguns
and silencers. Two out of three have fallen under the iron hand of
government prohibition (defacto if not total). How long before it is
three out of three?

Another ironic note about silencers. In some countries they are
mandatory rather than prohibited. Quieter ranges make for happier
neighbors. It is a pity the US government doesn't see things that
way. Like finding a place to put up an outside antenna, finding
a place to shoot is becoming harder and harder due to pressures
from neighbors and homeowner associations.

I find that being able to copy morse code comes in handy sometimes
when trying to find out where some feed is coming from by
listening to a transponders ATIS audio subcarrier.

BTW, morse code is an international ham test requirement right now.

I heard of a Radio Shack manager using one of their wireless microphones to listen in from his vehicle in the parking lot to see if the employees were saying what they were supposed to say to the customers in regards to suggestive selling, etc. This violates the Federal statutes on Title III devices; covert audio surveillance.

The question should be: Who wants to risk possible law suits by publishing
copyrighted material?

The only way around this would be to create completely original manuals.

Code is not the only type of emission allow. If someone chooses not
to run packet does that mean they should find another hobby that they
can do?

Perhaps you should install a key on your cell phone and communicate
using Morse Code to insure privacy.

Many folk feel it is their right to be able to at least detect the
presence of a transmission that is passing through their property or
person.

I used an analog cell phone when they first came out but now I use a
TDMA type which costs less than my original analog and air time is
less expensive. Encryption is a byproduct of more efficient band
usage and it ends up being less expensive. I personally do not care
if someone listens to my conversations but when I upgraded to a new
phone TDMA was cheaper. It also doesn't interfere with my scanner
nearly as much as analog did.

If you are truly worried about privacy and cost you'd do well to
upgrade to a new TDMA or the newer CDMA phone. They come with a lot
of features that aren't available on analog and aren't the bandwidth
hogs that analog is.

I'm thinking about going for the no-code Tech license. I'd get it
strictly for two meters. That's all I want it for. Having a ham

license doesn't require a person to do anything with radio. Why get so hung up on code. I could learn it easily but what is the use if I only plan on using 2 meters. If I find that I'd like to get into some of the lower bands it's really no big deal to take the code part of the test. Knowing the code does not make or break the moral integrity of the individual.

You'd do well to welcome as many people as possible to the hobby else the ham bands will get sold out from under you.

Mike

No, but does that mean that any questions having to do with packet
should be removed from testing? RTTY and Slowscan are old technology.
Why are they on the test? Shouldn't they be excluded too? If one doesn't
plan to operate VHF, should they still have to be tested on those
concepts? Where does it end?

Glenn

Wrong Wrong Wrong

Morse code was required to mitigate interference that hams may have caused with other radio service with which they were sharing bands. Hams had to know code so they would understand when another station told them to shut up because they were causing interference.

Not a problem today. Just about every radio service amateurs share spectrum with have abandoned code for anything beyond automated identification.

Hams have retained the code requirement and the incentive licensing system in as a hazing ritual to get an amateur ticket.

All of the nonsense about code being required because of great emergency communications potential is just that - nonsense. That may be why a FEW people want to keep it but that is not why its still required. Most of the code supporters just want to keep their version of a spanking machine.

Why this is in a boating and video newsgroups is beyond me. Resetting followups as appropriate.

I have the following equipment for sale...

(2) RCI-1000 VHF HANDHELD TRANCEIVERS $100.00
Made by Ranger Communications, Inc.
2 channel operation (154.600 & 154.570 Mhz)
Range is approx. 2 miles (depending on area)
Units are in good operating condition
Cosmetics are in good shape
Units come complete with stand up chargers
Sorry, no owner/operator manuals

UNIDEN PC 66 (75 Channels) $80.00
Freq. range 26.965--27.795MHz with freq. chart for easy channel location
Roger beep on PA/CB switch
Female having orgasm (Noice toy)
Tuned & peaked for max peformance++Power--4 modulating to 17 watts
Unit works and sounds great
Cosmetics are in good shape
Complete with new microphone, new power cord,
and new after market mounting bracket
Sorry, no owner/operator manual

ALAN MASTER MM-59 ECHO/POWER MICROPHONE $20.00
Wired for cobra 4 pin (Cobra 29,etc.)
Has two-tone roger beep w/ on/off switch
Variable echo control
Mint condition

Fluke 8600A digital multimeter $45.00
Test-- AC, DC, Ohms, up to 1200 volts
5 digit L.E.D. readout.
Pushbutton function controls.
Supplied with:
New power cord
Test leads
Owner/operator manual
Cosmetics (case) is in fair condition.
Good operating condition
Note: DC volt reading, reads approx. 1 volt higher
than actual received voltage.

SENCORE Model TC 109 TUBE TESTER $40.00
Unit is in good working order and is in good shape (cosmetic)
Complete with tube chart and TC 109 adapter

All prices are firm and units will be shipped at my expense
in the USA only. I will ship COD at your expense.

Interested?? Contact PANTH18251@aol.com
Thank you...

> Save yourself the money. Don't buy it.

Don't buy one to replace a radar detector. But, if you want a very easy to use casual mobile scanner get the BCT-7 instead and use it with an external whip. It is useful to set one of the programmable memories to CB ch 19 and listen to truckers reporting bear sighting at mile posts as well as scanning for mobile extenders and State Patrol dispatches.

It is true that it will pick up the mobile extenders but that only tells you a cop is around within a few miles 'somewhere'. But don't buy one of these scanners for just this purpose either since you will be disappointed.

However, I used to think that these BCT beartrackers were useless to avoid a speed trap until one day I heard them clocking cars from the air. Needless to say your radar detector will be useless but the BCT WILL tell you at least 10 miles ahead of the trap since you will hear the bear in the sky at 1000 feet altitude!!!

Happy trails

(snip)

You missed my point. The no-coders are saying CW is useless, old technology and the like. I say so is RTTY, Packet, AM, SSB and the like. If you throw CW out because it is useless and boring than you have no reason to leave the other modes in either. Why should I know the band limits, I only want to operate on 20 meters. Why should I know antenna theory, I will pay someone to do my antenna work. Why should I care about different modulations, their abbreviations and such, I only work FM. Why should I have to learn all the formulas and principles to get my Advanced Ticket, I just want the extra frequencies to use during contests! Why not open it to all like CB? All the theory test is a hazing ritual, most hams would fail the theory test if they had to be retested today. Why give a test at all?

Well a nocode license gets the phone patches and repeaters
now, so they seem to have nothing to do with the issue at all.

There are NO such things as off channels. The FCC has no
channel assignments for ham radio. The channels that exist
are by agreement within the ham arena. Infact, hams...all
hams are free to modify their equipment anyway so your
fear already has no justification in reality.

Hello All,
I have a Motorola MT-1000 99 channel hand-held VHF transceiver. Scans 8 channels, emergency switch, light, PL. No charger. Battery (NTN 5447B) and antenna included.

Unit is in good condition. Best reasonable price accepted. Ship UPS COD.

Once again it needs to be pointed out that hams can skip the
questions on packet, RTTY or slowscan TV and still pass the
test because none of these subject areas are tested for on a
separate pass/fail basis as is the case for code.

I would welcome a comprehensive scoring of both the
theory and code to obtain a passing score. Indeed, I have
posted just such a proposal/suggestion before...BUT the
code supporters don't want that because it then becomes possible
to get the license without passing the code by simply scoring
very well on the theory test.

Here's what I suggested over a year ago:
(Note, this was published in the ARRL magazine,
QST in July 1997.

A CW Testing Compromise?

First, is there a middle ground? In the CW testing debate, the
prospect mentioned most is that any change in CW testing must be
accompanied by an increase in difficulty for the theory elements.

Current General and Extra class requirements include passing both the
CW test at 13 wpm (20 wpm for Extra) and a separate theory test. But
what if test takers could take the CW test on a combined scoring basis
with their General or Extra theory test?

How would that be accomplished?
During a VE session, if a test taker failed the CW test, they would be permitted to merge their CW test results from that day's test with their theory results also taken on that day only.

The combined scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 (19 + 7) answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test. The same concept could be applied for the Extra.

Doing this would retain the same overall test methods (only the scoring process would change) and no additional VE record keeping would be required. The benefit of this option is that if someone does poorly on their CW test, they MUST score higher on the Theory element in order to obtain a passing score. That automatically raises the difficulty level of the theory test for those people that ignore learning CW at those speeds.

In summary, this suggestion meets the concerns of hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,
3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It is an easy to implement process if approved by the FCC and
6. It is a compromise solution.

Note, I would not suggest merging the 5 wpm CW tests unless the international treaty requirement changes..

I often pick up what sounds like a cell phone call on frequencies around 460MHz. Does anybody know what cellphone service this is (could it be Orange phones)?

1144. PRO-2041 & Computer Interface

Newsgroup: rec.radio.scanner
Date: 1997-10-12 00:00:00 UTC
From: cdeviney@intellinet.com
Message-ID: <3441502c.145471306@news>
Source record: 183343

Just wanted to pass along what I consider a good value:

Radio Shack has the PRO-2041 (made by GRE, the same as the 2004/2005/2006/2042, etc) scanner on sale from $300 to $200. It has 400 channels, very good search capabilities, 40 channel monitor and MANY of the same features that are available in the PRO-2042, which costs $400 (it was $500, until the '98 catalog came out). The PRO-2041 is the base version of the PRO-64.

The 2041 is VERY similar to the 2042 except the 2042:
has 1000 channels instead of 400
has 100 monitor channels instead of 40
will let you change modes (AM, NFM, WFM)... 2041 has AM/FM only
receives AM/FM radio, TV, and 25-29MHz, 200-400MHZ, and 960-1300MHz
has rotary dial for channels and frequencies
has sound squelch (I think this is similar to data lockout)
allows you to change frequency step size (5,12.5, or 50 kHz)
moves frequencies within a bank, from higher channels to lower, empty channels
has 1 priority channel, the 2041 has 10
I don't know if there are other differences, as I don't own a 2042.
If any of this is inaccurate, I hope someone will post a correction.

The best part is, the 2041 is capalbe of downloading from your computer, through the headphone jack on the front of the unit. You can make a cable by buying 3 parts from the RS, that will cost you about $8.00 and requires no soldering. The instructions are available with a shareware program called "RADIO MANGER for WINDOWS", available on the internet:

http://www.interplaza.com/bensware/rm.htm

There is an accompanying program also available called "FREQENCY MANGER for WINDOWS".

Together, the registration fee is $40.00 U.S. currency.

So for about $250 you can have a very nice computer controlled setup.

RS offers an extended 5 year warrenty for about $60, that's about a $1 per month "insurance policy".

I have no affiliation with RS or the author of the shareware program.
I am just passing along information.

Just to verify this whole mess, I went to RS today and told them I wanted to order a PRO-2006 manual. They knew NOTHING about a ban on shop manual sales. However, when they called the order in, they were told that it was "restricted". The people on the other end wouldn't say who it was restricted to or why.

I've spent thousands at RS over the decades. They've seen my last penny.

I have a VERY good scanner and OCR software at work. If anyone will lend me their manual for a day or two I'll see what I can do about getting digital copies of it made. Perhaps we could get all of RS's "restricted" manuals on a CD (I can make those, too) in HTML format?

I've seen some talk of the test mode for the SC150 scanner, and decided to try it on my BC230. I am talking about the one where you hold "WX" and "L/O" and then turn the scanner on. It worked, and much of the features described in the earlier postings were the same for the 230. I also discovered some other things. Usually, when you hit the keys 1-8 while in the test mode, it says "up x.xx" (x.xx being the decimal). If you press the WX key the up/down arrow keys then says "lo x.xx." It seems as if the "lo" limit is 0, but I'm not sure if they're all the same. If anyone has figured out or knows what the decimals are for or the other mode with the "n" please post to this group or e-mail me back.

Andrew,
I've owned about 50 scanners/receivers and let's just say
the BC8500XLT was probably the worst model I've ever owned.
For starters, it just plain didn't even work right out of the
box. It had to be sent back to Uniden who I must say promptly
fixed it and got it back to me quickly. But it has poor
filtering and generates tons of interference which creates
problems for scanning and searching.
Let's just say I think you can do much better. If this
is the type of radio you want then save a few more dollars
and get a used BC9000XLT. You'll be much better off IMHO.
Good luck!

Greetings, all...

On CNN tonight (10/11, 10:00 ET) They ran a story which was clearly driven by the CTIA and featured Thomas Wheeler. The story concerned cell phone cloning and how cloners use scanners to obtain the codes to clone. However, the story went, there is legislation in the works to make the equipment needed to do that illegal.

The story is a masterful piece of deception in that it associated cloning boxes with scanners and refers to "equipment" rather than cloning boxes or scanners.

Ain't the US turning into a wonderful place? All the news or laws you can buy.... (retch)

sounds like it might be worth it to start taking a very close look at what
all the RS stores are doing and reporting any and ALL infractions.I really
like the boycott idea.I have already convinced my family on both coasts not
to buy anything from RS.Also I will no longer buy from them for personal or
corporate uses.Im just one person,but I figure without my business its still
lost revenue.

>Don't believe everything you read in a newsgroup.

I don't believe any such thing has been proven. The preponderance of evidence so far indicates that Tandy *says* that the FCC "requested" them to stop providing manuals. I'd say the odds are fairly good that Tandy is lying or obfuscating about this. It may help if we get similar evidence from Uniden and other scanner makers.

If Tandy is telling the truth, then there's always the possibility that the FCC is lying. The government would never lie, right? Hahaha! There may well have been some unofficial discussions between Tandy and the FCC that led to this decision. As I said before, we'll probably never know the facts. If Tandy is the only one to knuckle under, then buy from their competitors. If all manufacturers follow suit, you can figure the FCC is the culprit, no matter what they say, and then I suppose pressure could be brought on them politically, although I don't know how much good that would do.

The bottom line here is that Tandy is under no obligation to supply manuals to you anyway, as far as I know. There seems to be a good opportunity here for a third party to supply manuals, but you always have copyright issues to deal with, so you couldn't just sell copies of Tandy manuals.

The whole thing is a sad commentary on the times we live in, IMO.

Edward Zajicek wrote: You are asking the same qustion I posted here
several months ago. Uniden BCT-12 is a scanner which detects the
"so-called" mobile extender which transmits signals from cop's chest mike
to his radio in the cruiser. When a cop leaves his car, he turns the mike
on and the scanner picks it up. When he comes back he should turn the
mike off. But only in theory. Many cops drive all day with their
transmitters on and BCT-12 may pick up their signal. So, you know that
the cop is around.

Now, how about if his transmitter is off? Then you will not get a
warning. The bad news is that the newest GE police radios have the
extender automatically disabled every time a cop steps into a car. The
only kind of warning, if any you will get if he stops somebody to write a
ticket. Then you are safe, anyway.

Some people who used BCT-12 complained that it is good in everything but
detecting cops. But even if you detect one, it may well be a cop
traveling on different road several miles away. (This is hearsay, not my

opinion).

Sincerely,

Edward Zajicek

>>>(I know, I'm a lawer).
That is the saddest case I ever heard from a LAWER (your spelling of the word, not mine). How do you accuse anyone of doing something before they actually do it?

That is the point !!! Don't accuse someone of something before they have done it.

Secondly, anything that bounces off the four walls in my house will be intercepted, decoded, unscrambled and listened to by me without repercussions of ANY law as long as what I intercept, decode, unscramble and listen to is kept within my four walls. That's MY law in MY house. I dare you, Mr. Lawyer, to try and change that!

Finally, I am more than certain that if RS has a policy, they could care less about what your profession is. A big company such as they are not about to go against a government order to satisfy you, no matter what you claim to be. Either the claim about securing schematics is bogus or your story is. I think you would want to emphasis the truth about which is bogus....as a lawyer, that is.

> Yes, I did order one last week.. After telling the Regional Manager that I
> was a lawer and that he and Tandy were going to have some serious legal
> implications if they didn't...

Oh...don't look now but, you spelled that word that word...you know....your claimed profession....wrong again. I think a lawyer would know how to spell "LAWYER". A mistake is OK but you did it twice. I am really starting to doubt your credentials.

As a lawyer, you should let people vent what they feel is fair and not fair. We make the laws, as stupid as they may seem. Shutting people up stifles their input and only isolates them from the system.

Your writing seems to jump around, in and out of different ideas. If I missed any of your points it may be due to the lack of continuity in your writing. That is not a good trait for a lawyer to have. I would work on that.

Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

12/10/97 -- VisualRadio, the sophisticated RS-232 control package from Liedtke GmbH, now has a demonstration version available via FTP.

Featues of full program include:

*Controls a wide range of popular radios. ICOM all models (including the R-8500), JRC NRD-525, NRD-535, KENWOOD all models, RACAL 6790/GM, YAESU FT-736, FT-840, FT-900, FT-990, FT-1000, FT-1000MP, FRG-100, FRG-8800, Selected AOR models.
*Control Panel. Signal and frequency display; mode, agc, etc...
*Signal Display. Analogue S-meter display; max-hold; choice of dBm, uV, mV, S, RMS or peak. *AF Analyser. Audio frequency spectrum derived from sound card (not supplied); 2.5/5 kHz sweep width; Peak Hold/Average; frequency at mouse pointer; Zoom x1, x2 or x4; Length 256, 512, 1024 or 2048 points.
*Networking. VisualRadio can be used in a Windows-compatible network environment
*Tuning. Receiver tuning via double click on the corresponding data in a table or on the desired frequency in a graphic display. Frequencies, mode of operation etc. can be easily transferred to the Masterlist, Channel Table and Log File; Automatic identification of stations at tuned frequencies
*VR/Link. Link together two radios for dual operation using a pair of serial ports
*Database. Unlimited number of Microsoft Access compatible databases; Additional features - user defined fields, filtering using SQL queries; SQL query save; sort fields a click of the mouse; search and replace all data in table columns
*Timer. Timer-controlled scanning with automatic recording of broadcasts
*Audio Recording. Recording in Windows WAV format
*On-line User's Guide. A comprehensive on-line User Guide in Windows help file format guides you through all the features of the package. There is no printed manual..

VisualRadio is available in the UK from Simon Collings, Radio Communications Consultant. Point your web browser to the following URL for details of this and other radio related products:

http://wkweb4.cableinet.co.uk/simon.collings/products.htm

Please note: FTP server currently has a limit of 32 users - if you get an error please try again later.

Simon

Do you suffer from buckteeth and a harelip, by any chance? No
matter, I'm all for law and order. It's just that if some sicko
commits a capital crime or even the threat of one to me or mine,
I want the moment at hand to stiff 'im.

Once the snotball is caught and locked up, I'm not so sure any
justice is served by society stiffing 'im. Society doesn't
give a hang one way or the other once the prick is locked up.
You talk of taxpayers' money.....how about the pay of the judges
and lawyers and the cost of the system itself?

> Where were you when he was dealing
> out his cruel and unsual punishment to some little six year old
> child he raped and murdered, or someone he killed while highjacking
> their car, why do you not protest that?

What's the use of protest? It's already done. Just lock the sicko
up and torture 'im every day for the rest of his life. And if it
ever turns out he's innocent, then let HIM turture the bastards that
put him away.

> I not only think they should be put to death,

If we were "allowed" to defend ourselves, that could happen at
the most opportune time....in the act. I'm all for executions
when there is no shadow of a doubt.....on the spot.

> I think they should die the same way their victims did.
> And since this is off topic for this NG, this will be all I have to
> say on the subject.

I just don't like the idea of government having the power of Life and
Death over We The People. It is a very dangerous thing. Government
can prove whatever it wants to prove. So a formal death sentence does

not create the kind of proof that we really need. Best to not let Government become so powerful.

Now they're taking our scanners and service manuals away from us. You think they won't kill, too?

IMHO.

Bill (dont@have.mail) wrote:
:
: >If I tell you I have a scanner capable of cell phone (or cordless)
: >reception, what can you do to stop me from listening?
:
: Nothing, unless you are dumb enough to tell him where you live and if you admit
: to listening to Federally controlled frequencies. A phone call to the FCC would
: probably ruin your day.

Simple words are not enough - the person could be simply bragging, for some unspecified reason.

Statements made to a law officer could be a problem, as the officer's statements in court would probably be considered more truthful than yours.

Statements under oath/affirmation would have the highest weight.

: >If I tell you I have a scanner capable of cell phone (or cordless)
: >reception, and I use it to listen to your cell phone conversations,
: >how would you know and then PROVE I did so?
:
: By your own admission in writing, duh.

Once again, unless it is under oath/affirmation, it is only evidence. It is NOT proof.

: >If I tell you I have a scanner capable of cell phone (or cordless)
: >reception, and I use it to listen to anyone's cell phone
: >conversations, how would the FCC know and then PROVE I did so?
:
: Again....by your own admission.

See above.

: If you don't think so, why don't you put it to the test for us. You seem pretty
: confident that nothing will happen. So...test it for us will ya? Tell us where
: you are, tell us that you are listening to cellular right now and see what
: happens after someone places a call to the FCC or your local police.

Legally, the local police cannot do anything - unless there is a local law against listening. Even then, they would have to find direct evidence (very hard to do). A phone call is only a tip - and it could be completely bogus. I doubt if the local police would do anything but laugh.

: Since when is it impossible to be guilty until proven innocent? Seems to me
: that you'll be the one PROVING you weren't listening to anything illegal.

Not if the laws work the way they are supposed to work - which they do not,
in many cases these days. You are supposed to be innocent until proven guilty,
not the other way around. Sadly, this is often not how it goes.

: don't like people like you invading my privacy. Besides, you need a life
: of your own if you don't have anything better to do than to stick your
: nose where it don't belong.

If I were using a cellular phone, which I often do, I wouldn't mind in the least. After all, it is a two way radio. I have no expectation that the conversations will be private - until the cellular providers go to encrypted digital.

It is trivial for you to do the same. If you want your privacy, you have some obligation to attempt to obtain that privacy. You can do that with phone conversations by simply using that funny looking handset that has a cord on the lower end that plugs into the other funny looking box with the pushbuttons on it.

And, before you jump on me, I do not listen to the cellular band - even though I have a scanner that could be modified in a couple of minutes to do so.

[big snip]

I have many questions about this "new" technology. For example, how do they get signals past step-down transformers? Does this mean adding high-voltage transfer capacitors to every sealed power pig? That could get expensive.

How many users can be on a system at the same time? In a typical subdivision, there may be hundreds or thousands of homes. Spread-spectrum techniques may fail under these conditions.

Power lines in underground installations are simply fed through metal pipes. There is no attempt to control impedance or crosstalk. This means very sophisticated equalization is needed to accommodate the bandwidths claimed.

The AC line is terribly noisy. Switches and contacts arc each time they are activated and deactivated, creating broad-band noise. If there is sufficient gain in the electronics to equalize the signals for the bandwidths claimed, the noise may saturate the amplifiers and create transmission errors. This will slow the data transmission when blocks of data have to be re-transmitted.

There are many other examples of money wasted on ideas that overlook one or more basic engineering fundamentals.

I would be surprised if the "positive" results from tests are true, or hold up in actual use.

If you mean accuracy to one or even to single digit nanosecond
accuracy, I've not heard about them. And 10^-12 doen't mean anything
to me as a measure of a clock's accuracy, perhaps this refers to the
accuracy of a frequency sub-standard?

Why would the use of a cesium timebase that is orbiting a few hundred
miles up and perhaps a couple of thousand miles away be more accurate
than one that is closer to you without uncertain propagation delays?

I too am running an 18 ft. Rad Shack CB base antenna ... Although I do not have
it fully extended because of townhouse homeowners rules, I have no problem receiving.
I also run the Radio Shack "all band" mobile antenna when driving, it does well also.

Looking for used scanners.

Unit can have any number of channels - hand held or base - older units or new (no crystal units). Must work flawlessly, have original accessories, and be in reasonably good cosmetic condition...original carton and manual would be nice, but not necessary.

Please describe the scanners features, operating condition and appearance in your reply, along with your asking price...

Thanks,

John & Robert
St. Louis, Mo. 63116

P.S. We can also trade ham gear instead of paying cash - if you're interested in a swap, inquire for list of equipment available.

www.potg.com = Free comedy radio, Unique and Award-Winning

http://www.potg.com/
See: Why everyone on the internet is talking about this progressive new website; why up until now, this site has grown simply by word-of-mouth.
Hear: The show that is breaking boundaries on the radio, making it an entertaining medium once more, and why certain sites have already heralded it as "the show that will redefine radio and will usher in a new style of comedy for the 21st century."
Taste: The difference between Planet of the Grapes' potent style of humor and the type of humor that makes you turn off your television or radio in disgust. The show's hosts guarantee that whether you like it or not, it is impossible to deny that it has a unique, fresh style.

The Hosts: Deaze Beans, Yahdderman, and U.B. Jackson
The Show : Planet of the Grapes
The Site: http://www.potg.com/
The Reason: Join the bandwagon that is headed into the future of comedy!

My understanding is that the United States signed a tready at an
International
Telecommunications Union (ITU) meeting many years
ago requiring short wave ham radio operators to demonstrate ability in
morse code.
Thus the FCC can only drop the code requirement on VHF which they did.
Dropping
the code requirement on short wave will require a change in
international law, a much
slower process.

Well, adults vote on it, the the problem is to find the public
rhetoric that puts the problem attractively, possibly mentioning
that the government doesn't want anything but is subject to
fits of stupidity of this or that form, which is why we vote.

The conspiricy form of it isn't very attractive, as far as voting
goes.

I am certain that Bill is a very courteous operator ... your attempt to
attach some sort of character flaw to him is completely unfounded
and unwarranted.

> Maybe you can get Carl or Coffman to explain it
> to you.
>
> 73,
> Clay N4AOX

I certainly can't explain your argument to Bill because it makes NO
sense ... not one iota ...

If you think you have a point to make, please don't cop out half way
through when someone asks a sensible question that you can't answer
without admitting that you don't know what the hell you're talking about.
Either be prepared to follow through and back up you claims when
challenged, or don't start spouting crap in the first place. These aborted
attempts to discredit fine folks like Bill simply because they are against
forcing Morse on everyone just waste time and provide no value whatsoever ...

On the 870-890 MHz frequencies, you SHOULD be able to hear both sides of the conversation. Most times you can, some times you cannot. I don't know why only one side would be heard on those frequencies, but just as the cell switches, you can hear the other voice. On the 825 MHz frequencies, you can hear only the mobile phone, and then only if you're very close -- say within 2 miles. Same principle for cordless, except the base units are from 43-46 MHz and the handsets from 49-50 MHz.

Managers? Probably not. Management? Before the sound of the
pin drop reaches DFW. They care very much about their image...
to the point of thinking that anything with the name "shack" in
it refers to them... like trying to get "Bianca's Smut Shack" to
cease using the word "shack" in the name of her service.

Mike,

It is a common mistake (usually made by government employees) to list only a small portion of a subsection. You must include (a), (b), etc., if they exist. Listing only part of a subsection is the same as withholding part of the truth. Now, before the flame cannon is turned on, I think listening in on other peoples conversations is reprehensible and you would have to be a slug to even consider it. But if you want to cite law, cite it properly.

> Sec. 2511. Interception and disclosure of wire, oral, or electronic

The way I figure it, if the cell eventually goes to a land line, the cell
and
the land based signals go through the same wires. With this in mind,
have could you prevent at least some feedback on the cell transmitter?
The mobile transmitter could easily avoid feedback because the only link
would be from the microphone to the transmitter.

If you do a search for the pro46 on the web you will find a site
that has all that info and also the info on how to modify it to get it
so that it gts those as part of the band plan
but anyways try 2,9 enter or 2,9, and some other key that is all I
remember right now.

1209. Coax connector Freq Rating

Newsgroup: rec.radio.scanner
Date: 1997-10-12 00:00:00 UTC
From: ABurzynski@swri.edu
Message-ID: <61quor$gm1$1@coqui.ccf.swri.edu>
Source record: 183408
Cross-posted to: rec.radio.scanner,res.radio.shortwave

I noticed in the Grove catalog that coaxial connectors have a frequency rating. The following is from the catalog:

Connector Freq (MHz)
Motorala male 30
RCA phono 30
PL-259 300
F male 1G
BNC 4G
N male 11G

Would someone please explain what this means. For example, If I buy a quality RG-8 cable, and I cannot put a BNC connector on it (due to size of the cable), I'm forced to use a PL-259. Is my listening rolling off sharply at 300MHz due to the connector I use? If there are and web sites that have info on connector ratings, please post info on them. Thank you.

Al

AOR AR1500 handheld scanner, .5-1300mhz continuous, 1000 memory channels, search and store features, receives AM,FM,NFM,CW and SSB both upper and lower. I have all the accessories for it including 2 nicad battery packs, AAA battery holder, wall plug, antenna, case and manual. This unit is in excellent condition both cosmetically and in operation. Brand new this scanner was $500.00, but I will take $225.00. If interested, please E-mail me.

Thanks,

Bryan Young

A opto Scout connected to a AOR8000 with cell should do the trick for you. You can buy the Scout in the States but the AOR8000 with cell would have to be purchased in another country with less stringent laws. NOW...getting it past customs is an entirely different story...this is not so easy.

Good luck.

Norm B.

>: If you tell a federal agent, that would be different.

I realize Warren's post was
in jest to point out the fallacy of expecting any enforcement
of the cell/cordless privacy laws.

But, again, ownership of a scanner is not a crime anyway, so
there's no basis for any federal agent to bust any door to
gain entry since there's no crime.

>20 WPM.

What difference does it make how fast someeone is
sending to know/hear that a frequeecy is in use? I sure
can't read digital yet I know what it sounds like as and
can therefore tell if a frequency is in use on that basis
too.

>Does that mean to fire up the old rock crusher and
>tune up here? Wake up and smell the Morse "UNK". It's a
>matter of practicality.

The practicality is missing on your side. You seem to think
that if I can't read 20wpm code then I can't tell if the
frequency is in use. What rubbish.

>How much chaos and interference
>(world wide, now with the sunspots coming up) are you

##################################
THE RCI FEDERATION ANNOUNCES
##################################

RCI-ROM 1.1
A CD-ROM for RCI 2950, 2970, 2980, 2990, Saturn, Satutn Turbo and similar rigs owners.

All the mods well explained with texts, photos and videos
No a simple listing of Howtoos but a real multimedia product with menus, musics, sounds...

Multimedia part:

Enhanced & re-written user's Manual with un-published tricks
Full Diagram: Main Board + CPU board + Microphone Encyclopedia
Full listing of all the components
Full table of voltage values
Full table of frequencies - channels
Full alignment procedures
Repair tricks, errors, enhancements...
Plenty of mods with photos, videos, voice explanation....
Extreme mods "for transverting to other bands" chapter
A full DX Guide with beaming utilities & programs
A Rci Packet chapter: How to practice Packet with your rig
A complete information on the RCI Federation, the full collection of already published RCI Newsletter...
The RCI BIBLE 3.0 beta (exclusive)
+ Over 1500 mods for other rigs (Ham and CB radios)

Video part

Component section ID
Internal Controls ID
Channel conversion on new 2950, my old one got stolen.
MRF477 intro and removal of 2SC2312's
MRF477 pin reconfiguration.
MRF477's installed and AMC transistor location.
Observing the radios output on a scope and wattmeter.
Introduction of the Heavy swing modification.
Candlewax (just watch it!)
Observing the effects of the swing kit modification on the
Wattmeter and scope.

Disassembly of the radio.

and much, much more.....

The needed computer will be:
486DX2, Pentium, Pentium Pro, or any other compatible
RAM: Minimum 8 Mb - Hard Drive: 20 Mb free on the disk
Video: 800x600 VGA or upper
A CD-ROM reader 4X & a SoundCard
Everything is in English.

Price: $35
- Credit card Visa/Master Card
- Cash
- Mail orders
- Resellers and importers, please contact for other payment protocols.

Date of release: 30 October 1997.
We directly deliver 96 Hours in any country and we are looking for local resellers or importers. Please advise.

There is a beta version available at our web site: http://rciweb.cadic.com (9 Mb in a EXE autodecompressing file).
This CD-ROM is the product of an international collaboration (France - USA - UK)

-> size of the cable), I'm forced to use a PL-259. Is my listening
-> rolling off sharply at 300MHz due to the connector I use?

A) Yes, the signal WILL be somewhat attenuated at freqs higher than the
connector is rated for.

B) there ARE good quality connectors available for ALL cable sizes, just
don't expect to see a GOOD quailty BNC or F connector for 9913 at
Radio Shack.

Try asking at aa Ham Radio store, they carry MUCH better stuff for
antennas. Expect to pay more, but it IS worth it.

Warning!!!!!! This is pure stupidity, most likely posted by a competitor
of Radio Shack. Who would be fool enough to believe a retail chain would
be a part of some government plot to spy on and harm the very people for
whom they exist for. The only reason Radio Shack asks for you name and
address is so they can mail sale flyers to you.

Can someone tell me the last model of Radio Shack scanners which was modifyable
to close the cell gap?
Thanks,
Bob

> Don't believe everything you read in a newsgroup.

Heed your own advice then. It has NOT been proved that
the FCC had nothing to do with it. We simply do not know
and that's all there is to it. If one branch of the FCC
says they didn't coerce Tandy, then they either lied,
which is eminently possible....or equally possible is that
they don't know of the branch that did the coercion.

The fact is....from several sources....is that Tandy
claims the FCC asked them to stop supplying service manuals
for their scanners.

Now we find out more....and until then, nothing is "proven"
except that Tandy is refusing to provide manuals now.....

Steve Donnell published a modification article for the BC220XLT
(aka BC230XLT) in the January 1995 RCMA Scanner Journal.

The RCMA is out of business and I don't know of a source for
back issues.

It's easy and fun to jump on RS. But which other scanner manufacturers have the same policy, or have never made their service manuals or schematics available?

Should they be given equal 'dumping'?

>
>What does high SWR have to do with what type of cable you use?

A high SWR will make lossy coax even more lossy. And the fact is scanner antennas have pretty high SWR because you can't make an antenna that covers the wide frequency range of scanners that will stay flat over more than a small porsion of that range. This is especially true of antennas which use traps. The saving grace is that SWR rarely has appreciable effect in receive applications.

>
>> and in is now my scanner antenna and it works great.
>

I would be leary of using a Ringo on a scanner because it uses a gamma match which at certain frequencies will act like a dead short.

It's hard to compare antennas because there are so many varables involved. I can switch between any of four on my tower and overall, they are about equal, but on any particular signal, one may work much better than the others- yet on the next signal, the same antenna might be the worse.

See the Sept/Oct 1994 issue of National Scanning magazine
(Box 360, Wagontown, PA 19376).

The BC8500XLT sometimes hears images of 820 - 1059 MHz
stations when tuning the 311 - 550 MHz range. Steve Donnell
published a modification to increase image sensitivity in the
BC8500XLT in that issue.

I had this arguement years ago with a guy who finally got me to "look into it" for myself. Bacause of the court costs involved with the umpteen appeals you get on a death penalty conviction it's actually cheaper to lock `em up and throw away the key. When was the last time a death penalty conviction NOT appealed up to the state supreme court in your state? Do you think all them judges and court-appointed attorneys work for free? Then there's the "media event" outside, where protesters gather to claim that it's cruel & unusual punishment to gas someone.
By the way, what's this have to do with those assholes I work for and their stupid policies about scanner service manuals? With this new Sprint/RadioShack deal, and the small selection of scanners in the 98 catalog, I'm thinking that you won't be able to buy a scanner at RadioShack within the next few years.

I think that the "lawyer bozo" is missing the point. "I could listen if I
wanted to, but I don't" that IS the whole point of the arguement. It's a moral
decision that every scanner user has to make, and most of them say "I can
listen, but I really don't care about what I would hear". The best analogy I
can come up with is this:
My Corvette has the ABILITY to go 150mph, the speed limit is 70 and I choose
to obey it.
My scanner has the ability to pick up cell phones, the law says I shouldn't
listen to them, so I choose not to.

Radio Shack continued producing several previously modifiable scanners,
such as the PRO-43 and PRO-2026, after the cell mod ban of April 1994.
The later versions are definitely not modifiable and are worth
considerably less than their more flexible counterparts.

Hmmmm, will HR Bill 1964 cause hoardes of SWL and scanner listeners to move uo here to Canada? It is legal to listen to cell phone and other comms, as long as you don't use what you heard for personal gain, and you don't tell what you have heard. Downside of Canada is the 11 months of winter ;-) oh ya! the only odd law is in Manitoba you can have a radar detector in your car but not a scanner, the opposite of all other Provinces...

BTW RS only sell the USA version of their scanners, but unblocked models from other makers are sold

Unless you are talking to yourself that should happen, correct? I see
nothing wrong with that. That is how many transmitter problems are first
diagnosed. On the air. Big deal.

That is what is left in the brain after the test is passed in the majority
of hams. If I don't use the theory in practical applications periodically
I won't retain it. Sorry, it is a hobby, at times an obsession but it
isn't my life.

HAHAHAHA! A bit too extreme but I get your point. All you've done is cut
out the VE and ARRL. I doubt that in a year the bands would sound much
different. Well, maybe a bit. The good propagation is finally coming back
our way on the higher bands.

The bottom line for me is this. Both the code and theory test are nothing
but a hazing routine forcing all members to go through the same ordeal to
obtain certain privileges. There is no discrimination, we all take the
same (well sort of) test and have to jump the same hoop to get the class
license we want. So what? Life is like that. The hazing has the purpose.
It shows that your passion for radio is strong enough that you will study
and take a useless test to prove that devotion! (Or is it an obsession?)
We don't need some mamby pamby wannabe CBers mucking up the bands! Hell,
after you pass the test you should have to run the gauntlet. Two lines of
hams whipping at your butt with rubber duckies! Yea, let's add some pain
to the hazing too!

Its not that the connector wont work above "the rated limit" its that the thing will present an inpedance bump! The line my appear to be 52 or 75 ohms but the connector will be 120 or 180 ohms. SWR will exist at the connector. If your scanner has a BNC for antenna input you can place an N-connector on the coax then use a BNC->N adaptor...73's

I have 3 questions about the Pro-2022 scanner. How much does it cost? How many channels does it have? And does it cover the 800 band?
Also which you be better the Pro-2022 or thePRO-2005 and PRO-2006

Than you,
Max

ABurzynski@swri.edu wrote:
: I noticed in the Grove catalog that coaxial connectors have a
: frequency rating. The following is from the catalog:
:
: Connector Freq (MHz)
: Motorala male 30
: RCA phono 30
: PL-259 300
: F male 1G
: BNC 4G
: N male 11G
:
: Would someone please explain what this means. For example, If I buy a
: quality RG-8 cable, and I cannot put a BNC connector on it (due to
: size of the cable), I'm forced to use a PL-259. Is my listening
: rolling off sharply at 300MHz due to the connector I use? If there are
: and web sites that have info on connector ratings, please post info on
: them. Thank you.
:
The PL-259 can be used up to 450 MHz if properly installed. I've always
had good power output and SWR on 70 cm using PL-259's with 9913 and
9913 flex. Amphenol does make a BNC that can be adapted for RG-8 or 9913;
however, the adaptation is a pain, and it doesn't appear to work any
better than than a PL-259. For VHF and UHF, using a low loss cable like,
9913 flex, for runs over 10 feet is more important than using a lower loss
connector than the PL-259.

Message-ID: <34427F0D.7FC8@hp.com>
Source record: 183236

I was at a swap meet (Camera) and saw a gentleman using a Kenwood FRS type and after a short discussion I realized this was not the radio that everyone has been discussing here. This one was bought two years ago in Japan -- I have seen them there and know they would be illegal in the US.

So I am curious what frequency this would be on when used -- assuming they are not on the same FRS in the US. What frequency is allocated in Japan for these devices?

>42.460
>

They could just be experimenting.

In San Diego County, they are using new frequencies as full repeaters
without Dispatch being heard on the old Dispatch-to-Car frequencies:

San Diego (office 87) units - 39.400 mHz

El Cajon (office 108) units - 39.600 mHz

Oceanside (office 92) and
Temecula (office 115) units - 39.800 mHz

Do not know if they are trying the repeater system due to the hilly
terrain in S. D. County, or there are other reasons to moving to full
repeaters. I recall there being another CHP area where I heard both
sides of the conversations on the dispatch channel - but was only
passing through that area very briefly. And thought it an anomoly.
Might have been Riverside.

Hope this helps

Morse code serves a purpose, as does all that technical stuff that gives one the intellectual tools with which to build ones own transmitter from scratch.

First, there is the shear delight in the practice. I know a ham whose main involvement in the hobby was building the absolute minimum transmitter possible and operating CW QRP mobile. Using this extreme minimalist approach, my friend was able to work stations around the world on less than one watt via a straight key strapped to his leg as he drove around town in his car.

Another way of stating this is: why use ham radio at all when you can simply pick up a phone or send email? Why does anyone take up any outmoded technology as a hobby? Sailing, for example, or steam engines.

Second, CW is possibly the minimum amount of modulation with which one can communicate. It doesn't take much imagination to come up with several disaster scenerios where one might be reduced to this form of communication or die.

>None of these
>are needed to assure safe, compliant operation and prevent (or at least
>reduce to a tolerable level) the probability of interference to other,
>more important services.

You're absolutely correct. Given the reliance on store-bought equipment these days, I'd say the typical ham has no idea whether or not they are interfering with another service, or just splattering across the amateur band, unless someone else tells them they have a problem.

I remember a few years ago I was talking on 146.50 simplex with a couple of friends, and started to hear another ham talking (I could only hear him, not the other party.) However, he sounded off-frequency, and I thought perhaps he didn't realize he was interfering with us. I wasn't the only person hearing him either -- a couple of friends nearby who were also in the roundtable could also hear him. After searching a couple of kcs up and down from our frequency, I eventually found him on 146.100, on a repeater input. Turns out he had a problem with his radio, and was splattering all over 146.10 through 146.60. He had no idea until I called him on the phone and told him.

Unless we're going to require hams to periodically inspect their radios for spectral purity, there is no way a ham today will have any idea their radio is causing a problem to another service unless they have someone tell them. And, if we *ARE* going to require this periodic testing, I guess people like Stevenson will be happy, since only him and his 100K-Club RF engineers are going to be able to afford the high-end test equipment necessary to test these rigs.

>The fact that the ability to recite these theories is unnecessary makes
>the imposition of a theory testing "requirement" arbitrary and
>unjustifiable. Sounds familiar, eh?

Absolutely. Your argument is one I've been making for years. The *ONLY* requirement for testing by the FCC is to ensure that you have a working knowledge of the rules and regulations -- what you can and can't do. Anything above and beyond that is, as you call it, simple technical hazing -- forcing me to learn something that I may not necessarily want to learn. And, quite frankly, I don't see why we need the entire VE system. Each time you buy a radio, just have the manufacturer include a copy of Part 97 with it. When you apply for a amateur radio license, just have a application which looks like this:

8< -- Free Amateur License -- 8< -- Clip and Save -- 8<

A F F I D A V I T

I, the undersigned, hereby acknowledge under penalty of law that I have
received a copy of FCC Part 97, have read and understood the same, and
agree to abide by the terms therein.

All that may be true, but it has no bearing on why it should be REQUIRED.
So far, the only real justification I have seen is some old international
treaties.

In the mid-70s, CB sets ran from about $150-200 for a cheapie AM set
to over $500 for a good SSB set. Pretty much equivalent to what 2
meter gear costs today when inflation is factored in.

Yes, the Irish have frequencies. So do the German, French and Italian. Americans have lots of frequencies but not as many as they used to. It doesn't look as though they'll keep the ones they have left, though. I'm not sure what the Dutch have.

>technology and the like. I say so is RTTY, Packet, AM, SSB and the like.
>If you throw CW out because it is useless and boring than you have no
>reason to leave the other modes in either.

You misunderstand the position of most nocoders. We would
actua;;y agree that CW merits no more (or no less) concern in
testing than the other modes you mention. The problem is,
as I stated before, it is only CW that merits the special, and
totally unique pass/fail separate test element.

>Why should I know the band
>limits, I only want to operate on 20 meters.

Now you are just being silly. Although, I actual agree
that memorizing band limits is of limited value since
they can and o change. I'd much rather have a
frequency chart as part of the test and then have
the test taker show s/he can derive the proper band
limits from the chart.

>Why should I know antenna
>theory, I will pay someone to do my antenna work.

Skip the antenna theory if you want...and you can
still pass the test anyway since the score required on
theory is 75%, you can miss 1/4 of the questions and
I haven't seen antenna theory being 1/4 of the questions.
Remember, there's NO separate pass/fail antenna theory
test element as there is a code test element.

>Why should I care
>about different modulations, their abbreviations and such, I only work
>FM. Why should I have to learn all the formulas and principles to get my
>Advanced Ticket, I just want the extra frequencies to use during
>contests!

Repeat comment as above.

>Why not open it to all like CB?

Very simple, it is only you that raises such a
ridiculous propect. Is that what YOU really want.
It isn't at all what the nocode test advocates want
as we have continually had to restate in the face of this
type of insane argument.

> All the theory test is a
>hazing ritual, most hams would fail the theory test if they had to be
>retested today. Why give a test at all?

Once again it is only the procode advocates that keep
raising this balogna. Not one of the nocode test advocates
believe in lowering theory requirments/testing. In fact,
we'd like to see it made more difficult as already has been
done by increasing the Novice and Tech question pools
by 50% as of 7/1/97.

Diode D-6 removal should do it... HOWEVER, it appears to be somewhat
major surgery (requires skill with desoldering) in order to get to
the diode.

See the Jan 93 Monitoring Times or try the QRZ site's mod directory
for additional info.

> All the theory test is a
> hazing ritual, most hams would fail the theory test if they had to be
> retested today. Why give a test at all?

The theory test is NOT a hazing ritual because it is relevant
to the government's need to assure safe, compliant operation
and prevent (or at least reduce to a tolerable level) the
probability of interference to other, more important services.

Someone not having the ability to copy fast Morse code does
not make them a threat to anybody ... and there is no need to
be able to copy code to understand "go away you are interfering
with our operations" messages from other services, since we really
don't share spectrum with other services (on HF) and virtually none
of the other services use Morse any more anyway.

The fact that the ability to copy Morse is unnecessary makes
the imposition of a Morse testing "requirement" arbitrary and
unjustifiable.

They haven't changed much.

Actually, the Sheriffs office has a fairly accurate list:

http://claraweb.co.santa-clara.ca.us/sheriff/sccfreq.htm

The *city* of Santa Clara is all trunked 800MHz, however, the
Santa Clara Fire Department simulcasts on their old VHF channels:

Fire 1 153.965
Fire 2 153.440
Fire 3 153.845

Also check out the "Golden Gate - San Jose" office of the CHP.

http://cad.chp.ca.gov/GGCC.htm

And some others:

I tried one and sent it back. It's ok, but I get much better reception using a Grove adapter for my car's am/fm radio. For just a little more, you can get at Rat Shack mobile, which runs rings around the no-tenna. The MFJ 2m-70cm mag mount does a really good job for $15.

I've got plans for an old tube transmitter that will allow you to transmit either over the air or power lines. If you know your way around electronic circuits, I'm sure you could "connect to the plate of tube U1 instear of resistor R8 and be heard all over town" because the power line version means you can broadcast only until the signal runs into a transformer.

> >believe.
> >

Well, whether it`s a "rumour" or not is a moot point. Maybe some thinking is in order here, about Radio Shack`s position with relation to the FCC and the FCC`s power over Radio Shack. I can assure you, the FCC, does NOT have to say "OR ELSE" to Radio Shack, since just about every device to be sold by Tandy has to be approved by the FCC prior to it being sold. This means that FCC power over Radio Shack would be absolute, since it could just fail to approve any new devices for sale, thereby putting Tandy out of business, if it wanted to. NOBODY has mentioned this ability to coerce Tandy (or any other scanner manufacturer / Electronics devices dealer) that the FCC wants to. So when the FCC makes a "suggestion" to Tandy, or any other electronics dealer, the "OR ELSE" part does not need to be voiced, since it is already understood.......
Who is the FCC answerable to ? Probably nobody but itself, as far as I can determine.

I have sat quietly and read postings about "suing the federal government". Wishful thinking. First, you would need the FEDERAL GOVERNMENT`S PERMISSION TO SUE THE FEDERAL GOVERNMENT. Although this has happened is a few rare cases in legal history, it is unlikely to be given in this case. Let me know how you make out with this in 10 or 15 years, when they are done "deciding if the case against them has merit"..... In the meantime, enjoy your tax audits, and don`t try to get a government job, especially one that requires any security clearance. If you already work in some government capacity, start job hunting now, and avoid the rush. Check often to make sure that no drugs have mysteriously "appeared " in your car, house, etc....... Make sure that nobody "messes up the federal records" of your wife, mother, or any one else near, dear, (and related) to you. You wouldn`t want their Social SEcurity checks to suddenly stop because the Federal Government had suddenly decided they were "deceased" or , as actually happened to a friend of mine, that they had NEVER EXISTED IN THE FIRST PLACE. Yes. By all means. File suit against the Federal government. And then go jump off a tall building to see if you "bounce".....

What kind of radio do you have? Is it a "tripple conversion"
type?

It is probably intermod, or images, of the cell band. You must be
close to a cell site.

The "orange phones" contain the modified guts of a Motorola
(550?) portable cell phone and are programmed to dial certain
numbers. No "special" frequencies for them.

Bah! You arguement is silly. You can use LESS technology, and have every
expectation that no one will overhear your conversations. But, that will
require you to use a conventional phone - rather than a two-way radio.

What does listening to people's converstations have to do with anarchy?

Actually if it is a new console they would press 1100. Since you have
a cross ref guide can you tell me what 2 tones make code 4300? Is it
possible to send me that x ref guide?

Thanks

Too many transmitters mean no one can transmit.

Also there are those who abuse it. There will always be. If the
total number is low, it is not severe enough to make the entire
thing useless.

No way. Understanding the theory of transistor gain does nothing for that.
What does knowing Thevenin's Theorem do to achieve the above? Why do I
need to know about Circuit Q, phase angle between voltage and current,
oscilloscope performance, sine wave, sawtooth wave, detectors, transistor
type, emission designators, dynamic range (blocking and IMD),
semiconductor material and monolithic amps to name a few. None of these
are needed to assure safe, compliant operation and prevent (or at least
reduce to a tolerable level) the probability of interference to other,
more important services. To do that you need to prove you can read a
manual and push buttons. Your argument has no merit. It is technical
hazing. It has nothing to do with compliance and safety.
The fact that the ability to recite these theories is unnecessary makes
the imposition of a theory testing "requirement" arbitrary and
unjustifiable. Sounds familiar, eh?

> Someone not having the ability to copy fast Morse code does
> not make them a threat to anybody ... and there is no need to

Huh, above you said "and prevent (or at least reduce to a tolerable level)
the probability of interference to other, more important services." Which
one is it? This or the above, you can't have both Carl!

> The fact that the ability to copy Morse is unnecessary makes
> the imposition of a Morse testing "requirement" arbitrary and
> unjustifiable.

So should 90% of the theory test then. It is just a hazing ritual. It has
no practical purpose.

I am trying to remember the average price of equipment. I think it was at least
double the $50 stated. There might have been some pieces of equipment
for $50, but I don't recall any except 100 millawatt walkie talkies.
Only untill well after the peak, did prices fall.

We have over 15,000 hams in the state of NJ and they all
can use the repeaters, etc yet none are operating out of band.
Mr. James fears are ill founded and unsubstantiated by fact.
And, since use of repeaters and phone patches takes place
primarily on the VHF bands where NO code is needed to get
a license, then the fear of overcrowding leading to illegal
operation is totally without merit.

If there is any real evidence of what Mr. James states
regarding overcrowding, then that has NOTHING
to do with code testing. If his claim is true, then the
FCC should be convinced that there needs to be a
limit on the total licenses issued...AFTER which any
new licenses are issued on a waiting list basis as
other licenses expire. Use of a code test to serve
as a barrier to entry just to limit the numbers is a misuse
of the testing procedure.

Bill Nelson is correct, there is NO minimum speed requirement in the
treaty. Even a one wpm knowledge would meet the letter of
the treaty. I used the 5wpm example as it is the lowest test speed
know in use for US licensing.

1319. Regency Informant questions

Newsgroup: rec.radio.scanner
Date: 1997-10-13 00:00:00 UTC
From: Nick Marsh <nickwb4sqi@wwd.net>
Message-ID: <34422014.4E6A@wwd.net>
Source record: 183307
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I just acquired a Regency Informant scanner. Sort of a neat little thing already programmed with each State and local frequencies.

I am curious about the ooperation, when the toggle switch is in the highway position does it just scan state highway patrol freqs?

In the city position is it local pd freqs?

OR, is this a attenuator switch for minimizing intermod so that when out of town on the highway it has better sensitivity than in town?

When in city mode I still hear the KSP only the display says "CM" instead of "SP". Local police also display "CM" also. I may be hearing KSP on the mobile extender freq of 154.665, not sure as the Informant does not display the frequency.

Are there other display codes other than "CM"?

thanks for the help...

I found that code tapes sending characters at 20+wpm worked best for me. I just put them on in the car and played them until I couldn't stand it any more. Your brain will speed up to capture the sounds and translate them into words and phrases.

Be sure to take the 20wpm test before you try the 13wpm, that will speed your mind up and 13wpm will seem slower, and (like me) you just might pass the 20wpm when you really only expected to pass the 13!

Go for it! DavidC AA1FA

1323. Wanted: Opinions on the Uniden SC150

I am in the market for a portable scanner and am looking at the
Uniden SC150. Is there anyone out there that can share thier
experiences with it?
Thank you in advance for any info.

Lars Polkinghorne

1324. SF Bay area FS or trade: Computer,perfect for packet,decoding ACARS, WEFAX,etc

Newsgroup: rec.radio.scanner
Date: 1997-10-14 00:00:00 UTC
From: Tom Montgomery <monty55@ix.netcom.com>
Message-ID: <3443BA65.5683CDF8@ix.netcom.com>
Source record: 183112
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

FS or trade: IBM PS2 $150.00

386/25
6MB ram
120 MB HD (60 mb drivespaced)
15 inch (14.25 viewable) IBM VGA color monitor
IBM keyboard
IBM mouse
win 3.11 with MS Word and Excel
DOS 6.22

Perfect for dedicated use of decoding ACARS, pagers, packet etc....I used it for ACARS exclusively (DOS) but don't have time anymore. In excellent condition. Not a speed demon in windows but does a good job for what I used it for !

I would be willing to trade for older transistor radios, older shortwave radios (in particular one that was made for Sears that is a multiband. I believe it was called a Convex or something like that, very heavy and big.), older scanners that work (no radio shack models) or anything that you might have that is in the same realm of interest (but no CB's :))

If you live in the SF Bay area I will deliver for free. Sorry it is too much to ship and still be a good deal for anyone except in the local vicinity.

Thanks,

Monty

>Can anyone give me their opinions of the BC 3000XLT - good, bad or
>indifferent?

>
>Thanks! Joel (jak@localnet.com)

Joel,
I Have Been VERY happy with my BC3000xlt....
Full 25-549.950Mhz and 760Mhz-823.9875Mhz and
849.0125Mhz-868.9875 and 894.0125-1300Mhz coverage.
Yep...Cell Band is cut out...But if you have a cell
phone fetish You can receive Cell Images in the
1005Mhz-1021Mhz range...(from what I have been
told as i would NEVER listen :^))
Only Downside to this scanner is the Battery
setup...A Nicad pack that you can't use an
alkiline pack in place of....but that can be fixed
by buying an extra battery pack....
Also: If the Public Service in your area uses
an 800Mhz Motorola Trunked system, you
might wanna go for the BC235xlt "Trunktracker"
instead....Otherwise the BC3000xlt is a wise investment.
Hope this Helps!!

I have a Radio Shack Pro 43. I misplaced its original charger and had to buy a new one where you had to choose the correct pole setting. I think, though not sure, that I inadvertenly switched the poles on the charger and now the scanner will not work at all. I was told that it might be a diode on the inside that may have been damaged due to the reversing of the poles. I've tried to recharge it by changing the poles again, but that didn't seem to work. Any ideas would be greatly appreciated.

Maybe you ought to show up at their shareholder's meeting
to complain about this outrageous attack upon their
customers access to information; perhaps you could get
a shareholder's proposal together to condemn U.S.
government attacks upon the right to access information
as well as a pledge for the company to maintain access
to service information for the life of currently
offerred products.

I seem to recall a court decision going against IBM for
keeping customer service info accesible only to company
service people because it prevented other firms from
offering service to IBM copiers; anyone recall this?

I really don't understand the fuss about Morse Code being a requirement on Ham radio. Any moron can learn CW - but it takes a special kind of moron to pass the Technical part of the exam! <G>

I think Hams who found it difficult to get their "ticket" are more apt to appreciate the privelidge of being part of the elite.

Noting worth having doesn't come without some kind of fight. (didn't some singer say that?)

I don't know about the USA but up here all communications related laws are Federal - I'm pretty sure they are in the USA too (hence the "F" in "FCC"). Individual provinces (states in your case) can't pass any laws pertaining to RF Comms.

The cellular cloning thing went through the courts up here and was tossed out. I'm just saying it is legal to clone a cellular phone but it would be illegal to do it for the purpose of stealing communications.

Much like cutting a car key. No problem here until you use the cut key to steal the car you were test driving at the time! <G>

What do you want in a scanner?

base scanner
hand=held scanner
mobile use scanner

all three

all two

some base scanners can work in a car or
in a HUMBEE or even an airplane...

What is it you want and what do you want
to listen to when you get this ideal scanner
you want for $300 ....?

Good idea is to get the catalogue from
Grove adn Scanner World and AES and Gordon Park Radio
and Radio Shucks...

www sites: grove, scanner world and AES.

one cannot advise you until you "share"

then we can all jump on your bod

bill conduit
etc.

I am currently out of work and am forced to sell some stuff to pay
bills. Here is my list. All equipment works 100% and is in either
brand new condition or dam close. Prices are firm and you pay shipping.

Radio Shack PRO-62 with brand new NiCad rechargable
batteries, antenna & AC wall charger/adapter. This hand held scanner
receives:
30-50, 118-174, 380-512, 806-823.9875, 849.0125-868.9875, 894.0125-960
this radio has not been modified. It is in excellent condition and has
only been used indoors as a base scanner. 8 months old paid $299+6%
sales tax.
FS: @ $175

Motorola SP-50 Hand Held UHF 2Channel - with 1 battery, antenna & drop
in rapid charger with slow charge option. This radio is in brand new
condition
and is less than 4 months old. It is currently programmed for 2
channels in the 460Mhz band. I paid $389+$49 for the rapid charger.
FS: @ $275

Yaesu FT8500 2M/70CM Mobile w/Deluxe Microphone - Yaesu
programming software, programming cable, Mars/Cap mod, tone decode board

installed, attractive microphone stand, box and all literature.
You don't even want to know what I paid for this (Way too much!)
FS: @ $590

> stated that there is a non-RS scanner out there in the $2,000 range that can
> do the job. Can someone help in recommending a proper scanner for this,
> along with sources please. Thanks very much.

If the talk groups are indeed digital then the Trunk Tracker won't do you
any good.The TT's will only 'track' Motorola analog 800MHz trunked
systems.Do some more investigating of the system to be used in your area
before making a purchase.
--
Regards,
Dave

P.S. Trunk Trackers are made by Uniden,235(handheld),895(base).RS will
have the PRO-90 out soon,it is a clone of the 235.Check out RS's 1998
catalog.

All,

Please be patient before jumping to any conclusions ref. Radio Shack's decision not to sell scanner service manuals or schematics to the general public.
We at Popular Communications magazine are determined to get to the bottom of this issue, and I'm in daily contact with officials at the FCC, as well as representatives at Tandy Corp.
I have asked Tandy to provide a copy of the FCC's request, or at least provide me with the name of the FCC official who made the request.
Unfortunately, the person who was responsible for issuing the order withholding the service manuals is no longer working for Tandy and those remaining have been unable to find any such FCC order. They are attempting to reach the former employee, and have also asked their legal staff to investigate. This may take a day or two. It is possible that Radio Shack has been the victim of a hoax, or perhaps a disgruntled ex-employee.
IMHO any trashing of Radio Shack's reputation, boycotts etc. are premature until we have all the facts. Once we do I will post them on this newsgroup, as well as include them in an article in PopComm.

NO...
you are in for a "bad surpise"

no San Mateo County in this "try=it, you'll like it'
database....

and no Sunnyvale given either being in Santa Clara
county...just San Jose

best find another database

every try searching on http://www.altavista.digital.com

radio frequencies
scanner frequencies

the search words to use when doing that kind of thing.

San Mateo is a very very very large area and has many,
many frequencies to program...close to 100 plus

Sunnyvale Fire is 153.77
for a start...

they also hook up with CDF in most fires near the '
freeway up west: #280

And then each little hamlet around that freeway has
their own little numbers to program along with mutual
aid and even airplanes that drop the RED GOOP.

It's a very sophisticated system...using a very
unsophisticated radio system....

bill conduit
etc.

RS stores are plenty in San Mateo County and
they have the most recent book....

1351. Re: Illegal to Listen to Radio Now.

Newsgroup: rec.radio.scanner
Date: 1997-10-14 00:00:00 UTC
From: "Amor Powers, CB Radio" <power@CB.Radio.net>
Message-ID: <3443FA59.37CE@CB.Radio.net>
Source record: 183139
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.cb,rec.radio.amateur

Warren Lauzon sez:
[Is it illegal to listen to the radio now?]
> Nope. the full text of the law is at
> http://www.eff.org/pub/Legal/ecpa.law
> and from what I can figure out from the
> hundreds of paragraphs is that it
> only becomes illegal if you disclose to another,
> or use the information for personal gain.
> ----------

What Amor said was:
"In the USA, unless something has recently happened that would make
major
news, it is
*not_yet*_illegal_to_listen_or_view_any_frequency
of the electromagnetic spectrum,
regardless of who is talking,
or what type of device they are transmitting on."

As with many laws, a clear line does not exist which defines illegal vs legal "interception".

The point is... listening to a frequency was not made "illegal". It hinges on the nature of what constitutes and "interception" and how it is accomplished. This may seem a fine point to some people, but as understood by others, it limits the application and reach of this law. A typical gray area of the law application might be: Can an "interception" take place if there is no transmission to intercept, ie., the frequency is locally "idle"?

If the frequency is listened to or viewed for scientific or research purposes (such as radio astronomy), or where entities other than US licensees or extraterrestrial or foreign sources might be transmitting, would such entities be "protected from interception" by this law and "illegal interception" be taking place?
The answer to this is clearly "no".

Message-ID: <620tli$j45@clarknet.clark.net>
Source record: 183140

Hello. I'm looking into getting a Uniden BC9000XLT. I would like the radio to come with an antenna (not necessary), the owners manual, a GRE super converter, a Uniden Pre-Amp, and anything else it originally came with. I would like it to be in perfect working and cosmetic condition. I'm not interested in buying one, but I will trade the following for one:

Cobra 23 Plus Mobile CB Radio
PRO-2026 Mobile/Base Scanner
Kraco CCB-4007C Mobile CB Radio
Cobra HH-35 WX Handheld CB Radio
Cobra Trapshooter 3 Radar Detector

If you would like more information on the above pieces of radio equipment let me know. Please in your e-mail let me know what comes with the scanner and what condition it's in. Thanks for reading!!!

> First, there is the shear delight in the practice.

Some people are into whips and body-piercing ... that doesn't
mean we all should have to do it ... what may be your "delight"
is many other's "torture."

> I know a ham whose main
> involvement in the hobby was building the absolute minimum transmitter
> possible and operating CW QRP mobile. Using this extreme minimalist
> approach, my friend was able to work stations around the world on less
> than one watt via a straight key strapped to his leg as he drove around
> town in his car.

SO? If he likes it fine, but that doesn't mean we all should have
to do it ...

> Another way of stating this is: why use ham radio at all when you can
> simply pick up a phone or send email? Why does anyone take up any outmoded
> technology as a hobby? Sailing, for example, or steam engines.

Some folks (like the BOC racers and the America's Cup teams) are
into extremely high-tech sailing ... others cruise in minimalist
sailing vessels with kerosene-powered navigation lights, no electricity,
and no refrigeration ... neither side tries to force the other to
comply with *their* way ...

> Second, CW is possibly the minimum amount of modulation with which one can
> communicate. It doesn't take much imagination to come up with several
> disaster scenerios where one might be reduced to this form of
> communication or die.

Right ... and the code will save the world when the aliens come
to take over and wipe us all out ... I'm afraid your right in one
(technical) respect, however ... it doesn't take "imagination" to
come up with those sorts of scenarios ... it takes "delusions."

Don't need generic legal info, Ronny baby.
Just asked for the "case name" for the "Great Texas FCC Infra-Red Bust"
massacre.
It's a federal case, according to Kevin. It's easy to get a copy of the
case, knowing the name. Glad to report on it here on this newsgroup, if
indeed it is in the public record.

Hi,

> Any way to modify the RS PRO-60 to recieve cellular?

As with most of the most recent RS (mfr by Uniden & GRE) and Unidens own sets the frequency "coverage" is controlled by the main IC?CPU rather than a Matrix of Diodes or similar as on some earlier sets.

The US PRO-60 uses a CPU that has those frequencies used by Cellular in the USA frequencies blocked out, the version sold here in the UK and elswehere in Europe uses a different CPU (the only different component between the two "models") that does not have the frequencies used by US cellular blocked out (ie full 800MHz).

The only way to restore the frequencies used by US Cellular and allow keyboard entry is replace the main IC (a 100 pin'ish surface mount chip). The PRO-60 however does not have programmable increment steps and you would find if you did replace the IC then it would step through the 800MHz frequencies in 12.5KHz increments. US cellular uses 30KHz.

Hope this helps.

What a mess! Your newsreader spewed html code into the newsgroup.
Since newsreaders do not use html all it does is to waste time and
space and annoy people. You should discard that newsreader since
it is faulty and get a real one.

==========
Here is how to turn HTML off in Netscape 4.0:

1) Start Netscape 4.0
2) Select menu "Edit, Preferences, Mail and News Preferences"
3) Select tab "Compositions"
4) Remove the check mark for "Use HTML Composition Window"

And at same time check...

1) That "Allow 8-bit" is checked
2) That "MIME compliant" is unchecked

==========

You sure can. Just place the phone right next to your scanner and the digital signal will get into the audio amp. As for listening to GSM digital calls you have no chance. The calls are not only digital but encripted as well. The GSM digital range is 935 to 960 Mhz base TX with the handset TX 45 Mhz lower.

I've had one for several weeks. The actual tracking of the trunked system is fantastic - really neat. The radio; however, seems to have pretty poor sensitivity. Several freqs in my area (like fire/rescue/ems dispatch) are simo bcst on the trunk and 154 mhz band. Frequently a long transmisson in the 154 band is never heard from the trunk system. Programming on non-type II systems is a bit challenging. Audio output is horrible - very low. The speaker is a joke. All that said, the radio is worth it for the major step forward in scanning. Until everything is encrypted. ... Cal

Mike,
Apparently Groves supply of 450's and Message Tracker programs was
confiscated by the government. This from Bob Grove himself. Seems it
has to do with some pager notification group in the NJ area that was
ACCUSED of recieving pages of important NYC officials and passing them
along to those paying for the service. Yet to be proven....

Things that make you go "Hmmmmmmm"....

So, to use your example, if one has proven to be able to safely and competently pilot a single engine propellor aircraft, we should allow them to sit in the cockpit of a multiple-engined jet aircraft. After all, the principles of flight are the same for both aircraft, they both have power plants and flight control surfaces, they both use the same runways at the same airports, they use the same radio frequencies and talk to the same air traffic controllers at the same airports.
The point of the matter is this. Being able to copy code at 13 wpm shows a specific degree of dedication to improving one's skills in this hobby and should be rewarded with a license upgrade. Being able to copy code at 20 wpm shows that the individual has mastered skills and abilities in this hobby and truly deserves to be an Extra class.
Myself, I'm just a Tech Plus, working on the 13 wpm for my General ticket. I figure that if I want that license upgrade enough, then it's going to have to be something that I'm willing to WORK for. Nothing worth having is worth having cheaply. When I'm upgraded to General, it's going to be because I DESERVED it. Same when I move to Advanced and then up to Extra.
Code is NOT hard to learn if you have normal hearing and a reasonable amount of dedication to learning it. Those who cannot learn code are usually those who WILL not learn code. There is a difference. Besides, FCC rules have now been changed to allow one to take a SENDING test instead of a COPYING test. We ALL know that it's easier to send code than it is to copy it, so there's an option for those who just can't "hear" the code. Also, if you can PROVE that you have a medical condition that prevents you from learning the code, you CAN have a waiver applied to that portion of the exam.
All sounds pretty fair to me. The way I see it, the people who are

complaining the loudest about the code test just seem to be too lazy to expend the time and effort it takes to learn the code. It's NOT that difficult, it just takes a little time...

Look in the 1998 Radio Shack catalog, there is a "TRUNK TRACKER" in there.
I don't know what the difference would be, but they offer an Imported
leather glove for their "TRUNK TRACKER" on page #54 the item # is 20-062
DELUXE IMPORTED LEATHER GLOVE!!!! $19.99

I hate Radio Shack....

Nope, as I stated in another post. The 23 channel basic CB unit
I bought for my antique car convoy use in 1976 was only $40
on sale. That was when the NEW 40 channel units were being
offered for the first time.

>"thousands of people crowding the spectrum?"

The fact is that the 11-meter band has become the cesspool of the airwaves. The lowest common denominator can be found in that band, and is crude, undisciplined, and ignorant of the rights of others to use not only the same frequency, but those adjacent to the frequency in use. The current ham licensing requirments keep the riff-raff off the airwaves (as much as possible) and keeps the spectrum useful for meaningful communications...

Since the PCR1000 is an external black box that connects to your computer over a simple RS-232 serial interface, the receiver and its external antenna can be mounted away from your computer to minimize the amount of noise pickup.

How
> many channels does it have? And does it cover the 800 band?
> Also which you be better the Pro-2022 or thePRO-2005 and PRO-2006

(1.) Used prices in the $100 - $160 range
(2.) 200
(3.) Yes. Full 800 restorable by clipping one diode.
(4.) 2006 is 400 channels and faster scanning. The 2022 is a good scanner.
I have both a 2022 and a 2006. I can tell little difference in quality
and operation with the exception of the above mentioned channel capacity
and speed. The 2006 does have "sound squelch", a switchable backlight,
wide FM, and wider frequency coverage which explains the increased cost.

Al,

I've seen those same freq ratings, but think its more important to observe those freq limits when transmitting than when receiving only.

Coax connectors are generally designed at a characteristic impedance to match that of a particular coaxial cable. The UHF connector, however, is designated 'non-impedance' and hence its relatively low freq rating (300Mhz) below which it won't contribute a significant amount of signal/power loss. So, it can be used in either a typical 50 or 72 ohm coax cable. Other connectors like BNC and N should be used only with the proper impedance, and size of cable. Mismatched impedances are not desireable in transmitting applications because some of the forward power can be reflected back towards the transmitter from the point of the impedance mismatch or 'bump'. This could also take place if the cable were pinched/smashed. The coax impedance is largely due to the size of the conductors, and spacing between the inner conductor and the braid, so anything that changes this will affect the impedance, whether a connector or flattened cable. In receiving, these reflections would also occur, but the voltages on the cable are much weaker so the same problems do not result.

Besides the impedance rating, connectors can conduct various amounts of power. For instance, an UHF or N connector can carry more power (important when transmitting) than a BNC, F, RCA Phono or Motorola male connector.

Another consideration is the installation method. UHF's are rather forgiving, but moving up to BNC's and N's require a bit more care and diligence in measuring the cuts to do the job correctly. Either soldering or crimping can be used, but the proper style of connector needs to be purchased. And crimp tools cost additional, esp. for those capable of the larger RG8 size connectors.

Two major rf connector mfrs are "Amphenol" and "AMP". Just taking a quick look, I didn't notice any general info on either of their Web pages regarding basic connector theory. You might try locating a local Amphenol rep, and see if you can get one of their connector catalogs. At one time Amphenol also had a nice diagram that showed the freq ranges for each connector type.

Bottom line...UHF type connectors would probably still get an "A" grade for letting almost all the rcvd signal thru, but to get an "A+" for U.H.F. or higher frequencies, one would probably want to look into using a BNC or N connector.

But Morse is the ONLY mode with its own pass/fail element. One can
simply ignore all of the questions on, say, RTTY, and still get a
full-privilege HF license ... not so for Morse ... that special status
is NOT deserved by a nearly 150 year old technique that the rest of the
world has abandoned.

> manual and push buttons.

If all you want to do is be an appliance operator, perhaps ... but
that's "CB" not ham radio ... a ham license allows (encourages, nearly
demands) one to build, tinker, experiment, adjust, design, and generally
fiddle around ... and that requires technical knowledge ...

> Your argument has no merit.

NO, *YOUR* argument has no merit ...

> It is technical hazing.

Since it is demonstrably necessary and reasonable, it is not
hazing ... Morse testing meets neither criteria ...

> It has nothing to do with compliance and safety.

It (theory testing) has EVERYTHING to do with compliance and safety.

> The fact that the ability to recite these theories is unnecessary makes
> the imposition of a theory testing "requirement" arbitrary and
> unjustifiable. Sounds familiar, eh?

But your assertion that theory is "unnecessary" is bogus, thus
your conclusions are likewise bogus ...

I have a text file describing this mod if you want it. I dl'd the file with the intention of performing it on my Pro-39 (not to listen of course, just to test my skills with electronic components) but have never gotten around to it. You would probably like to know where it came from, but truth to tell, I can't remember as it has been a while.

>copies of it made. Perhaps we could get all of RS's "restricted" manuals on a
>CD (I can make those, too) in HTML format?
>
One of the problems I see here with RS decision to limit the service manuals
is that it limits who can make repairs to the equipment.I would think this
would fall under the restriction of fair trade as you would now HAVE to go
to RS for any repairs.I believe this monopolizes service on a non-proprietary
piece of equipment.I will no longer do business with RS and have also
requested that we cease doing any corporate business with them.I think RS
may have grabbed the wrong tiger by the tail.

Calgary City Police upgraded to a new digital system a couple of weeks ago, supposedly a trunking system in the 800 mhz area and my Pro-43 is now kinda useless. I checked with several RS stores in this city and only one clerk thought a new handheld was slated for release sometime before Christmas. The other clerks all said no new scanners were on the way, and one person stated that there is a non-RS scanner out there in the $2,000 range that can do the job. Can someone help in recommending a proper scanner for this, along with sources please. Thanks very much.

Source record: 182962

It's probably a bit late to be asking this question, as I just sent in my check for the purchase of PerCon's Spectrum CD, but I'm curious of people's opinions on each ot these two frequency databases.

I just learned of ScannerBase recently, and downloaded the demo. It seemed pretty nice, but the interface seemed to be lacking a bit...however, it seemed to offer the info that I was interested in.

I think my question to the group is which database do you prefer? If you've only used Spectrum or ScannerBase respectively, what did you like and dislike about either database?

Thanks very much for your input in advance.

Best,
Jeff Vickery

>I've sat here and read the last 30 or so messages about Morse Code,
>all the good points and the bad points. It seems to me that many
>don't want to take the time and effort into learning the Code.

Why should someone who will never, ever work CW have to learn Morse?

>I understand that it takes time and
>isn't easy but the FCC has built the Amateur testing in a incentive
>program. The faster you learn the code the more places you can go.
>The more things you can do.

But why should code be the deciding factor in having more privileges that, for the most part, do not involve CW at all? You are accepting the Morse requirement as status quo. I question the validity of requiring it at all.

It's like corporate dress codes. Wearing a suit and tie is inconvenient, uncomfortable, and has nothing whatsoever to do with the value or talent of an individual. Yet, it is the required "uniform" for most well-paying jobs. People should be able to wear what they want, what they feel most comfortable in -- they would be happier, more productive employees. Yet, it is the "powers that be" and the "status quo'ers" (the ones who say "well, that's just the way it is -- if you don't wanna wear a suit, be a damn ditch-digger or sumpthin'") who keep this facetious mentality alive. "I had to wear a suit every day for 30 years -- why should YOU be allowed to work in comfort?" Doesn't that sound a lot like "I had to learn code to ultimately become Extra Class -- why should YOU be able to work those frequencies without it?" The world would be a better place if people lost their hang-ups about "the way things are," took a more critical look at the premises behind our societal conventions, and did away with what is irrelevant or outdated.

>The code is one of the aspects tested by
>the FCC to assure a most basic of radio knowledge.

Radio knowledge should have nothing to do with learning an operating mode one will never use, or for that matter (to use another example) having any knowledge about constructing or repairing equipment. Such knowledge was paramount 50 years ago, but now there is all the "off-the-shelf" equipment one needs, and design, construction, and repairs are best left to the pros. Radio should be about COMMUNICATING, pure and simple. I couldn't care less about what goes on inside the "box" -- I'm only interested in using the box to communicate.

>Amateur radio is a
>hobby.....most people enjoy their hobbies and attempt to learn as much

>as there is to be offered from it.

I happen to be a musician, with my particular area of specialty being Baroque and Classical music. I would be incensed if, in order to join a musician's union, I was required to have intricate knowledge of jazz, country, rap, or heavy metal, when I have no intention of ever performing in those styles. My lack of knowledge in those genres does not diminish the pleasure I derive from music one whit, nor does it make me any less of an artist.

>I enjoy learning it and hope to increase my speed each day.

Good for you!! However, *I* don't. And my ability to operate efficiently and professionally in voice, packet, ATV, or any other mode is not enhanced by knowledge of a mode that most other radio services have all but abandoned. Ham Radio is slowly dying -- that death will come quickly if hams do not change with the times and prepare for the 21st Century.

1411. FS: AR3000 Scanner

I have an AR3000 that I would like to sell. The unit covers from 100 kHz to 2036 MHz without gaps. Modes are NFM, WFM, AM, USB, LSB and CW. This is a terrific radio in very good condition. For computer control, I will also include a current version of ScanCat Gold, PerCon Frequency CD, plus additional frequency disk (originals, not copies). Also 12v cigarette lighter adapter and AC adapter. This is one of the best.

I am open to offers and may consider a trade for a laptop and/or ???

The current model 3000A (cellular blocked) costs approximately $1100.

If interested, e-mail jolson@twistedpair.net

Perhaps true, but irrelevent.
As you stated yourself, the cheap price was for an "outdated" (at least with respect to the fad) model. Had you looked at your same 23-channel when the faddish people still wanted them, you'd have found them closer to $150. The only reason it was marked down was to clear it off the shelf for models the retailer thought they could sell for more profit.
And that's not in constant dollars. In 1997 dollars, that unit would be pretty expensive.

Right you are. the RC bunch wants the same thing in batteries we do:
high capacity, easy recharging, long cell life, small size, LOW PRICE.

I've picked up some neat packs for various applications there.

If by "it" you mean "Morse," I guess you're right ... but it hasn't got
a damned thing to do with RADIO ...

> If someone feels better by calling that an "elitist" practice, I can
> only guess that that person either hasn't the desire or hasn't the ability

> use by non-technical folks have some sort of ulterior motive.

Where the *hell* did you get the idea that that's what we
(those opposed to Morse "requirements") want??? Morse has
NOTHING to do with RADIO and even LESS to do with TECHNICAL ABILITIES.
In fact, it has been my experience as a technical professional that
the major reason many technical experts avoid ham radio is MORSE.

By the way, Scott, please don't waste your time or mine by sending
me any more obnoxious e-mails if you are not willing to at least provide
a valid address for me to reply to ...

Maybe there is too little spectrum to go around. Maybe too many possible users.

So the selection procedure should be relevant.

Morse code hasn't been relevant for a long time. Technical knowledge is relevant to wise spectrum usage in this day and age.

Spectrum allocation to people whose highest and best use of intellect is 20 wpm is a waste of a valuable resource.

Morse code requirements are a way of culling out people that aren't "into" it. If someone feels better by calling that an "elitist" practice, I can only guess that that person either hasn't the desire or hasn't the ability to put out the small effort to join the "elite", and thus the amateur community is probably better off without that person.

I can't help but think that the people who want to "open up" Ham bands for use by non-technical folks have some sort of ulterior motive. Like they are trying to mold the service into something else. Like a "free" alternative to commercial radiotelephony services. Or their personaly 2-way communication service.

Amateur Radio is not the only game in town. I say, pay the dues or play a different game.

Yes, well, by far the best caliber for assassination is a .22 anyway,
unless you're talking about long-distance snipering, in which case
you're probably not going to be as concerned with rifle report anyway.

NO scanner will scan the CPS's new DIGITAL trunk. I believe, however, that you can, if you are a legitimate media outlet, purchase a receive-only portable radio from CPS's communications division. I've heard $4000 once and "well over $5000" a couple of times. I've also heard that if radio owners abuse the privilege, their radios will be programmed over-the-air to basically shut down, making them go silent for a very long time (ie. forever)..

On the other hand, Calgary Fire Department and Calgary EMS are going to go to a new ANALOG trunk in the next couple of weeks. It will be perfect for TrunkTracker users.

The last time I made a guesstimate as to conversion to Canadian funds, I was looking at about $406 for a TrunkTracker from Grove (I think).

As to the comment at the top about the PRO-43 being useless--I can fill up 50% of the memories on mine with local Fire/EMS/RCMP frequencies that can be heard from most parts of the city. Don't toss it in the dumpster yet!

I have received via mail a credit card charge for a Service Manual I ordered recently for a Pro-2045 scanner. They accepted the order and charged my credit card.

This was ordered at least a WEEK after all of this brouhaha started. Apparently, it isn't a ban on ALL service manuals, or even ALL scanner service manuals.

It will be interesting to see how this all shakes out.

Ah, but that is not what people are saying. What people are saying is that testing Morse code OPERATION does place it in a unique position about the level of testing that is done for all other modes. People aren't interested in getting rid of Morse, but rather only the requirement to demonstrate proficiency as a prerequisite for HF operation.

Steve,
Those battery packs aren't as proprietary as you think. There's tons
of places, running the gamut from Digi-Key, to your local radio shop, to
some radio control battery suppliers, that can provide replacement packs
for Uniden radios. Many times you can even get a much higher capacity
in the same size pack.

As for preference, I prefer being able to use Alkalines in a pince
myself, but the NiCd packs aren't a plan by Uniden to make you buy
replacements from them.

Unless they are truly encrypted, there is a program called mdtstuff
that might be able to handle the MDTs if they are using a 4800 baud
signal. The members-only scancat site has it, and no doubt there are
others. For that you need a scanner with a discriminator tap, a
computer and an interface (not a TNC) that you can build rather easily.
Note that I understand that some departments are using a 9600 baud
signal, and mdtstuff won't deal with that (I think- corrections
welcome).

True. but then they'll put interconnection boxes
that pickup the signal and shove it on the next line
down, and so on - multiplexers and all. Who said
there'd be no more infrastructure? <g> It won't be
cheap, and for all it's going to be worth, pointless.

I still don't see how the morons get to pull big
appearances on international TV for all their gag
internet phone technology. All video, audio and
data goes over comms channels aka phone lines and
sat links. It pisses me off these fools do this,
because the telcos OWN the whole damn lot anyway,
and migration of voice services to the internet
will eventually drive internet access prices higher.

Believe me, I will not be happy paying double for
for my net access because shitheads want to play
'cheat the telco' games with it.

Multimedia and entertainment on the net? No way!
That's what I got a TV, Video, CD and Radio for.
I suppose we'll all end up with 6 or 7 computers
around the house to replace all the TVs and VCRs
etc for these mythical megaband on-demand services!

I want my 100cm TV, Surround Sound/THX/AC3, DVD and a nice
little desktop 500mhz 10gig 256meg PC all separate,
thanks! I don't like the idea of trying to restart

a movie when Windows 2000 chucks a fit over something
trivial...

Hello Everyone,
Acquisition of new equipment forces me to sell my AOR 1000XT. Frequency coverage is from .530kc to 1.3Ghz, continuous. Receives AM,NFM,and WFM. Has 1000 memories, 10 banks of 100 channels. Recently replaced stock bnc connector with a Mil-Spec bnc featuring a gold plated solid center sleeve. Radio is in good condition, comes with the following: High performance rubber duck, leather case, cigarette lighter plug, nicads, charger, and Howard Borenstein's informative book explaning the radio's features and such. Asking $250.00 firm, I'll pay shipping upon receipt of cashier's check, or certified money order.

If that happens you toss the scanner and buy a new one. The money you
saved by not buying a lot of batteries over several years will probably pay

for a new scanner and by that time you will want a new one anyway.

Not precisely. There are local and state restrictions on the possession
of a scanner in a vehicle. Amateurs, of course, enjoy pre-emptions, but
that doesn't stop police from occassionally siezing them, anyhow.

1457. AOR 5000+3 vs. ICOM R-8500 questions

Newsgroup: rec.radio.scanner
Date: 1997-10-15 00:00:00 UTC
From: Chris Cheyney <cheyney@mindspring.com>
Message-ID: <34446A0C.242FE29F@mindspring.com>
Source record: 183071

Howdy folks -

I'm looking to pony up for a serious scanner and after looking through the choices I've got (well, the realistic choices I've got -- Watkins-Johnson's a bit out of my price range :-)), I've settled on either the AOR 5000+3 or ICOM R-8500. Since these scanners are in the $2k price range in the US, which is fairly serious money, I'm interested in finding out what people like and don't like about them before I spend the money.

The ICOM R-8500 looks like a very cool communications receiver with solid performance. I like the range of add-ons available for it (including the FM stereo/TV one), but I don't like the limited range of filters for it compared to the AOR 5000+3. The limited coverage range compared to the AOR 5000+3 just isn't an issue ..... both will suit my needs just fine.

The AOR 5000+3 looks like a very serious communications receiver with a somewhat annoying layout that appears to be, like my Grundig Satellit 700, something you just get used to eventually. The selectable filters are good and the availability of special filtering for weather faxes is a definite plus, especially since the receiver may find its way onto a sailboat eventually. (VHF and HF transceivers would be, of course, not very far away.) The tests I've seen seem to indicate that the AOR performs a bit better than the ICOM ..... does reality bear this out?

If you had to choose between the two, which would you choose, and what would be the basis for the choice made?

I like both of them because they're 12 VDC based instead of 120/240 VAC, which means I can install them somewhere other than in a fixed location.

Both radios aside, the reality of antennas is that I don't have a lot of space either way (home or sailboat mounted) and I'm curious about how people have worked around space limitations to get the most out of both of these receivers. Obviously I'm looking at 3 antennas, HF and VHF for most of my use and UHF for other uses. What works that's not going to inconvenience me or put me in the poorhouse?

Anyhow, I'd appreciate any advice you folks have to offer ..... send mail if you can, I tend to read that more often than news .....

Thanks in advance .....

chris

I have a brunch of it, but not enough to be a player. If you have enough to get a seat on the board of a company then you get listened to. There are groups that buy a few shares so they can go to stock holders meetings and raise hell. The companies have been getting wise to them so it is now harder to protest in that fashion.

And even board members do not aways have a big say. If one or at least a few players hold 51% of the stock, they get to do all the talking.

Most of the time it is we give you a good return on your money so shut up. Just like the unions, you got more money why would you want a say in how the company is run.

I've sat here and read the last 30 or so messages about Morse Code,
all the good points and the bad points. It seems to me that many
don't want to take the time and effort into learning the Code. I'm
not even of age to drink and got my license before there was even an
option in learning the code. I understand that it takes time and
isn't easy but the FCC has built the Amateur testing in a incentive
program. The faster you learn the code the more places you can go.
The more things you can do. The code is one of the aspects tested by
the FCC to assure a most basic of radio knowledge. Amateur radio is a
hobby.....most people enjoy their hobbies and attempt to learn as much
as there is to be offered from it. I personally hope the Code stays,
I enjoy learning it and hope to increase my speed each day. Best of
luck to all who take the test!

Wow, aren't you guys in the dark regarding battery packs. Simply take your pack into a reputable hobby supply store and they can replicate the EXACT pack you have and even increase the MaH capacity if needed. I'm sure they'll charge you HALF as much as a replacement pack.

I've priced a brand new BC200XLT six cell battery pack for under $14.00 at a hobby supply store. This was for a set that had more Mah hrs. and was more charge friendly.

I recently bought something called The Pouch for one of my handhelds. It's made of neoprhene-something or other (that swimsuit stuff) and cost only $15, plus $3 shipping. It ably protects the scanner from falls and bangs but does not permit you you actually operate the scanner (no cutouts). On the other hand, the manufacturer's leather case is close to $30; a version made by Design EQ (?) sells for $35, which is outrageous. Bought Pouch from a web site--can't seem to find the URL now, but its Sound Radio Products, so a search will turn it up. The Pouch company is at 800-727-6824. They make 'em for a wide variety of scanners.

Oh, come on! While I may agree with the overall concept you state, the above excuse for silencers is pretty lame. They not only shorten range of the projectile, but are detrimental to the accuracy too. And while neighbors may be happy not to hear the shots of drive by shooters, they might want to know when they occur so as to check on the kids. (We've had a number of kids killed in their own homes this past year in California by drive-by shootings.

Suffolk Cty Radio Techs are testing the National TAC-3
Freq (867.5125 with a PL of 156.7 hz) in the
Huntington / Northport Area today Wed 10/15/97

This test is for determining the quality of signal
for use by Northport and Huntington Bay Police Dept.

It seems they are using a low power repeater in that area, since
Im located in Smithtown and its not as strong as it is when they are
using the "Main" repeaters. But I can hear them pretty well.

Enjoy,
Keith

I am selling a Bearcat 760xlt. The scanner comes with the optional CTCSS board and receives cellular. The unit has 200 memory channels, (100 extra) configured in two banks of 100. You can toggle between each bank of 100 channels with a rear mounted switch. The unit has a Hi-Capacity lithium battery for memory back up. Unit includes a wall cube for indoor use. Unit is in very good condition. First $150.00 gets it. (Shipped) e-mail for more info.

>finding out what people like and don't like about them before I spend
>the money. ...

I'm not familiar with the differences (if any) between
the AOR 5000+3 and AOR AR-5000.

I've tested both an AOR AR5000 and ICOM R8500 and published
full length reviews and comparisons in Monitoring Times magazine.
They are both great radios, but I chose to purchase R8500 after
testing both.

Here are the passages I wrote in my FAQ "Buying a Used Scanner:"

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage
super receiver. Good sensitivity throughout. AM, SSB, CW,
FM detectors. Frequency readout to 1 Hz. More features
than any other radio. DTMF reader and RS-232 interface
included. Multiple settings for IF and AF selectivity,
attenuator, AGC, deemphasis, etc. DB9 RS232C connector.
Negatives include low contrast LCD display and difficult
user interface. NFM squelch closes slowly, causing noise
burst at end of each NFM transmission. Electromechanical
relays click at various frequency boundaries, including 400
MHz, producing a clickety-clack noise -- annoying while
scanning banks of mixed band frequencies. Great radio,
otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob
Parnass, in Monitoring Times, December 1996.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks
of 40 channels although bank sizes can be changed. 100 Auto
store and 100 Skip memories but that can be increased by
reallocating channels from the conventional scan banks.
Fixed and programmable step sizes. Relays clickey-clack
while scanning across band boundaries. Triple conversion,
First IF is 48.8, 778.7, or 266.7 MHz, depending on band.
Second and third IFs are 10.7 and 0.455 MHz. Weak to
moderate cellular images starting near 1106 MHz. Rugged
construction. External power supply. DB25 RS232C
connector. Audio peak filter. Ok scanning and great

searching performance. See "ICOM R8500 Receiver," by Bob
Parnass, in Monitoring Times, January 1997.

Reprints of articles from Monitoring Times are available
for $3.00 US each plus a self-addressed stamped envelope from:

Grove Enterprises, P.O. Box 98, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $3.00.

I've enjoyed owning and used a NRD535D for a few years
and much prefer the NRD535D over the AR-5000 for shortwave utility
listening. Its variable bandwidth and IF notch filter
are two important features lacking in both the AR-5000 and R-8500.

That said, I found the R8500 better suited for SWL than
the AR5000 due to its IF shift and AF peak capabilities.

The AR5000 I tested had more uniform sensitivity in the
1000 - 2000 MHz range than the R8500.
The AR5000 has more features than the R8500 for UHF/VHF
monitoring.

The AR5000's LCD contrast is poor, making it more difficult to read.
I found maddening its complex multi-keystroke sequences, required
to perform simple operations. Its 100 channel memory banks
are too large for organizing frequencies.

The R8500 is built massively on a cast metal chassis.
The AR5000 is smaller and much lighter in weight.
I found what looked like a few extra components "tack soldered"
on the bottom of at least one printed circuit board in
the AR5000 I tested.

Overall, the AR5000 is more flexible (except in memory bank
organization), but the R8500 is better built and much easier to use.

Good luck.

> mail if you can, I tend to read that more often than news .....

Please follow good Netnews etiquette and post a summary of the
responses you receive.

I don't understand this mentality at all.

First of all, I don't understand why anyone should have to demonstrate
"dedication" to a hobby. I don't understand why some arbitrary distiction
of "achievement" should grant people special priveleges. I am sorry, I just
don't get it.

Being able to copy code at 20wpm demonstrates one thing, and one thing only:
the ability to copy code at 20wpm. It's an achievement, sure, just like
riding a bicycle is an achievement and getting to work on time is an
achievement. I think that drawing any conclusions about the technical
competency or dedication of such an individual is quite a stretch...

Ham radio has been a hobby for most of this century for people
world wide. Investment in terms of money, time and intelligent radio
development infinitely exceeds those of citizens band which is only a
very basic short range communications facility. The difference between
the two Radio Services defies comparison.
Because of the international nature of Ham Radio, it was
necessary for the ITU to develop international regulations for this
Service, which enjoys many international allocations across the RF
spectrum. If it became unregulated, it would become chaotic. It is
necessary to licence the amateurs in order to maintain an orderly use of
these pieces of allocated spectrum. Don't get caght up in whether or not
amateurs should be licensed, be concerned about the regulations
pertaining to licensing which is done world-wide by individual national
administrations.

Source record: 183108
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Everyone,

I have recently compiled and posted a web page with the following for Dallas / Ft. Worth Trunked Radio System Listeners:

- System ID's ,connect tones, control channels, subfleets and talkgroups for all of the Motorola trunked radio systems in use in the DFW area ...including some SMRs.

- TRUNKER.EXE specific information for the DFW Area. Data files, screen shots, and tips and techniques for using the trunker.exe application. You can also find the lastest version of trunker.exe (3.4.2) here also.

This page is also a good location to find trunker.exe application information....plus a really nice screen shot of my setup.

The Page is at:

http://web2.airmail.net/lblant1/dfw/dfwtrunk.htm

I'd like to hear from some Dallas / Ft. Worth listeners on their thoughts and information that they might have.

Enjoy the page, and as always -- comments are welcome!
-Lb

Hello to all.... I have the following items for sale (or trade?):

Motorola DPC-550 (EE3) BRAND NEW w/slim NiCd (NEW in box)
and battery charger. $100.00 obo

Nokia LX12C transportable phone - new (minus bag), comes with
power cord, transciever, handset, and antenna. $45.00 obo

Technophone BC900 transportable phone new in box. $40.00 obo

PAGERS:

Motorola LifeStyle Plus (Teal) - New on 929.8625 (POCSAG) $30.00

Motorola LifeStyle Plus (White) - Mint on 929.8625 (POCSAG) $30.00

Motorola UltraExpress (Black) - Mint on 929.8625 or 931.0375 - not
sure which frequency it is on, one or the other! (POCSAG) $40.00

All equipment is new, or mint condition as noted above. Prices plus
shipping from Grand Rapids, Michigan, USA. If you have any questions
or comments just drop me a line.

Great for the wife or kids to put in the car, can still use them to dial,
911 or calling card calls from most areas. Or can activate or upgrade
your current phone or pager as an inexpensive option.

Thanks for reading,
Eric - N8XHP

Yup, my 8K does the same thing. These are called features, er, make that bugs.

Bugs are left in the radio because the manufacturers don't always hire
careful testers like you...

Other radios have bugs too. For example, the 2010 messes up when making the
transition between LW and MW during a scan. But only if the MW step size is
10kHz.

It is rather amusing, in a sick sort of way, that the same government that jumps on the "health care" bandwagon on a regular basis, also helps to promote hearing loss in recreational shooters by not allowing the use of silencers. Intelligent shooters use ear and eye protection, of course, but it certainly would make life a bit nicer for the neighbors if silencers were allowed, as well.

Unfortunately, a great deal of the local pressure stems from people who don't understand the issues. Witness the great debate about "assault rifles." The government and the press go to great lengths to "inform" the public about how they are used by the "evil" criminals, in order to effect a ban on their manufacture and import. Of course, previously published (and easily researched) reports indicating that they are used, in the US, in between .3% and 2.5% of criminal assaults, are ignored. The average citizen has been made to believe that anyone who likes to make things go "bang!" is a deviant, at best, if not a potential mass-murderer. It's probably a good guess that none of them have even read the Bill of Rights, much less the Federalist Papers.

I recently finished a novel titled _Unintended Consequences_. It's an interesting story about the escalation of gun laws since the Firearms Act of 1934. The author needs a bit more practice when it

comes to storytelling, but the book does provide a useful, rational introduction to an uninformed reader about why gun laws are a threat to American citizens. I'd recommend it to anyone who has a reasonably open mind, but who questions the utility of current gun laws. And then I'd suggest looking up the court cases cited in the book to get their full background, as well.

I have finally finished writing the Scanning Anthem. I hope it helps us in
our fight to MAKE THE AIRWAVES FREE!!!
If any of you are interested in getting the musical score, please reply and
I will forward it. We will sing it during our March on Washington

Scan tall
Scan, and the world scans behind you.
Scan tall
With airwaves around you.
Scan from the highest of hills and below
Far below....
The winds bring the waves of the songs of the city.
Each thunderous clap of gun fire
Can be heard without a wire
Though miles have us parted
The airwaves carted our hearts away!!!
Yes scan when that's all you have left in you!
And no one
There is no one...
Who will ever take scanning away!
It's scanning I say!
I scan the world everyday
And no one...
Will ever...
Stop me from scanning!

From experience... The best & easiest way to track Cell Phone Calls is with a CTEK & an OKI 900, period. I've used lots of test gear, and this little setup did it ALL... Then I did something stupid, no I didn;t get caught... I sold it.

Chances are you will never find one though. N.W. stopped making em years ago & OKI 900's are long out of production...

good luck & happy snooping!

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down,

then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

WEBER ELECTRONICS
PO BOX 212
5138 LAUREL LN
BROAD RUN, VA 20137
telephone (540) 347-7760

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good

book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a

frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are

really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using

call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.

Well, Emilio, from your answer you appear to be the only "Ass" in this
discussion.
Why don't you give the guy a break, and get off your high-horse.

Howard Higgins

1510. Firearm silencers

Newsgroup: rec.radio.scanner
Date: 1997-10-16 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19971016014401.VAA06344@ladder02.news.aol.com>
Source record: 182919

One item overlooked in the previous posts is that silencers are only truely effective on weapons with a closed breech using relatively low-powered ammunition. By a closed breech I'm talking about a semi-automatic, bolt action or lever action. A revolver allows too much sound to escape from the barrel-cylinder gap. (Of course, that doesn't stop Hollywood from using them.) By relatively low-powered, I'm referring to ammunition with a muzzle velocity of less than the speed of sound (around 1100 feet per second, or so, at sea level). On faster ammunition up to half of the sound you hear is actually the bullet breaking the sound barrier.

1511. Repair Tips for Radio Shack Scanner Radios

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, | http://www.hwsams.com/sams_model_new.html

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies. It's clear from the discussions posted on the Internet that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a

diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046,

allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The new RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000

channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are

unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer

than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but

carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain selected business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national

scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities,

highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

- 2 -

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

1515. mobile phone cloning

Newsgroup: rec.radio.scanner
Date: 1997-10-16 00:00:00 UTC

Does anyone know if this method of cloning IMTS mobile telephones works? I found it somewhere on the Web, though I don't remember where.

BUILDING THE MOBILE PHONE

This is a list of the components you will need to build your own mobile phone:
1. Cassette Tape Recorder
2. Radio Scanner (Like those used to receive police calls).
3. Mobile phone dialer (build your own).
4. Low Power Transmitter (Modified 2-meter transmitter 1-5 watts).

HOW A MOBILE PHONE DIALER IS BUILT

Build a Wien-Bridge oscillator to generate the needed tones. These are commonly found in red boxes. If you don't have a red box schematic, look up a Wien-Bridge in an electronics textbook. Where you would normally connect a frequency adjustment pot, use two multi-turn pots connected in series. Power for the oscillator will be supplied by a 9 volt battery.
Obtain a rotary dial of the type used on rotary telephones. The dial will have four wires coming out of it: two white, one blue, and one green. The two white wires make a connection when the dial is off normal (moved from its resting position). Connect the two white wires in series with one of the leads from the 9 volt battery. The oscillator will be running only when the dial is moved off normal. It works like this: Dial is moved off normal-circuit is completed between oscillator and battery. Dial goes back to resting position-circuit is opened.
The blue and green wires go to a normally closed contact in the dial. This contact opens once for each pulse in a dialed digit. For example it opens

three times for the digit "3". Connect these two wires (blue and
green)
across one of the pots in the oscillator. With the dial in its resting
position, adjust the other pot for a frequency of 2150 Hz (Guard Tone).
Move
the dial until the contact opens and adjust the pot with the blue and
green
wires going to it for a frequency of 1633 Hz (Connect Tone).
When the dial is moved off normal, power will be applied to the
oscillator, and
it will begin running at 2150 Hz. When the dial is released the short
across
the second pot will be removed each time the contacts open for a dial
pulse.
During these pulse times the frequency will shift down to 1633 Hz.
When the
dial gets back to its resting position, power will be removed from the
oscillator. This will exactly duplicate the dial pulsing of a mobile
telephone.

THE TRANSMITTER

Antennae used by mobile phone base stations are located on high towers.
This
allows line-of-sight transmission to and from the mobiles. If you are
within
a few miles of a base station very little power is needed to establish
contact.
1 to 5 watts should be completely adequate. The less power you use,
the less
your chances of getting caught. More on this later.
2-meter transmitters, used in amateur radio, operate in the range of
144 to
148 MHz. With a change of crystals and a little retuning, you have
your
transmitter.

HOW A HOME BREW TRANSMITTER IS USED

With a scanner, locate the base station frequency which currently has
an Idle
tone on it. Switch to the mobile frequency on that same channel and
monitor it
with the cassette recorder running continuously. What you want is a
clean
recording of a mobile unit broadcasting its ID sequence. You also want
a
recordingof the disconnect tone when he hangs up. Once you have these,
rewind

the tape to the start of the sequence. Now you are ready to make a call.

THE PROCEDURE FOR MAKING A CALL
---

1. Set your scanner to the base station frequency with the Idle tone and leave
it there. Monitor with earphones to avoid audio feedback through the transmitter.
2. Set the transmitter to the corresponding mobile frequency. Turn it on and
leave it on.
3. Play the taped ID sequence.
4. Use your dial pulser to call the desired number. If all has gone well, you
will hear your dial pulses in the earphones. You can use this method to call
one of the special 800 numbers and whistle off with 2600 Hz; then MF to anywhere in the world. This technique will reduce your visibility on the bill
for the ID you are using.
5. When you are ready to hang up, play the disconnect tone and switch off the
transmitter.

A FEW NOTES ABOUT YOUR OWN SECURITY

You should only use as much transmitter power as necessary to maintain a
reliable contact. If you do much of this kind of experimenting, the FCC is
going to be after you with direction finding equipment. These use directional
antennae and a process of triangulation to locate illegal transmitters. If you
keep your power down, stay mobile, and avoid establishing a pattern of calling
at the same time every day, it will be nearly impossible to track you down.

Agreed. If they want to have tougher requirements for extra frequencies,
it should be more technical, not something that less than 1% ever use.

Hello Follow Hams,

The Fall cleaning is still going on. From my personal inventory comes the Kenwood TM-742A. Tri-Bander with Detachable Head. Radio has 2 meter and 440 bands in it and comes with the remote DTMF mic. I am the original owner and will let it go for $490 or best offer give or take. Those who know me from the flea markets know I keep my equipment in good condition.

Drop me a note or serious inquiries can also call me at my work number: 201-747-8595.

Will be willing to trade for a new Motorola Radius 16 pin 32 channel UHF high power and/or RIC for a repeater that I am building.

-CITE-
18 USC Sec. 2511

-EXPCITE-
TITLE 18 - CRIMES AND CRIMINAL PROCEDURE
PART I - CRIMES
CHAPTER 119 - WIRE AND ELECTRONIC COMMUNICATIONS INTERCEPTION AND
INTERCEPTION OF ORAL COMMUNICATIONS

-HEAD-
Sec. 2511. Interception and disclosure of wire, oral, or electronic
communications prohibited

-STATUTE-
(1) Except as otherwise specifically provided in this chapter any
person who -
(a) intentionally intercepts, endeavors to intercept, or
procures any other person to intercept or endeavor to intercept,
any wire, oral, or electronic communication;
(b) intentionally uses, endeavors to use, or procures any other
person to use or endeavor to use any electronic, mechanical, or
other device to intercept any oral communication when -
(i) such device is affixed to, or otherwise transmits a
signal through, a wire, cable, or other like connection used in
wire communication; or
(ii) such device transmits communications by radio, or
interferes with the transmission of such communication; or
(iii) such person knows, or has reason to know, that such
device or any component thereof has been sent through the mail
or transported in interstate or foreign commerce; or
(iv) such use or endeavor to use (A) takes place on the
premises of any business or other commercial establishment the
operations of which affect interstate or foreign commerce; or
(B) obtains or is for the purpose of obtaining information
relating to the operations of any business or other commercial
establishment the operations of which affect interstate or
foreign commerce; or
(v) such person acts in the District of Columbia, the
Commonwealth of Puerto Rico, or any territory or possession of
the United States;
(c) intentionally discloses, or endeavors to disclose, to any
other person the contents of any wire, oral, or electronic
communication, knowing or having reason to know that the
information was obtained through the interception of a wire,
oral, or electronic communication in violation of this

subsection; or
(d) intentionally uses, or endeavors to use, the contents of any wire, oral, or electronic communication, knowing or having reason to know that the information was obtained through the interception of a wire, oral, or electronic communication in violation of this subsection;
shall be punished as provided in subsection (4) or shall be subject to suit as provided in subsection (5).
(2)(a)(i) It shall not be unlawful under this chapter for an operator of a switchboard, or an officer, employee, or agent of a provider of wire or electronic communication service, whose facilities are used in the transmission of a wire communication, to intercept, disclose, or use that communication in the normal course of his employment while engaged in any activity which is a necessary incident to the rendition of his service or to the protection of the rights or property of the provider of that service, except that a provider of wire communication service to the public shall not utilize service observing or random monitoring except for mechanical or service quality control checks.
(ii) Notwithstanding any other law, providers of wire or electronic communication service, their officers, employees, and agents, landlords, custodians, or other persons, are authorized to provide information, facilities, or technical assistance to persons authorized by law to intercept wire, oral, or electronic communications or to conduct electronic surveillance, as defined in section 101 of the Foreign Intelligence Surveillance Act of 1978, if such provider, its officers, employees, or agents, landlord, custodian, or other specified person, has been provided with -
(A) a court order directing such assistance signed by the authorizing judge, or
(B) a certification in writing by a person specified in section 2518(7) of this title or the Attorney General of the United States that no warrant or court order is required by law, that all statutory requirements have been met, and that the specified assistance is required,
setting forth the period of time during which the provision of the information, facilities, or technical assistance is authorized and specifying the information, facilities, or technical assistance required. No provider of wire or electronic communication service, officer, employee, or agent thereof, or landlord, custodian, or other specified person shall disclose the existence of any interception or surveillance or the device used to accomplish the interception or surveillance with respect to which the person has been furnished a court order or certification under this chapter, except as may otherwise be required by legal process and then only after prior notification to the Attorney General or to the principal prosecuting attorney of a State or any political subdivision of a State, as may be appropriate. Any such disclosure, shall render such person liable for the civil damages provided for in section 2520. No cause of action shall lie in any

court against any provider of wire or electronic communication service, its officers, employees, or agents, landlord, custodian, or other specified person for providing information, facilities, or assistance in accordance with the terms of a court order or certification under this chapter.
(b) It shall not be unlawful under this chapter for an officer, employee, or agent of the Federal Communications Commission, in the normal course of his employment and in discharge of the monitoring responsibilities exercised by the Commission in the enforcement of chapter 5 of title 47 of the United States Code, to intercept a wire or electronic communication, or oral communication transmitted by radio, or to disclose or use the information thereby obtained.
(c) It shall not be unlawful under this chapter for a person acting under color of law to intercept a wire, oral, or electronic communication, where such person is a party to the communication or one of the parties to the communication has given prior consent to such interception.
(d) It shall not be unlawful under this chapter for a person not acting under color of law to intercept a wire, oral, or electronic communication where such person is a party to the communication or where one of the parties to the communication has given prior consent to such interception unless such communication is intercepted for the purpose of committing any criminal or tortious act in violation of the Constitution or laws of the United States or of any State.
(e) Notwithstanding any other provision of this title or section 705 or 706 of the Communications Act of 1934, it shall not be unlawful for an officer, employee, or agent of the United States in the normal course of his official duty to conduct electronic surveillance, as defined in section 101 of the Foreign Intelligence Surveillance Act of 1978, as authorized by that Act.
(f) Nothing contained in this chapter or chapter 121, or section 705 of the Communications Act of 1934, shall be deemed to affect the acquisition by the United States Government of foreign intelligence information from international or foreign communications, or foreign intelligence activities conducted in accordance with otherwise applicable Federal law involving a foreign electronic communications system, utilizing a means other than electronic surveillance as defined in section 101 of the Foreign Intelligence Surveillance Act of 1978, and procedures in this chapter or chapter 121 and the Foreign Intelligence Surveillance Act of 1978 shall be the exclusive means by which electronic surveillance, as defined in section 101 of such Act, and the interception of domestic wire and oral communications may be conducted.
(g) It shall not be unlawful under this chapter or chapter 121 of this title for any person -
(i) to intercept or access an electronic communication made through an electronic communication system that is configured so that such electronic communication is readily accessible to the

general public;
(ii) to intercept any radio communication which is transmitted
-
(I) by any station for the use of the general public, or that
relates to ships, aircraft, vehicles, or persons in distress;
(II) by any governmental, law enforcement, civil defense,
private land mobile, or public safety communications system,
including police and fire, readily accessible to the general
public;
(III) by a station operating on an authorized frequency
within the bands allocated to the amateur, citizens band, or
general mobile radio services; or
(IV) by any marine or aeronautical communications system;
(iii) to engage in any conduct which -
(I) is prohibited by section 633 of the Communications Act of
1934; or
(II) is excepted from the application of section 705(a) of
the Communications Act of 1934 by section 705(b) of that Act;
(iv) to intercept any wire or electronic communication the
transmission of which is causing harmful interference to any
lawfully operating station or consumer electronic equipment, to
the extent necessary to identify the source of such interference;
or
(v) for other users of the same frequency to intercept any
radio communication made through a system that utilizes
frequencies monitored by individuals engaged in the provision or
the use of such system, if such communication is not scrambled or
encrypted.
(h) It shall not be unlawful under this chapter -
(i) to use a pen register or a trap and trace device (as those
terms are defined for the purposes of chapter 206 (relating to
pen registers and trap and trace devices) of this title); or
(ii) for a provider of electronic communication service to
record the fact that a wire or electronic communication was
initiated or completed in order to protect such provider, another
provider furnishing service toward the completion of the wire or
electronic communication, or a user of that service, from
fraudulent, unlawful or abusive use of such service.
(3)(a) Except as provided in paragraph (b) of this subsection, a
person or entity providing an electronic communication service to
the public shall not intentionally divulge the contents of any
communication (other than one to such person or entity, or an agent
thereof) while in transmission on that service to any person or
entity other than an addressee or intended recipient of such
communication or an agent of such addressee or intended recipient.
(b) A person or entity providing electronic communication service
to the public may divulge the contents of any such communication -
(i) as otherwise authorized in section 2511(2)(a) or 2517 of
this title;
(ii) with the lawful consent of the originator or any addressee

or intended recipient of such communication;
(iii) to a person employed or authorized, or whose facilities are used, to forward such communication to its destination; or
(iv) which were inadvertently obtained by the service provider and which appear to pertain to the commission of a crime, if such divulgence is made to a law enforcement agency.
(4)(a) Except as provided in paragraph (b) of this subsection or in subsection (5), whoever violates subsection (1) of this section shall be fined under this title or imprisoned not more than five years, or both.
(b) If the offense is a first offense under paragraph (a) of this subsection and is not for a tortious or illegal purpose or for purposes of direct or indirect commercial advantage or private commercial gain, and the wire or electronic communication with respect to which the offense under paragraph (a) is a radio communication that is not scrambled or encrypted, then -
(i) if the communication is not the radio portion of a cellular telephone communication, a public land mobile radio service communication or a paging service communication, and the conduct is not that described in subsection (5), the offender shall be fined under this title or imprisoned not more than one year, or both; and
(ii) if the communication is the radio portion of a cellular telephone communication, a public land mobile radio service communication or a paging service communication, the offender shall be fined not more than $500.
(c) Conduct otherwise an offense under this subsection that consists of or relates to the interception of a satellite transmission that is not encrypted or scrambled and that is transmitted -
(i) to a broadcasting station for purposes of retransmission to the general public; or
(ii) as an audio subcarrier intended for redistribution to facilities open to the public, but not including data transmissions or telephone calls,
is not an offense under this subsection unless the conduct is for the purposes of direct or indirect commercial advantage or private financial gain.
(5)(a)(i) If the communication is -
(A) a private satellite video communication that is not scrambled or encrypted and the conduct in violation of this chapter is the private viewing of that communication and is not for a tortious or illegal purpose or for purposes of direct or indirect commercial advantage or private commercial gain; or
(B) a radio communication that is transmitted on frequencies allocated under subpart D of part 74 of the rules of the Federal Communications Commission that is not scrambled or encrypted and the conduct in violation of this chapter is not for a tortious or illegal purpose or for purposes of direct or indirect commercial advantage or private commercial gain,

then the person who engages in such conduct shall be subject to suit by the Federal Government in a court of competent jurisdiction.
(ii) In an action under this subsection -
(A) if the violation of this chapter is a first offense for the person under paragraph (a) of subsection (4) and such person has not been found liable in a civil action under section 2520 of this title, the Federal Government shall be entitled to appropriate injunctive relief; and
(B) if the violation of this chapter is a second or subsequent offense under paragraph (a) of subsection (4) or such person has been found liable in any prior civil action under section 2520, the person shall be subject to a mandatory $500 civil fine.
(b) The court may use any means within its authority to enforce an injunction issued under paragraph (ii)(A), and shall impose a civil fine of not less than $500 for each violation of such an injunction.

-REFTEXT-
REFERENCES IN TEXT
The Foreign Intelligence Surveillance Act of 1978, referred to in par. (2)(e), (f), is Pub. L. 95-511, Oct. 25, 1978, 92 Stat. 1783, which is classified principally to chapter 36 (Sec. 1801 et seq.) of Title 50, War and National Defense. Section 101 of the Foreign Intelligence Surveillance Act of 1978, referred to in par. (2)(a)(ii), (e), and (f), is classified to section 1801 of Title 50. For complete classification of this Act to the Code, see Short Title note set out under section 1801 of Title 50 and Tables.
Sections 633, 705, and 706 of the Communications Act of 1934, referred to in par. (2)(e), (f), (g)(iii), are classified to sections 553, 605, and 606 of Title 47, Telegraphs, Telephones, and Radiotelegraphs, respectively.

-MISC2-
AMENDMENTS
1986 - Pub. L. 99-508, Sec. 101(c)(1)(A), substituted ''wire, oral, or electronic'' for ''wire or oral'' in section catchline.
Par. (1). Pub. L. 99-508, Sec. 101(c)(1)(A), (d)(1), (f)((1)), substituted ''intentionally'' for ''willfully'' in subpars. (a) to (d) and ''wire, oral, or electronic' for ''wire or oral'' wherever appearing in subpars. (a), (c), and (d), and in concluding provisions substituted ''shall be punished as provided in

subsection (4) or shall be subject to suit as provided in subsection (5)'' for ''shall be fined not more than $10,000 or imprisoned not more than five years, or both''.
Par. (2)(a)(i). Pub. L. 99-508, Sec. 101(c)(5), substituted ''a provider of wire or electronic communication service'' for ''any communication common carrier'' and ''of the provider of that service, except that a provider of wire communication service to the public'' for ''of the carrier of such communication: Provided, That said communication common carriers''.
Par. (2)(a)(ii). Pub. L. 99-508, Sec. 101(b)(1), (c)(1)(A), (6), substituted ''providers of wire or electronic communication service'' for ''communication common carriers'', ''wire, oral, or electronic'' for ''wire or oral'', ''if such provider'' for ''if the common carrier'', ''provider of wire or electronic communication service'' for ''communication common carrier'' wherever appearing, ''such disclosure'' for ''violation of this subparagraph by a communication common carrier or an officer, employee, or agent thereof'', ''render such person liable'' for ''render the carrier liable'', and ''a court order or certification under this chapter'' for ''an order or certification under this subparagraph'' in two places.
Par. (2)(b). Pub. L. 99-508, Sec. 101(c)(1)(B), inserted ''or electronic'' after ''wire''.
Par. (2)(c). Pub. L. 99-508, Sec. 101(c)(1)(A), substituted ''wire, oral, or electronic'' for ''wire or oral''.
Par. (2)(d). Pub. L. 99-508, Sec. 101(b)(2), (c)(1)(A), substituted ''wire, oral, or electronic'' for ''wire or oral'' and struck out ''or for the purpose of committing any other injurious act'' after ''of any State''.
Par. (2)(f). Pub. L. 99-508, Sec. 101(b)(3), inserted ''or chapter 121'' in two places and substituted ''foreign communications, or foreign intelligence activities conducted in accordance with otherwise applicable Federal law involving a foreign electronic communications system, utilizing a means'' for ''foreign communications by a means''.
Par. (2)(g), (h). Pub. L. 99-508, Sec. 101(b)(4), added subpars. (g) and (h).
Par. (3). Pub. L. 99-508, Sec. 102, added par. (3).
Pars. (4), (5). Pub. L. 99-508, Sec. 101(d)(2), added pars. (4) and (5).
1984 - Par. (2)(e). Pub. L. 98-549, Sec. 6(b)(2)(A), substituted ''section 705 or 706'' for ''section 605 or 606''.
Par. (2)(f). Pub. L. 98-549, Sec. 6(b)(2)(B), substituted ''section 705'' for ''section 605''.
1978 - Par. (2)(a)(ii). Pub. L. 95-511, Sec. 201(a), substituted provisions authorizing communication common carriers etc., to provide information to designated persons, prohibiting disclosure of intercepted information, and rendering violators civilly liable for provision exempting communication common carriers from criminality for giving information to designated officers.

Par. (2)(e), (f). Pub. L. 95-511, Sec. 201(b), added par. (2)(e) and (f).
Par. (3). Pub. L. 95-511, Sec. 201(c), struck out par. (3) which provided that nothing in this chapter or section 605 of title 47 limited the President's constitutional power to gather necessary intelligence to protect the national security and stated the conditions necessary for the reception into evidence and disclosure of communications intercepted by the President.
1970 - Par. (2)(a). Pub. L. 91-358 designated existing provisions as cl. (i) and added cl. (ii).
EFFECTIVE DATE OF 1986 AMENDMENT
Amendment by Pub. L. 99-508 effective 90 days after Oct. 21, 1986, and, in case of conduct pursuant to court order or extension, applicable only with respect to court orders and extensions made after such date, with special rule for State authorizations of interceptions, see section 111 of Pub. L. 99-508, set out as a note under section 2510 of this title.
EFFECTIVE DATE OF 1984 AMENDMENT
Amendment by Pub. L. 98-549 effective 60 days after Oct. 30, 1984, see section 9(a) of Pub. L. 98-549, set out as an Effective Date note under section 521 of Title 47, Telegraphs, Telephones, and Radiotelegraphs.
EFFECTIVE DATE OF 1978 AMENDMENT
Amendment by Pub. L. 95-511 effective Oct. 25, 1978, except as specifically provided, see section 301 of Pub. L. 95-511, set out as an Effective Date note under section 1801 of Title 50, War and National Defense.
EFFECTIVE DATE OF 1970 AMENDMENT
Amendment by Pub. L. 91-358 effective on first day of seventh calendar month which begins after July 29, 1970, see section 901(a) of Pub. L. 91-358.

1520. Uniden's Poor Customer Service

Newsgroup: rec.radio.scanner
Date: 1997-10-16 00:00:00 UTC
From: Scott Brader <sbrader@usavgroup.com>
Message-ID: <34460479.2F4B@usavgroup.com>
Source record: 182929

After the experience my wife has recently had, I strongly discourage anyone from buying Uniden products. I have purchased Uniden phones, answering machines and scanners for years. I can assure you I never will again. Their customer service representative today HUNG UP on my wife when she called to complain about an ERROR THEY ADMIT MAKING!

My wife received a new BC80XLT as a Mother's Day gift. After only three months, the unit began malfunctioning. Since it was a gift she didn't have a receipt. The Uniden customer service representative told her they made no provision for gifts, you must have the receipt to receive warranty service, despite the fact that she had sent in the warranty card. After numerous calls, they finally agreed since the unit's serial number proved the manufacture date was within the one year warranty. I spoke with Heather Smith who agreed that the unit would be repaired under warranty. We sent the unit in. Approximately one and one-half weeks later, the UPS driver came to the door with a COD delivery from Uniden with charges for the service.

After a number of additional calls, the folks at Uniden admitted that they made a mistake, it should have been handled as warranty work. She was told to refuse the shipment and when the scanner was returned to Uniden they would "ship it back to her immediately with no charge." After two weeks, she called to check on the scanner. She was told that the package had been sitting at the dock since its return. They said they were terribly sorry, it was their mistake, they would try to ship it out within the next 48 hours. My wife said that isn't acceptable, they should see that it shipped today for delivery to her tomorrow since she's been waiting for a month now for what was supposed to be a couple of days and it was their mistake. The customer service representative, if you can call her that, named Michelle then proceeded to hang up on my wife.

I will never buy a Uniden product again and I will tell everyone I can about their terrible customer service every chance I get.

Source record: 182932

Zetron paging encoders are programmable. Most of the Motorla Quick Call ("1+1") codes actually require 4 digits on a Zetron (and on Motorola Centracom consoles), the format as follows:

"1423"
1 Timing code (in this case 1 second/3 second)
4 Tone Group (Group 4)
2 "A" Tone of the above group
3 "B" tone of the above group

In the above example 1423 would be 358.6 hz for 1 second, then 378.6 seconds for three seconds.

When 3 digits are used, the timing is assumed at 1/3 second, thus the above would be "423"

Also with the Zetron terminals, most paging formats can be programmed, such as 5/6, DTMF, Plectron, and custom calls. We used a Model 25 for several years and had bunches of different codes programmed in it for the several different agencies we toned out.

The actual code you punch in to tone out an agency is also programmable, so you can program in an existing ID number (such as a badge number) and have a totally unrelated type code come out. For example, you can program in Officer Jones (star number 100) to use 100 as his code, and uses one tone set, while Officer Smith (badge number 101), use 101 as his code, and have a totally different tone set or even a differen format.

Some dispatch consoles even go further. We have a new Modular Communications Systems center that is all done on a computer screen, and the system has preprogrammed tone buttons as well as a manual page screen that allows me to custom call various types of paging codes (DTMF, 1+1, Knox, etc)

A great source of paging and tone info is the Western PA Scanner Page at:

http://www.geocities.com/CapeCanaveral/Lab/1060/

A properly designed silencer has neither of those defects. You should check
out the silencers required in Finland. They are wiperless and have no more
effect on accuracy or velocity than a properly designed muzzle brake. They
use them in *competition*, and their scores are *very* competitive with
those of shooters not using silencers.

>And while neighbors may
>be happy not to hear the shots of drive by shooters, they might want to know
>when they occur so as to check on the kids. (We've had a number of kids
>killed in their own homes this past year in California by drive-by shootings.

And no doubt you've had a number run down by automobiles too, but you
don't require autos to run without silencers (mufflers) do you?

The overwhelming majority of shots fired are totally innocent of ill intent
or ill consequences, and shooters and the public would benefit if the noise
generated by those shots were silenced. Live next door to a firing range
for a while and then tell us if silencers are a bad thing.

What you are receiving, could be an image of cell phones or other local strong signal. What is the 'IF' spec of your scanner? Are you receiving what appears to be cellular? Do you hear the phones sending the zip zip sound like cellular, do you hear dialtone and then manual dialing or just converstion? Do you hear a courtesy beep during talking? Are the conversations full or half duplex? Send me the answers to these questions and I may be able to better help you.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.scanner,rec.radio.swap

*** FOR SALE or TRADE ****

Thruline Wattmeter, Model 4314 by Bird Electronic Corp.

Factory production model, not a type 43 with an aftermarket
kit. 26 page manual (reprint) with sections for intro, prep,
operating, maint., trouble shooting, calibration, repair and
replacement parts listing.

The unit is the same size and shape as a model 43, and has
2 additional controls near the bottom of the front under the
element cavity; one is for battery test, and the other is for
peak reading, which allows use of the meter as an average power
reading instrument also. Pain color is light gray, ID plate on
top of unit with model and serial #, spare element storage holes
on both sides, fuse holder and AC input, N connections input
and output. Rubber feet on both bottom and back, 110/220 input
selector switch on back.

Shows definite sign of use. Has paint chips on front, and one side
has paint sanded away on small area for an inventory control number
to be engraved, which is still visable.

$ 250.00, with the manual and charging cable for charging
internal battery from AC.

------ OR -----------

Will consider trades. Looking for good EPROM programmer, 2006
scanner, tube tester, R-417 receiver, Basic Stamp development system,
other test equipment, VHF/UHF gear or items related to computer
assisted monitoring of equal value.

Be my guest, if you get it to work, call me collect.

2600hz won't get ya what it used to unless you live in timbuktu where ESS isn't used.

1547. Voice Recognition

Newsgroup: rec.radio.scanner
Date: 1997-10-16 00:00:00 UTC
From: Paul Robertson <ve3hfq@netrover.com>
Message-ID: <01bcd9de$d483b620$1856bace@default>
Source record: 183006

Has anyone had any luck running a "voice recognition" file in conjunction with their scanner?

I would like to copy the local fire department who gives the alarms over the air, have them recognized by the software and print out the alarm information to a separate printer.
If anyone has mastered this aspect of the hobby would sure like to know the name of the software (voice recognition) and how you hooked it up to your scanner i.e, direct to the external speaker plug, or straight to the discriminator.

Regards,

Paul Robertson (VE3HFQ)

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring

Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can

be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged

construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after

looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high

pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but

very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not

recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory

channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually

unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50

frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge both Radio Shack's optional, monolithic NiCd pack, and AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals.

Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS |

JD-100: 1997 vintage. Limited 20 channel scanner which | covers civil and military air bands only. Good audio. | Large display shows frequency only out to 2 digits. Slow | scanning and odd keystroke sequences. No key press | confirmation beep. Cannot lock out channels from memory | scan. Powered by AA batteries. Battery saver circuit. See | "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in | Monitoring Times, November 1997. |

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with

flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock-outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the

country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas

Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, |
http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal

required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the

two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder
connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier
activated relay inside the BC890XLT wore out. Andy found
the identical relay sold at Radio Shack (part #275-232) and
says the BC9000XLT uses the same relay, too.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers

Trunked systems, in layman's terms, frequency hop. A
conversation between two deputy fire chiefs may occur on one frequency
and then suddenly, during a pause in the
transmission, the conversation will jump to an entirely different radio
frequency. In the meantime, two sewer workers,
in the same city or county as the fire chiefs, may suddenly occupy the
first frequency. Thus, it becomes almost
impossible to follow a complete train of thought.

On Wed, 15 Oct 1997 00:18:08 -0400,
in the newsgroup rec.radio.scanner,
Ken Isom <isomk@airmail.net>
from INTERNET AMERICA thoughtfully posted:

> Got this old Regency Scanner to work by replacing the
> membrain keypad with one from a Relm/Wilson 2510 for 16 bucks
> from Relm... although keys labeled slightly different.
> Everything works great on all 30 channels but how do
> you skip a channel when in scanning mode?
> Ken

Enter the two-digit channel number *while* it is scanning.

I answered this previously, here is a copy:

It follows the "Regency" programming style (mostly).

First of all, on this particular model, you cannot access a
channel directly (ie: <Manual> <1> <2>), you have to press
<manual> repeatedly to step to the desired channel (there's only
30 of them!).

Entry:

To Enter a frequency:

<manual> <X> <X> <X> <.> <X> <X> <X> <enter> <X> <X>

To enter 162.55MHz in ch 5, press

<manual> 1 6 2 . 5 5 <enter> 0 5

Channels below 10 must be preceded with a "0"

Lockout:

To lock/unlock-out a channel, IT MUST BE IN SCAN MODE! Enter in
the channel number to lock out (it toggles).

To lock/unlock channel 20 press:

<scan> 2 0

To lock/unlock channel 1 press:

<scan> 0 1

Search:

To search a range of frequencies, enter:

<manual> <search prog>

1 6 2 . 4 <enter> <lower> (the "1" key)

1 6 2 . 6 <enter> <upper> (the "2" key)

<search scan>

Press <search scan> to continue scanning if a undesired signal is received.

Note: The scan limits are very loose. It's sensitivity is only rated for the normal operating bands (Low, High & UHF). You can program it to scan/receive down to 1MHz, or as high as 819.99MHz, but it generally craps out below 28MHz and above 530MHz (this is *not* an 800 MHz scanner). If the PLL cannot achieve lock, it displays "error". Reception drops off near the edges.

The useful range on mine seems to be:

28MHz-53MHz

136MHz-185MHz

400MHz-530MHz

General info:

If you goof-up while entering a frequency, press <manual> to back out.

Pressing <delay> (the "." button) toggles between hold and delay modes.

Pressing <speed> during a scan slows the scan speed.

The keypad only lights up in the "night" mode.

By now, you have probably noticed that this unit has an obnoxiously loud beep. If you are "electronically inclined", I can tell you how to quiet it down. It just requires a resistor to be added.

Detector output:

The detector output is pin 10 of the 18-pin "600-565-1" chip, or the orange "D" jumper wire next to it.

It is a decent little radio: good selectivity and it has a "helluva" set of lungs (a 4" speaker and a 2W LM384 amp). BUT, it does cause interference to other radios (especially SW - radiated from keypad), and itself, and the squelch could be a little

"crisper" (I have not investigated that yet).

An external antenna is highly recommended. A "back-of-the-set"
antenna will pick up it's own radiated noise. Most of the noise
is processor generated and is radiated by the keypad.

Hope this helps!

Not much in the way of San Mateo County.

> San Mateo is a very very very large area and has many,
> many frequencies to program...close to 100 plus

Search 153.8 through 154.4 and 488.3 through 489.1 and you'll
find most of them.

> Sunnyvale Fire is 153.77
> for a start...

OOps! Sunnyvale is 482.7125, and has been for at least 12 years
(as far as I can tell). Both PD and FD are UHF.

153.77 is Palo Alto Fire. (A common mistake, since we both have a
"Fair Oaks" avenue :^)

Looks to me like you just burnt your hand on the stove.
To the person who wanted to know about a filter.....try an offline newsgroups reader like Forte Free Agent, and you can create your own filters.

Our county uses 9600 baud on the mdt system. I have tried to change 4800 to 9600 in the source code and compile it but it won't compile. It won't compile for the posted 4800 baud either. It comes up with 7 errors. has anyone figured out how to fix the errors to compile it. I am not a programmer and never used C before.

Customer Service rep's... a joke in clown's clothing

These people who answer their phones are beneath human.

I tried for days to get through on their 800 " we want you
to hold forever" number. After about a total of 1.5 hours
over a few days, I left a message on their voice mail.

What I asked was this: "Does UNIDEN, your company, repair
the MR8100 Scanner? PLease tell me yes or no. If I am not
in please leave the answer on my voice mail."

Simple request. Easy to do. "yes" or "NO we don't repair
MR8100's anymore".

Some stupido from Uniden calls and leaves a message from
the customer service division: barely able to enunciate
correctly. She said " please call Uniden at 800 etc.
so we can answer your question"....

I leave the rest up to the comedians

bill conduit
etc.

the 800 number is atrociously busy...all the time.

YES or NO

As it turns out David Bowie was the featured artist and I got into the show (
it was great) so I didn't have my scanner on. I did, however, scan a couple
hours before the show and picked up the "main wireless mike" going through
it's testing. This was on 171.045mhz. It was an MTV crewman I suppose. I
also could hear the "live" broadcasts from NYC studio, Ohio State, etc. on
this freq. Good luck at the other shows.

Hello All,

It's me again...some more Fall cleaning. This one is so old, I don't even remember the radio!! hahaha
I have the Bendix/King Mobile Communications Division Technical Services E-Series and L-Series UHF Radio Programming Sftware, Version 1.1 on a 5-1/4" floppy with the UHF Editor Maual and the Programming Cable Installation manual (LLA-0725) with schemtics for RS-232 interface.

I do NOT have the cables. Only God knows where it is in this mess!

Any reasonable offer will be accepted. I pay shipping via US Snail Mail.

A phone call over the "open" air is not a "private" call, by definition.
Note the word "open", in contrast to the word "private".

Find a news reader such as Forte Agent 1.5 which has extensive kill
list features. You'll need to learn how these features work, of
course, and you'll have to use those features ruthlessly.

(Standard Disclaimer: I'm not employed or otherwise compensated by
Forte. I'm just a satisfied customer.)

Now if only they could make the send button keep me from sending the
occasional flames and balderdash I sometimes emit, why then I'd really
like it ;-)

I have come to help you save yourselves. Too many of you have abused the power you purport to protect. Now the wheels of Karma are turning against you, and you look for answers and comfort.

You have been given the most powerful communications tool the world has yet seen - the Internet. Still you complain that your rights are being trampled upon. Can you not ease up on your shouts of discontent and let this process of communication/illumination grow naturally into a crown jewel of this civilization?

It was ever meant that you should be free to share your thoughts with each other. Each successive wave of technological advancement that your race has achieved has increased the possibilities for understanding among your peoples.

Those who misuse this awesome power will be corrected at first, but ongoing abuses will not be tolerated. Scannists who associate "rights" with "listening " are diluting the meaning of both words for those who do not yet grasp their meaning.

Listen to a private telephone call? Even the little children understand that this can not be right. And therefore such a "right" does not exist.

Before this generation worries about the constitution being trampled, they need to understand the right use of the word "rights". Even your forefathers had such a grasp.

I will periodically communicate with you further, but it is to your benefit to weigh these things in your hearts.

Even so - Emilio

>pickup.

Yes, but as Bill Cheek noted in MT a few issues back, since you are stuck with with the RS-232 connection you wont be able to take advantage of the higher data transfer rates available with an internal unit that's connected directly to the bus, IE the Winradio. Note the relatively slow scan/search speeds listed for the Icom box. I dont have the cash for the either, but if I did I think I'd go the winradio route. Interesting that in the icom ads the unit is directly next to the computer with a whip antenna attached. Looks good in print, I guess. Icom is also saying they wont release the protocols used by the unit so until someone hacks it dont look for after market software to run the contraption, you'll be stuck with icom software for the time being. Icom doesnt describe the software too well but it doesnt appear to do anything too spectacular, at least as far as compared to other computer control programs.

I have an unmodified ar8000 for sale. I have the original box and
power cords. as well as the original receipt and registration card from
Grove. I lost the manual in a move, but it is available from EEB for
$19.95. This is a "cellular restorable" unit if thats what you like,
purchased before the fcc pull. I'm asking for $450.00 for the unit and
it also comes with a stand alone DTMF decoder.
Please email (eroqua@aol.com) or call me at 312-816-3550

Sorry, but I don't think that is true. The first cell phone tests were done in Chicago either at the end of the 70's or the very early 80's if I remember correctly.

Most of us who were using "Portable Phones" at that time were using HandiTalkies that we had added a touch tone pad to and were running them on IMTS frequencies and repeaters.

Of course many of us were using Autopatch repeaters for years before Cellular Phones came into being, but that was only for non-commercial use. If you needed commercial communications the IMTS lashup was the only way to go... and with a 2 tone paging set up it even worked on your pager if you rocked it up on the IMTS VHF Frequencies.

The Bearcat 210, for example, predated Cellular Phones by several years.

Planet of the Grapes

http://www.potg.com/
See: Why everyone on the internet is talking about this progressive new website; why up until now, this site has grown simply by word-of-mouth.
Hear: The show that is breaking boundaries on the radio, making it an entertaining medium once more, and why certain sites have already heralded it as "the show that will redefine radio and will usher in a new style of comedy for the 21st century."
Taste: The difference between Planet of the Grapes' potent style of humor and the type of humor that makes you turn off your television or radio in disgust. The show's hosts guarantee that whether you like it or not, it is impossible to deny that it has a unique, fresh style.

The Hosts: Deaze Beans, Yahdderman, and U.B. Jackson
The Show : Planet of the Grapes
The Site: http://www.potg.com/
The Reason: Join the bandwagon that is headed into the future of comedy!

You mean how do you lock out a channel? Probably by just pushing the
channel number (2 digits). I'm not sure you even have to press the enter key
afterwords. Push the channel number again, and it unlocks.

Not that it belongs in this news group at all, but several years ago a
truly silenced revolver was debuted. It used a special seal at the end
of each chamber, on the cylinder. Gemtech seems to ring a bell.

>
>William R. James
>

Not a fair comparison. CB has 40 channels (only 23 orginally) while there
are thoursands of usuable frequencies amoung the various ham bands. The 70cm
band (442-450-Mhz) alone in 8 Mhz wide. Thats almost 8 times more frequency
space than the entire AM broadcast band. Allowing 15-Khz per channel- thats
over 533 channels!

cc.customer.relations@tandy.com; jroach@tandy.com

To whom this may pertain:

I am appalled at Radio Shack's new policy of no-sales
of service manuals for scanning receivers based on an alleged
request from the FCC. (I understand the FCC denies it!)
Regardless, the FCC does not regulate the publishing industry.

Hopefully Radio Shack will reconsider this ridiculous policy
and focus itself on what it does best: "You got questions. We've
got answers.", or in the vernacular: sales, sales, sales.

As an author and publisher, I have long touted Radio Shack
for having the best service manuals in consumer electronics.
If your no-manual policy is etched into stone, please be
assured that my support will be summarily withdrawn.

For the good of electronics and those who are interested
in electronics, I hope you will reconsider and terminate the
no-manual policy immediately.

Respectfully,

Bill Cheek

Gee, gosh.

I think they think that kissing the FTC's ass
is patriotic and politically expedient.

RS is a company owned by a very large corp who
does much business with the agencies within
the US government.

Seems corporations today want the help of our
government more than they want satisfied customers
who elect those bimbos put into office.

Bill, it is no surprise. RS kisses Ass. They
have to. It comes from above. A higher source.

Customers don't matter. Free exchange of ideas
are limited to what is "expedient".

After all, the majority of customers don't even
know how to spell: Bill of Rights.

bill conduit
etc.

Source record: 182823

I have used spectrum for about 4 years and will now only use ScannerBase. I was lucky in the fact that I got to test the program before it was put on the market. To be honest I find ScannerBase to be better. You don't have as many duplicate listings and you set your search ranges. You can also do multiple state searches with ScannerBase, with Spectrum you must do each state individually. I find with Spectrum your searches are limited. With ScannerBase they also show the expiration date of the license. I find this information helpful when going into a new area and looking for frequencies.

1615. ~~~Anyone comfirmed the cell mod

Newsgroup: rec.radio.scanner
Date: 1997-10-17 00:00:00 UTC

>I have used spectrum for about 4 years and will now only use ScannerBase.

I've used Spectrum (Percon) for a while too, and I have grown increasingly dissatisfied with it. Aside from the fact that its database engine is primitive, I have found many, many mistakes (such as the misspelling of town names, incorrect freqs and other gross errors).

I'm not familiar with the ScannerBase product, however, so I can't say if it's an improvement? Who publishes it? What does it cost?

Nice review of the Icom PCR-1000 PC-controlled blak-box-scanner in Shortwave Magazine, October 1997 edition. Has anyone played with one? I see you can have an unlimited # of banks of 50 memories each....I wonder:

-Can you lock and unlock any of the banks? that is, can I scan baks 1,3,4,5,9,23 and 50 at once...one would hope.

-Can I import a comma deliited file into the software?

-Can I at leat save the file as text so I can import it into Scan*Star or ScanCat for Windows?

-What kind of speed is it able to scan at?

Hoping it's a good one....

>
I don't know where you got your information from, but it's wrong. It is
illegal to listen to cellular phone calls (as well as cordless calls,
and some other types of transmissions).
The two people you refer to *were* prosecuted, and fined.

The problem with the law is that it is flawed on two counts:
it's next to impossible to enforce, and it ignores physical reality. Our
congresscritters are not concerned with either, as long as they get their
money for re-election.
How can we change this? One word:
VOTE!

>nctactical@aol.com

Ross,

The Charlotte-Mecklenburg Police Department has a very nice web page
that includes district maps and special unit information such as the
helicopter unit.

http://www.charmeck.nc.us/home.htm

Instructions:

Click on Public Safety
Click on Police Department
Click OK

Then select district information for the various Adam , Baker,
Charlie, or David districts. For example if you click on Adam 2
District Information, you get a map of the Adam 2 distirct.

Fire department stations and locations are under the Fire Department
section after you click on Public Safety.

hope this helps,

Joe

Message-ID: <3447D59C.2350@dg-rtp.dg.com>
Source record: 182881

I've had a BC100XLT for years and it's worked great. A few days ago, I left it out in the car overnight. I've done this many times before in the past without trouble. When I looked at it in the morning, there was black stuff inside the LCD display.

It appears that all segments are still working, but now they're partially obscured by this stuff on the inside of the glass.

Is there a cure for this? Can I get a new display?

More importantly since I'm considering a BC3000XLT, was it wrong to leave it outside? What's the safe storage and operating temperature ranges for scanners?

Not true, as has been covered here repeatedly. There are a number
of digital techniques in amateur use (and even more in commerical
and military use) which are more robust than OOK Morse. Those
techniques have displaced OOK Morse use in other radio services.
It is trivially true that OOK Morse is more robust than analog voice,
but that is *not* the only other method available to amateurs. And
those other techniques would tend to gain more acceptance among
amateurs if it were not for this pervasive myth about OOK Morse
superiority.

>As to whether it should be a requierment for a license, I

>bands! _ _ ... ..._ _

Exactly. No one is threatening to *ban* OOK Morse *usage*. There
will always be a place for it for those who wish to use it. But it should
be able to stand on its own merits and not uniquely enjoy a government
recruitment subsidy.

Looking for used scanners.

Unit can have any number of channels - hand held or base - older units or new (no crystal units). Must work flawlessly, have original accessories, and be in reasonably good cosmetic condition...original carton and manual would be nice, but not necessary.

Please describe the scanners features, operating condition and appearance in your reply, along with your asking price...

Thanks,

John & Robert
St. Louis, Mo. 63116

P.S. We can also trade ham gear instead of paying cash - if you're interested in a swap, inquire for list of equipment available.

I submit, because of the above attitude and mindset that you promote,
the incidents of interference from appliance operators who only watch
the dancing lights on their MFJ is increasing. Why do we see pleas
even from international operators, on the internet, in QST, etc.,
to desist from these despicable practices?

Also, it seems strange that you would take such as position when
on the other hand you describe these "Whizbang" modes as so robust
that you can get 100% copy even though they cannot be *heard by the
human ear*. Or are you saying that MORSE OOK is unique in that
anyone can tell if they're interfering by just listening and
not decoding? Is this the essence of your experience on HF?

I tend to buy things at Radio Shack. that are not made by Radio Shack. It
seems that most of the quality products sold there, are not actually made
by them. They either just have the Radio Shack "name" on them, or the
actual name. I once looked at their "top of the line" Optimus stereo
equipment, and was just shocked at how cheap it was made! Plastic is the
word here! Literally!

<< i only hear one
side of the conversation.This seams to be happening more and more lately.Does
any one know why this is happening? >>

Well, the advice I have for you is this: I have an older Cellular Bag type
phone, it was made around 1992, and when I use it and try to monitor my own
call, I only hear the party I'm talking to, and not my own voice. I think
that this was possible an effort to cut down on cellular interception on
scanners. My newer Motorola (R) DPC-550 Flip Phone transmits both sides, so
it may just be on some older models that this happens on. My other thought is
that you may be listening to the cellular tower's "input" frequency, which is
exacly 45 MHz lower than the tower "output" freq. If you REALLY want to
monitor a call and want to violate FCC regulations, you can hook up two
scanners, get one omni-directional antenna, and one high-gain directional
antenna, then monitor the tower "input" freq with the high-gain antenna on one
scanner, while listening to the tower output 45 MHz higher. Hope this helps.
Please keep in mind, *Cellular Interception is illegal*.

I work with the local newspaper and our scanner picks up what appears to be a cellular image on one of the frequencies that the 800 trucked system uses. Does anybody know a way to keep the scanner from picking up the image. It's a Radio Shack model, but I am not for sure which one. Any help would appreciated. Thanks in advance.

I guess the special offer is there, but it is pretty well hidden. I gave up looking for it on the USA website.

While Campus Radio Stations legally used this system for years (FM Signal) it has largely died out because of the losses due to transformers. In North America there seems to be one on every second pole, so the signal would not get very far.

A recent news story from England, though, gives new hope...sort of. A firm there has been experimenting with INTERNET via power lines. Just think of it!! The big problem was drop outs due to switching noise (as in light switch, fridge cutting in, etc.). They seem to have created a very robust error correction system to deal with that, though. However, in England, they use a whole lot fewer transformers. Some villages, may only have 4-5 transformers total.

Just thought it might be an interesting slant on your query.

Well lets see. For one, this is counter to what you and Carl badger
us continually with "those whizbang signals that are so terrific that
machines can make 100% copy even though no one hears them." For
another, this flies in light of the testimony on this very forum
by HF Whizbang mode operators admit that they do not listen to anything,
just see by the flashing or not flashing lights on their MFJ that
the frequency is clear. Why has this come about? I claim that,
in part, it occurs because of your influence in devaluing the
MORSE qso's in the eyes of gullible Whizbang operators to the extent
that it is OK if interference occurs. After all, they are being wiped
out by a more "superior" mode. Why do we have constant pleas in QST
to curb these despicable practices even from international operators
ie. interference of beacons, and weak signal Morse QSO's? Further,
I claim that because of this, HF digital is being slowly relegated to
a pariah mode and is having a chilling effect on its popularity.
How ironic if, because of your influence, digital becomes the "new"
obsolete mode.

>I'll bet the BATF is really enjoying this post, especially since the
>speed of sound at sea level is something like 720 FPS.

I realize that I'm using an old reference source, and that the physics
might have changed with better technology, but the 1989 World Almanac
reports the speed of sound at 1088 FPS at sea level at 32 degrees F.

Hmmm, but lets run with your numbers...

720 (FPS) x 60 (per min) x 60 (per hour) = 2,592,000 FPH

2,592,000 (FPH) / 5280 (FPmile) = 490.9 MPH

SPEED OF SOUND = 490.0 MPH

WOW! I thought it was much higher than that. Maybe someone
ought to call up those folks with the really fast car over on
Black Rock Desert and tell them they went closer to mach 1.5

Radio Shack can make their money selling computors, pagers, and two cent cellular phones. They don't need to care about old loyal customers anymore. Especially these scanner people who like to listen to others. Oh I bet some of these scanners can even listen to the two cent cellular phones on 800 mhz...there's not much profit in books anyway...

FROM WINRADIO HEADQUARTERS
Melbourne, Australia

Dear Radio Enthusiast:

Over the last few years, a bunch of USA and Australian scanner enthusiasts and radio amateurs joined forces in the design of a unique radio receiver. It became the world's first wide-band radio scanner to fit on a PC card and operate under Windows.

Against all the skepticism about computer noise and feasibility of such a device, the project was hugely successful - so successful that the jury of R&D Magazine awarded WiNRADiO its annual Most Significant Product of the Year in Philadelphia last year. WiNRADiO, also scored rave reviews in magazines such as Monitoring Times, Radio Communications, World Scanner Report, as well as on the CNET TV network.

WiNRADiO is now in widespread use, not only by VHF/UHF scanner enthusiasts (as it was primarily intended), but also by commercial, professional, defense, and security agencies world-wide.

The WiNRADiO receiver covers a frequency range of 0.5 to 1300 MHz (less cellular bands) and is put together by none other than the IBM plant in Wangarratta, Australia.

Having just introduced a new, advanced version of WiNRADiO which includes a spectrum analyzer with an exciting patented graphic tuning capability, we have decided to celebrate another successful year in the industry and offer you WiNRADiO direct from a manufacturer's rep, passing on the savings of the distribution costs and yet offer the significant benefit of reliable US-based support and service.

The USA list price is $585, however for a limited time, we can offer WiNRADiO direct from our USA representative for a substantial discount. This offer expires on December 31, 1997.

We trust that you will find WiNRADiO worthy of serious consideration.
On behalf of the WiNRADiO design team,

-= Michael Bisak Richard Collett Milan Hudecek Peter Nesbit =-

Corrected by who??? Tolerated by who??? Do you really think they are
trying to pass this legislation because of the outcry from people like
you and other average citizens. If so, I think it's quaint that people
still believe that.

> Listen to a private telephone call? Even the little children understand that
> this can not be right. And therefore such a "right" does not exist.

Cool, we get to the part where you are sadly mistaken and
well........wrong.
A cellular phone call (not telephone) is NOT private, or this discussion
wouldn't be taking place. Little children don't understand this, or
they would be called small adults. And therefore, we adults know that
this right exists. Anyone who owns a cellular phone and doesn't know
that people can easily listen to them has first called their own
intelligence into question, and second bought into the lies that cell

phone companies have so obviously spread. Hence their large amounts of cash behind this attempted legislation.

> Before this generation worries about the constitution being trampled, they
> need to understand the right use of the word "rights". Even your
> forefathers had such a grasp.

Which generation do you think is worried about this. I hope all of them are. I think Mr Goldstien needs to ascertain the difference between what is our right to listen to the public.......that's right.......public air waves, and what he thinks is our privelege granted to us by our wonderful government, the "crown jewel" of socialism that loves so much to control what we shoot, drink, smoke, worship, listen to, etc.

> I will periodically communicate with you further, but it is to your benefit
> to weigh these things in your hearts.

I wish you luck in your endeavor to come back from time to time to enlighten the lost souls. That is the problem. These things should be weighed in our brains, the organ of choice for thinking. I choose to leave the heart free to pump blood and house the Holy Spirit. <><

True digital and spread spectrum digital are the way to go. They
CANNOT be intercepted with a conventional scanner. Just as you note,
nothing is truely secure. But rest assured digital communication is
relatively safe. Be aware, when shopping for a digital phone read the
fine print. I've seen phones that say "digital security" but that
doesn't mean the actual voice communication between the handset and base
unit is converted to digital. What those refer to is the handset and
base unit recognize each other exclusively (via digital recognition) and
prevent another user with the same phone accessing your base unit and
making calls on your line. Let the buyer beware.
I personally have the V-Tech Tropez 900 DX digital phone, it's a good
choice but a bit pricey.

Regards,

Dean

Good luck

Vertically? Interesting, but I guess it makes sense. Would it give good
directional control? If so, how would I aim it at the transmitter? It's
not something I can really do by trial and error, since it's intermittent
broadcasts.

Ummm.... 1088 ft/s is a pretty good number. That is about 742 miles per hour. Probably the original poster meant the speed of sound was approximately 720 miles per hour???

Cleveland HamNet BBS has a file called scanner.lst that prints out to
about 35 pages of Cleveland area frequencies. BBS# (216) 942-6382.
I pulled this file from the web over a year ago and don't remember the
URL but the BBS number is still valid.

Source record: 182721

The trick is so simple! just turn the antenna vertical! I know someone is going to say the 50 to 75 ohm mismatch thing. Thats an swr of 1.5:1 and with the amount of spectrum you need to cover its not very important at all. Also 75 ohm line has a lower loss than 50 ohm to start with. It'll do a better job than anything you'll get for under $300.00...73

From what I understand, Spectrum is a compilation from FCC files. The
errors
you found are probably a result of errors in the original FCC files. I
don't think
anyone would actually re-enter all that data. As far as more advanced
queries,
